 Carder, 2013-04-17 The aim of the present book has been to provide an outline the first of its kind of the history of the human
 efforts to map the topography of the surface of our satellite from the days of pre telescopic astronomy up to the present
 These efforts commenced modestly at the time when the unaided eye was still the only tool at the disposal of men interested
 in the face of our satellite and were continued since for more than three centuries by a small band of devoted friends of the
 Moon in several countries Many of these were amateur astronomers and almost all were amateur cartographers though some
 highly skilled in their art The reader interested in the history of lunar mapping between 1600 and 1960 will find its outline in
 the first chapter of this book and can follow the way in which the leadership in the mapping of the Moon the cradle of which
 stood in Italy passed successively to France Germany and eventually to the United States All efforts described in this chapter
 were wholly superseded by subsequent developments since 1960 largely motivated by logistic needs of a grand effort which
 culminated with repeated manned landings on the Moon between 1969 1972 a feat which will remain for ever one of the
 glories of our century
