The Presence of Mind Daniel D. Hutto,1999 Will our everyday account of ourselves be vindicated by a new science Or will our self understanding remain untouched by such developments This book argues that beliefs and desires have a legitimate place in the explanation of action Eliminativist arguments mistakenly focus on the vehicles of content not content itself This book asks whether a naturalistic theory of content is possible It is argued that a modest biosemantic theory of intentional but nonconceptual content is the naturalist s best bet A theory of this kind complements connectionism and recent work on embodied and embedded cognition But intentional content is not equivalent to propositional content In order to understand propositional content we must rely on Davidsonian radical interpretation However radical interpretation is shown to be at odds with physicalism But if the best naturalised theory of content we are likely to get from cognitive science is only a theory of intentional content then a naturalistic explanation of scientific theorising is not possible It is concluded that cognitive science alone cannot explain the nature of our minds and that eliminativism is intellectually incoherent Series A

Cognitive Science Rom Harre,2002-02-15 Cognitive Science with its remarkable sweep of key themes past and present truly introduces the science of the mind for a new generation of psychology students This is the first major textbook to offer a truly comprehensive review of cognitive science in its fullest sense Ranging across artificial intelligence models and cognitive psychology through to recent discursive and cultural theories Rom Harre offers a breathtakingly original yet accessible integration of the field At its core this textbook addresses the question is psychology a science with a clear account of scientific method and explanation and their bearing on psychological research A pivotal figure in psychology and philosophy for many decades Rom Harre has turned his unmatched breadth of reference and insight for students at all levels Whether describing language categorization memory the brain or connectionism The book always links our intuitions about beliefs desires and their social context to the latest accounts of their place in computational and biological models Fluently written and well structured this an ideal text for students The book is divided into four basic modules with three
