discussing plant pathogenic fungi for bioethanol and biodiesel production including their mechanisms of action Additionally this book reviews biofuel production using plant endophytic fungi wood rotting fungi fungal biocontrol agents and gut fungi and it investigates highly efficient fungi for biofuel production and process design in fungal based biofuel production systems Finally life cycle assessment of fungal based biofuel production systems are discussed in this volume Medicinal and Aromatic Plants of North America Ákos Máthé,2020-10-20 This volume is aimed at offering an insight into the present knowledge of the vast domain of Medicinal and Aromatic Plants with a focus on North America In this era of global climate change the volume is meant to provide an important contribution to a better understanding of the diverse world of Medicinal and Aromatic Plant research production and utilization Coffee Adriana Farah,2019-01-11 Coffee is one of the most popular drinks in the world but how does the production influence chemistry and quality This book covers coffee production quality and chemistry from the plant to the cup Written by an international collection of contributors in the field who concentrate on coffee research it is edited expertly to ensure quality of content consistency and organization across the chapters Aimed at advanced undergraduates postgraduates and researchers and accompanied by a sister volume covering how health is influenced by the consumption of coffee these titles provide an impactful and accessible guide to the current research in the field **Microbial-Mediated Induced Resistance: Interactive Effects for Improving Crop Health** Debasis Mitra,Bahman Khoshru,Anju Rani,Edappayil Janeeshma,2025-06-02 The current population of the Earth which is approximately 7.88 billion is projected to reach 9.8 billion by the year 2050 In order to accommodate this growth it is crucial that we prepare for the increased demand for food However the agricultural industry continues to rely heavily on chemical fertilizers pesticides and herbicides These practices have severe environmental consequences leading to a decline in the diversity of soil microorganisms which can ultimately harm food production This situation is further complicated by climate change deteriorating soil health and other stressors Here microbial mediated induced resistance MIR is an intriguing area of study in agriculture that explores the potential of microbes to sustain plant resistance to pathogens This methodology utilizes specific microorganisms including bacteria and fungi to trigger a systemic response in plants thus enhancing their defense mechanisms against disease The impact of MIR on crop health can be substantial and provide sustainable alternatives to conventional chemical based techniques for disease management Advancing research into the study of microbes in sustainable agriculture will generate interest in adopting novel methods that increase crop yield soil health and fertility Through this Research Topic we aim to showcase the most recent insights about plant soil microbes which play a significant role in microbial mediated induced resistance Specifically we are interested in the rhizospheric soil dynamics and nutrient acquisition contributing to plant growth and development Soil microbes are crucial for plant nutrient uptake inducing Induced Systemic Resistance and managing stressful climatic conditions through plant signaling compounds and crosstalk mechanisms Beneficial symbiotic microorganisms and other soil microbial interactions with plant roots help to utilize

nutrients efficiently and induce plant defense mechanisms for sustainable production Topics welcomed into this Research Topic Mechanisms of plant defense Induced Systemic Resistance by Beneficial Microbes Soil biodiversity and microbial community Phytohormone signaling pathways Soil nutrient dynamics and nutrients transport Arbuscular mycorrhizal fungi
