It tells the true stories of the 46 pioneers who did most to master the art of celestial photography as it was known during its early days and whose efforts have made it possible for us to see the many magnificent pictures of the Universe featured in books, magazines and on the internet. In its TWO magnificent volumes is contained an unbelievable collection of tales of adventure, adversity and ultimate triumph and tells the uplifting stories of this small band of ordinary men and women who did such extraordinary things overcoming obstacles as diverse as war, poverty, cholera, death, very unfriendly cannibal natives and even exploding donkeys. Also covered in this book are more contemporary cosmological ideas, constellation representations and cartographic advances. The text is enriched with 226 images, 141 in color from actual antiquarian celestial books and atlases, each one with an explanation of unique astronomical and cartographic features. This never before available hardcover edition includes two new chapters on pictorial style maps and celestial images in art as well as over 50 new images. The Cambridge Photographic Atlas of Galaxies Michael König, Stefan Binnewies, 2017-09-07. Galaxies, the Milky Way's siblings, offer a surprising variety of forms and colours. Displaying symmetrical spiral arms, glowing red nebulae or diffuse halos, even the image of a galaxy can reveal much about its construction. All galaxies consist of gas, dust, and stars, but the effects of gravity, dark matter, and the interaction of star formation and stellar explosions all influence their appearances. This volume showcases more than 250 of the most beautiful galaxies within an amateur's reach and uses them to explain current astrophysical research. It features fantastic photographs, unique insights into our knowledge, tips on astrophotography, and essential facts and figures based on the latest science. From the Andromeda Galaxy to galaxy clusters and gravitational lenses, the nature of galaxies is revealed through these stunning amateur photographs. This well-illustrated reference atlas deserves a place on the bookshelves of astronomical imagers, observers, and armchair enthusiasts.

Of Stars and Men Zdenek Kopal, 2017-10-02. The twentieth century has been a remarkable epoch in the affairs of men, and this is no less true of astronomy at once the oldest and most modern of the sciences. Sky watchers at the beginning of the century measured positions and predicted celestial motions in faithful but uninspired homage to the Muse Urania; nowadays their descendants call on all the resources of modern science to probe the nature and evolution of a bewildering range of celestial objects. Man has even set out to call personally on his nearest neighbours in space. Professor Zdenek Kopal has lived and practised astronomy throughout this efflorescence of his subject. Born in Czechoslovakia just before the outbreak of the Great War and educated in the classical European tradition, he knows well the days when scholars commanded such respect that astronomical congresses would be visited by Heads of State. Yet within his own lifetime he has himself been recruited to play an important role in scientific preparations for a manned Moon landing. He has known and worked with some of the most highly respected practitioners of Modern Astronomy: Russell Shapley, Urey in the United States; Eddington in Britain. His fine eye for detail coupled with his strong sense of history enable

him to unfold through his personal recollections the development of his subject across the social changes of two world wars Inspired by his grandfather who would think nothing of walking sixty miles to theatrical performance the young Kopal acquired a Wanderlust that has taken him in his career more than a dozen times round the world He has visited the most ancient observatories observed solar eclipses in Japan and Java helped to establish new institutions in Iraq and India and commuted for many years between the Old and New Worlds He has toiled in every corner of his chosen vinyard as observer outstanding theoretician populariser editor and teacher During his thirty years as Professor of Astronomy at Manchester he

Decoding the Stars: A Biography of Angelo Secchi, Jesuit and Scientist Ileana Chinnici, 2019-06-17 Winner of the 2021 Donald E Osterbrock Book Prize for Historical Astronomy In *Decoding the Stars* Ileana Chinnici offers an account of the life of the Jesuit scientist Angelo Secchi 1818 1878 In addition to providing an invaluable account of Secchi's life and work something that has been sorely lacking in the English language scholarship this biography will be especially stimulating for those interested in the evolution of astrophysics as a discipline from the nineteenth century onward Despite his eclecticism reminiscent of the natural philosophers of the seventeenth and eighteenth centuries Secchi was in many ways a very modern scientist open to innovation and cooperation and a promoter of popularization and citizen science Secchi also appears fully inserted in the cultural context of his time he participated in philosophical and scientific debates spread new theories and ideas but also suffered the consequences of political events that marked those years and impacted on his life and activities
