Brown, Jane Showacre, 1977 Photobiological data from other species indicate that light can be both beneficial and detrimental to many biological processes The time has come to evaluate the risk benefit ratio of this modality of therapy for hyperbilirubinemia of the neonate There has been little thus far to indicate immediate hazards from this form of therapy but long term sequelae have not been adequately assessed A review of the experience of the past 15 17 years with this agent was thought to be useful In April 1974 the Pregnancy and Infancy Branch of the National Institute of Child Health and Human Development sponsored a conference to assess the photobiological processes involved in phototherapy as well as to document the long term clinical experience of clinicians from all parts of the world who have used light in the treatment of hyperbilirubinemia since 1958 The papers and discussions presented in this book by distinguished investigators from the clinical and basic sciences illustrate not only the breadth of the problem but also the value of an interdisciplinary approach to its resolution Perspectives of Biophysical Ecology D.M. Gates, R.B. Schmerl, 2012-12-06 A symposium on biophysical ecology was held at The University of Michigan Biological Station on Douglas Lake August 20 24 1973 Biophysical ecology is an approach to ecology which uses fundamental principles of physics and chemistry along with mathematics as a tool to understand the interactions between organisms and their environment It is fundamentally a mechanistic approach to ecology and as such it is amenable to theoretical modeling A theoretical model applied to an organism and its interactions with its environment should include all the significant environmental factors organism properties and the mechanisms that connect these things together in an appropriate organism response The purpose of a theoretical model is to use it to explain observed facts and to make predictions beyond the realm of observation which can be verified or denied by further observation If the predictions are confirmed the model must be reasonably complete except for

second or third order refinements If the pre dictions are denied by further observation one must go back to the basic ideas that entered the model and decide what has been overlooked or even what has been included that perhaps should not have been Theoretical modeling must always have recourse to experiment in the laboratory and observation in the field For plants a theoretical model might be formulated to explain the manner and magnitude by which various environmental factors affect leaf temperature Nuclear Science Abstracts ,1975 **UV-B Radiation and Plant Life** Brian R Jordan,2017-10-11

Ultraviolet B radiation UV B has profound effects on plant growth and development and exposure varies with ozone depletion and across geographic regions with ecosystem and agricultural consequences This book deals with large scale impacts but also how UV B affects plants at the molecular level is also fascinating and the UV B photoreceptor has only recently been characterised While UV B radiation can be damaging it also has a more positive role in plant photomorphogenesis Consequently UV B treatments are being developed as innovative approaches to improve horticulture This book is a timely synthesis of what we know and need to know about UV B radiation and plants **Photochemical and Photobiological Reviews** Kendric Smith,2012-12-06 1 Biological Photochemical and Spectroscopic Applications of Lasers 2 Photochemistry of the Nucleic Acids 3 Ultraviolet Radiation Effects on the Human Eye 4 Lethal and Mutagenic Effects of Near Ultraviolet Radiation 5 DNA Repair Enzymes in Mammalian Cells *Advances in Microbial Physiology* ,1977-12-13 Advances in Microbial Physiology Cumulated Index Medicus ,1973 **Photophysiology** Arthur C. Giese,1970 Environmental Pollution and Plant Responses Shashi Bhushan Agrawal,Madhoolika Agrawal,2023-01-30 Comprehensive and global in scope Environmental Pollution and Plant Responses provides an analysis of the research on the factors contributing to the deteriorating environmental quality and its effect on plant performance The issues include environmental pollution and global climate change response patterns of plants at different levels mechanisms of interaction tolerance strategies and future research prospects The author evaluates trends and gives management strategies for abating the problem This volume highlights the complexities of environmental problems and the affect of pollution on every level of the ecosystem
