Phospholipid Biosynthesis:

Phospholipid Biosynthesis Edward A. Dennis, Dennis E. Vance, 1992 This volume provides up to date information on the purification and characterization of the enzymes involved in phospholipid biosynthesis and on the mechanisms utilized by cells for the transfer of phospholipids It also includes protocols for generating phospholipid biosynthetic mutants

Biochemistry of Lipids, Lipoproteins and Membranes Neale Ridgway, Roger McLeod, 2008-03-14 Research on the biochemistry and molecular biology of lipids and lipoproteins has experienced remarkable growth in the past 20 years particularly with the realization that many different classes of lipids play fundamental roles in diseases such as heart disease obesity diabetes cancer and neurodegenerative disorders The 5th edition of this book has been written with two major objectives The first objective is to provide students and teachers with an advanced up to date textbook covering the major areas of current interest in the lipid field The chapters are written for students and researchers familiar with the general concepts of lipid metabolism but who wish to expand their knowledge in this area The second objective is to provide a text for scientists who are about to enter the field of lipids lipoproteins and membranes and who wish to learn more about this area of research All of the chapters have been extensively updated since the 4th edition appeared in 2002 Represents a bridge between the superficial coverage of the lipid field found in basic biochemistry text books and the highly specialized material contained in scientific review articles and monographs Allows scientists to become familiar with recent developments related to their own research interests and will help clinical researchers and medical students keep abreast of developments in basic science that are important for subsequent clinical advances Serves as a general reference book for scientists studying lipids lipoproteins and membranes and as an advanced and up to date textbook for teachers and students who are familiar with the basic concepts of lipid biochemistry

Phospholipid Metabolism in Cellular Signaling Jose M.

Mato, 1990-11-12 Phospholipids are no longer considered exclusively as the building blocks of biomembranes but are now regarded to be exceptionally important to cellular signalling Another conclusion resulting from studies over the past several years is that no single general scheme for the role of phospholipids during cell activation can be drawn as representative of all cells Phospholipid Metabolism in Cellular Signaling presents a comprehensive view of the recent advances made in certain major research areas within the field of phospholipid metabolism in cellular signalling Topics discussed within this volume include lipid composition of cellular membranes and their organization in biological systems the dynamic aspects of

phospholipid metabolism and its regulation by extracellular stimuli and the role of newly discovered glycosyl phosphatidylinositols in insulin action The book also discusses two biologically active phospholipids the sphingolipids and ether linked glycerophospholipids the platelet activating factor Phospholipid Metabolism in Cellular Signaling is an important research reference that should be considered required reading by all scientists and graduate students working on cell activation e g growth factors hormones and oncogenes

Biochemistry of Lipids, Lipoproteins and Membranes Dennis E. Vance, J.E. Vance, 1996-08-06 This is the third edition of this advanced textbook written with two major objectives in mind One is to provide an advanced textbook covering the major areas in the fields of lipid lipoprotein and membrane biochemistry and molecular biology The second objective is to provide a clear summary of these research areas for scientists presently working in these fields The volume provides the basis for an advanced course for students in the biochemistry of lipids lipoproteins and membranes The book will satisfy the need for a general reference and review book for scientists studying lipids proteins and membranes Excellent up to date reviews are available on the various topics covered A current readable and critical summary of these areas of research it will allow scientists to become familiar with recent developments related to their own research interests and will help clinical researchers and medical students keep abreast of developments in basic science that are important for subsequent clinical advances

Lipids in Photosynthesis: Structure, Function and Genetics Paul-André Siegenthaler, N. Murata, 2006-04-11 Lipids in Photosynthesis provides readers with a comprehensive view of the structure function and genetics of lipids in plants algae and bacteria with special emphasis on the photosynthetic apparatus in thylakoid membranes This volume includes the historical background of the field as well as a full review of our current understanding of the structure and molecular organization of lipids and their role in the functions of photosynthetic membranes The physical properties of membrane lipids in thylakoid membranes and their relationship to photosynthesis are also discussed Other topics include the biosynthesis of glycerolipids and triglycerides reconstitution of photosynthetic structures and activities with lipids lipid protein interactions in the import of proteins into chloroplasts the development of thylakoid membranes as it relates to lipids genetic engineering of the unsaturation of membrane glycerolipids with a focus on the ability of the photosynthetic machinery to tolerate temperature stress and the involvement of chloroplast lipids in the reactions of plants upon exposure to stress This book is intended for a wide audience and should be of interest to advanced undergraduate and graduate students and to researchers active in the field as well as to those scientists whose fields of specialization include the biochemistry physiology molecular biology biophysics and biotechnology of membranes

