Strategic Management Accounting, Volume III Vassili Joannidès de Lautour, 2019-10-16 This book responds to key issues in strategic management control by studying the interplay between ethics social and environmental performance and governance Grounded in research but written with practitioners and students in mind it addresses the most up to date issues pertaining to ethical insights into management accounting and accountability Drug Delivery in Oncology, 3 Volume Set Felix Kratz, Peter Senter, Henning Steinhagen, 2011-11-30 In this first authoritative overview on modern cancer chemotherapy 121 international specialists have contributed their experience and recent data for what is likely to become the gold standard in the field The authors summarize knowledge gained over the past decade from basic concepts to successful applications in the clinic covering active and passive targeting strategies as well as tissue specific approaches All current and future targeted delivery systems are discussed from ligand based to antibody based polymer based systems right up to micro and nanoparticulate systems A special section covers the delivery of nucleic acid therapeutics such as siRNA miRNA and antisense nucleotides In each case a description of the basic technique is followed by a discussion of the latest preclinical and clinical developments in the field By virtue of its clear and didactic structure rich illustrative material and summary chapters this handbook and ready reference enables the efficient transfer of knowledge between different disciplines from basic research to the clinician and vice versa It is equally well suited for professionals researchers and students in medical oncology and cancer biology and is also excellent for teaching medical students the foundations of 21st century cancer chemotherapy **Picosecond Phenomena II** R. Hochstrasser, W. Kaiser, C. V. Shank, 2012-12-06 The second international conference on the subject of Picosecond Phenomena was held June 18 20 1980 in Cape Cod Massachusetts Scientists from a broad range of disciplines were brought together to discuss their common interest in ultrafast processes This meeting was organized as a Topical Meeting of the Optical Society of America and was attended by 250 participants The conference reviewed the latest advances in the experimental and theoretical understanding of phenomena that occur on a picosecond timescale New discoveries in electronics chemical dynamics solid state physics and picosecond optics highlighted the interactions between chemists physicists biologists and engineers who attended the conference The enthusiasm generated by the rapid progress in the last two years and the pleasant Cape Cod weather resulted in a successful and enjoyable conference The conference owes a special thanks to Dr Jarus Quinn Joan Connon and their colleagues at the Optical Society of America for doing a superb job in implementing the meeting arrangements and to the program committee for the selection and organization of the technical presentations We gratefully acknowledge the financial support from the National Science Foundation Office of Naval Research the U S Army Research Office and the AFOSR Laser Applications in Surface Science and Technology Horst-Günter Rubahn, 1999-03-17 Lasers are becoming increasingly important in surface science both for the diagnostic evaluation and the processing of surfaces for example higher harmonic generation for diagnosis and the

widespread use of laser surface microstructuring and annealing for processing The physics behind such applications might be described in some cases by simple heating and melting processes but can also include much more complex phenomena such as plasma generation or elementary collective surface excitations Laser Applications in Surface Science and Technology provides an overview of the different techniques discusses the principles behind them and gives a concise description of laser induced and laser detected processes on surfaces Recent developments in the field such as nonlinear surface spectroscopies and the interactions of ultrashort pulses with materials are also introduced Invaluable reading for postgraduate students and research scientists across a wide range of disciplines including physics chemistry electronic engineering and materials science

Lasers and Optical Fibers in Medicine Abraham Katzir,2012-12-02 The increasing use of fiber optics in the field of medicine has created a need for an interdisciplinary perspective of the technology and methods for physicians as well as engineers and biophysicists This book presents a comprehensive examination of lasers and optical fibers in an hierarchical three tier system Each chapter is divided into three basic sections the Fundamentals section provides an overview of basic concepts and background the Principles section offers an in depth engineering approach and the Advances section features specific information on systems and biophysical parameters All those interested in the fields of lasers and fiber optics will find this book fascinating and instructive reading

Bioelectrochemistry II G. Milazzo,2013-03-07 This book contains the lectures of the second course devoted to bioelectro chemistry held within the framework of the International School of Biophysics In this course another

very large field of bioelectrochemistry i.e. the field of Membrane Phenomena was considered which itself consists of several different but yet related subfields Here again it can be easily stated that it is impossible to give a complete and detailed picture of all membrane phenomena of biological interest in a short course of about one and half week Therefore the same philosophy as the one of the first course was followed to select a series of lectures at postgraduate level giving a synthesis of several membrane phenomena chosen among the most important ones These lectures should show the large variety of membrane regulated events occurring in living bodies and serve as sound interdisciplinary basis to start a specialized study of biological phenomena for which the investigation using the dual approach physico chemical and biological is unavoidable Since as already mentioned it was impossible to exhaust even roughly in a short course like this the presentation and introductory treatment of the extremely large variety of membrane phenomena it can be expected that the third course will continue the subject of membrane phenomena deepening some ones presented in this course and introducing some new ones

