

23 The Speech Community

PETER L. PATRICK

The speech community (SpCom), a core concept in empirical linguistics, is the intersection of many principal problems in sociolinguistic theory and method. I trace its history of development and divergence, survey general problems with contemporary notions, and discuss links to key issues in investigating language variation and change. I neither offer a new and correct definition nor reject the concept (both misguided efforts), nor exhaustively survey its applications in the field (an impossibly large task).

1 General Problems with Speech Community as a Concept

Every branch of linguistics that is concerned with representative samples of a population; that takes individual speakers or experimental subjects as typical members of a group; that studies *langue* as attributable to a socially coherent body (whether or not it professes interest in the social nature of that body); or that takes as primitive such notions as “native speaker,” “competence/performance,” “acceptability,” etc., which manifestly refer to collective behavior, rests partially on a concept equivalent to the SpCom. Linguistic systems are exercised by speakers, in social space: there they are acquired, change, are manipulated for expressive or communicative purposes, undergo attrition, etc. Whether linguists prefer to focus on speakers, varieties or grammars, the problem of relating a linguistic system to its speakers is not trivial.

In studying language change and variation (geographical or social), reference to the SpCom is inescapable, yet there is remarkably little agreement or theoretical discussion of the concept in sociolinguistics, though it has often been defined. Some examples from research reports suggest the degree of its (over-)extension (Williams 1992: 71).