Phospholipid Metabolism in Apoptosis Peter J. Quinn, Valerian E. Kagan, 2006-04-18 The last few years have witnessed an explosion of both interest and knowledge about apoptosis the process by which a cell actively commits suicide The number of publications on the topic has increased from nothing in the early 1980s to more than 10 000 papers annually today It is now well recognized that apoptosis is essential in many aspects of normal development and is required for maintaining tissue

homeostasis The idea that life requires death seems somewhat paradoxical but cell suicide is essential for an animal to survive For example without selective destruction of non self T cells an animal would lack immunity Similarly meaningful neural connections in the brain are whittled from a mass of cells Further developmental cell remodeling during tissue maturation involves programmed cell death as the major mechanism for functional and structural safe transition of undifferentiated cells to more specialized counterparts Apoptosis research with roots in biochemistry developmental and cell biology genetics and immunology embraces this long ignored natural law Failure to properly regulate apoptosis can have catastrophic consequences Cancer and many diseases AIDS Alzheimer s disease Parkinson s disease heart attack stroke etc are thought to arise from deregulation of apoptosis As apoptosis emerges as a key biological regulatory mechanism it has become harder and harder to keep up with new developments in this field

Biochemistry of Lipids, Lipoproteins and Membranes J.E. Vance, Dennis E. Vance, 1991-12-17 The second edition of this book on lipids lipoprotein and membrane biochemistry has two major objectives to provide an advanced textbook for students in these areas of biochemistry and to summarise the field for scientists pursuing research in these and related fields Since the first edition of this book was published in 1985 the emphasis on research in the area of lipid and membrane biochemistry has evolved in new directions Consequently this second edition has been modified to include four chapters on lipoproteins Moreover the other chapters have been extensively updated and revised so that additional material covering the areas of cell signalling by lipids the assembly of lipids and proteins into membranes and the increasing use of molecular biological techniques for research in the areas of lipid lipoprotein and membrane biochemistry have been included Each chapter of the textbook is written by an expert in the field but the chapters are not simply reviews of current literature Rather they are written as current readable summaries of these areas of research which should be readily understandable to students and researchers who have a basic knowledge of general biochemistry The authors were selected for their abilities both as researchers and as communicators In addition the editors have carefully coordinated the chapters so that there is little overlap yet extensive cross referencing among chapters

Higher Plant Cell Respiration R. Douce, D.A. Day, 2012-12-06 I am honored by the editor's invitation to write a Preface for this volume As a member of an older generation of plant physiologists my lineage in plant respiration traces back to F F BLACKMAN through the privilege of having M THOMAS and W O JAMES two of his students as my mentors How the subject has changed in 40 years In those dark ages B 14C most of the information available was hard won from long term experiments using the input output approach Respiratory changes in response to treatments were measured by laborious gas analysis or by titration of alkali from masses of Pettenkofer tubes the Warburg respirometer was just beginning to be used for plant studies by pioneers such as TURNER and ROBERTSON Nevertheless the classical experiments of BLACKMAN with apples had led to important results on the relations between anaerobic and aerobic carbohydrate utilization and on the climacteric and to the first explicit concept of respiratory control of respiration imposed by the organization resistance of cell structure THOMAS extended this approach in his investigations of the Pasteur effect and the induction of aerobic fermentation by poisons such as cyanide and high concentrations of CO JAMES began a long 2 series of studies of the partial reactions of respiration in extracts from barley and YEMM S detailed analysis of carbohydrate components in relation to respiratory changes added an important new dimension