vii CONTENTS Symbols and acronyms IX Opening address G MILAZZO 1 Structure of biological membranes and of their models I J A HAYWARD et al Biomedical Photonics Handbook, 3 Volume Set Tuan Vo-Dinh, 2014-07-29 This handbook presents the most recent technological advances and applications in the areas of biomedical photonics This second edition contains introductory material and covers the state of the art methods and instrumentation for biomedical photonic technologies It integrates interdisciplinary research and development critically needed for scientists engineers manufacturers teachers students and clinical providers to learn about the most recent advances and predicted trends in instrumentation and methods as well as clinical applications in important areas of biomedical photonics Extensive references are provided to enhance further study Excitations in Two-Dimensional and Three-Dimensional Quantum Fluids A.F.G. Wyatt, H.J. Lauter, 2012-12-06 The study of quantum fluids in three dimensions has been an important area for many years as it embraces Bose Einstein condensation superfluidity and macroscopic quantisation These are fundamental aspects of physics which can be studied in liquid ^4He In contrast quantum fluids in two dimension is more recent and less developed Nevertheless it has shown many interesting phenomena including a rich variety of phases and the Kosterlitz Thouless transition Intermediate between these dimensions are the restricted geometries of micro porous materials into which He may be introduced The main quantum materials considered are ^4He ^3He D_2 H_2 H and electrons on the surface of ^4He The superfluid phases of ^3He were excluded except for superfluid film flow as ^3He involves a separate set of problems These proceedings arise from a lively Advanced Research Workshop on Excitations in Two Dimensional and Three Dimensional Quantum Fluids held in Exeter 10-15 August 1990 Fifty scientists took part and each provided a written contribution Perhaps it is a testimony to the discussions that several papers were revised by the authors after the meeting The order of the chapters is the same as the presentations at the workshop This arrangement starts with ^4He in three dimensions which establishes a base from which the two dimensional properties can be viewed At the end of each section there is a report on

the discussion session These are interesting and useful chapters as they clarify points made in the papers and define the boundary of current understanding

Physics of Bioenergetic Processes L. A. Blumenfeld, 2012-12-06 According to its definition synergetics is concerned with the cooperation of individual parts of a system that produces macroscopic temporal spatial or functional structures A good deal of the volumes published within this series dealt with the formation of truly macroscopic structures which we can see with our eyes A common scheme could be developed to understand the formation of many patterns through self organization In particular we have to use concepts which go beyond conventional thermodynamics New ideas became crucial We have to study kinetic processes and often few highly excited degrees of freedom play the decisive role in the evolution of structures Over the past years it has turned out that quite similar lines of approach apply to a world which at first sight would be classified as microscopic That world consists of processes in which biomolecules are involved An important example for the problems occurring there is provided by Manfred Eigen's theory of evolution of life at the molecular level of his contribution to Volume 17 of this series Another important example has been provided by Blumenfeld's book on problems of biological physics Vol 7 of this series There it was proposed to treat biological molecules as machines which in a certain sense work through macroscopic degrees of freedom

Laser Systems for Photobiology and Photomedicine Arthur N. Chester, S. Martellucci, A.M. Verga Scheggi, 2012-12-06 This volume contains the Proceedings of a two week NATO Advanced Study Institute on Laser Systems for Photobiology and Photomedicine conducted from May 11 to 20 1990 in Erice Italy This is the 15th annual course of the International School of Quantum Electronics ISQE organized under the auspices of the Ettore Majorana Center for Scientific Culture The application of lasers to medicine and surgery has made amazing progress since the last ISQE Course on this subject in 1983 The present Proceedings give a tutorial introduction to today's most important areas as well as a review of current results by leading researchers Among the possible approaches to a NATO Advanced Study Institute on Laser Systems for Photobiology and Photomedicine we chose to emphasize the scientific and technological aspects of advanced laser systems when applied to laboratory and clinical tests Since it is the policy of the School to stress the advanced scientific and technological achievements in the field of Quantum Electronics the Course broadly covers performance already achieved and potential applications

Psoralen Dna Photobiology Francis P. Gasparro, 2018-01-18 In one form or another psoralens have been in use dating back to biblical times for the treatment of depigmented patches of skin However it has only been in the past 40 years that the structure and function of psoralens have been elucidated Although several volumes have been published on photobiology and photomedicine no one volume has ever been devoted to the psoralen photobiology In these two volumes we focus on the properties and uses of photoactivated psoralens In these volumes the various aspects of psoralens are presented in a review of the field as it stands in mid 1986 In retrospect we may find that this particular time was crucial in the development of new therapeutic modalities as many of the applications of modern molecular biology are beginning to impact on the practice of medicine This book was written with two purposes in mind First to serve as an update the last collective review of the field was in 1982 Second it is hoped that newcomers to the fields of photobiology and photomedicine both scientists and clinicians would find it a useful introduction
