*Phonon Scattering in Condensed Matter* Humphrey Maris, 2012-12-06 The Third International Conference on Phonon Scattering in Condensed Matter was held at Brown University Providence Rhode Island from August 28 31 1979 The previous conferences in this series were held at Nottingham in 1975 and in France at Paris and Ste Maxime in 1972 Until about 15 years ago phonon scattering was studied almost exclusively by measurements of thermal conductivity This approach has the severe limitation that the result obtained for the phonon scattering rate is actually the average of the scattering for all of the phonons in the sample Thus no distinction can be made between phonons of different polarization direction of propagation or energy During the 1960 s several significant developments occurred The most important of these was the application by Von Gutfeld and Nethercot of the heat pulse method previously used only in liquid helium to the investigation of phonons in crystals This approach makes possible the study of the propagation and scattering of phonons of known polarization and propagation direction The early heat pulse experiments used phonon generators which produced phonons having a broad distribution of energies and in addition the phonon detectors were sensitive to phonons of all energies **Phonon**

Döttinger, 2012-12-06 This volume contains the proceedings of the Fourth International Conference on Phonon Scattering in Condensed Matter held from August 22 26 1983 at the University of Stuttgart The preceding conferences were organized at Saint Maxime and Paris in 1972 at the University of Nottingham in 1975 and at the Brown University Providence Rhode Island in 1979 The Stuttgart conference like the preceding conferences was mainly concerned with propagating high frequency acoustic phonons mechanical waves and heat up to the lattice limiting frequency Lattice dynamics optical phonons phase transitions etc were included as far as they are involved in acoustical phonon scattering propagation and generation In this context the conference covered all aspects of acoustical phonon physics especially generation of phonons propagation scattering and detection Since acoustic phonons participate in most energy transfer processes in solids and liquids the field of interest is growing rapidly Therefore exciting new developments of acoustic phonon physics could be presented at the Stuttgart conference as well as important progress with respect to well known problems as for example the Kapitza resistance Two hundred and six scientists from 21 countries attended the conference Thirteen invited papers and 105 contributed papers with 34 as posters were presented The discussions are included in this volume A discussion session on large wave vector phonons was organized and chaired by V Narayanamurti A discussion session on phonon scattering at interfaces was organized and chaired by R O Pohl **Phonon Scattering in Condensed Matter** Wolfgang Eisenmenger, Kurt Lassmann, Siegfried Döttinger, 1984 **Phonon Scattering in Condensed Matter** International Conference on Phonon Scattering in C, 1980 [Phonon Scattering in Condensed Matter VII](#) Michael Meissner, Robert O Pohl, 1993-04-29 **Phonon Scattering in Condensed Matter** Wolfgang

the concept of delocalized states by elementary excitations The development of solid state theory within the last ten years has shown that by a systematic introduction of these concepts large parts of the theory can be described in a unified way This form of description gives a pictorial formulation of many elementary processes in solids which facilitates their understanding
