Phylogenetic System Of Ephemeroptera:

The Phylogenetic System of Ephemeroptera Nikita Kluge, 2013-11-27 The book has general biological significance due to usage of the new non ranking nomenclature and the rational layout of taxonomic text which can be qualified as post Linnaean systematics While after the works by Lameere and Hennig non ranking classifications became widely used this book represents the first experience of consistently non ranking classification including taxa of low taxonomic level i e taxa traditionally regarded as genera families et al In contrast to other recent attempts to elaborate a non ranking nomenclature not contradictory to the International Code of Zoological Nomenclature this one appears to be successful and can be applied to any zoological taxa although its application in botany could be possible only after further elaboration Biology is currently going through a crisis which causes some investigators to use such non scientific methods of reconstructing phylogeny as parsimony analysis The author believes that the new method of phylogeny description and reconstruction used in this book will help indicate a way out of this crisis

Reproductive Strategies in Insects Omkar, Geetanjali Mishra, 2022-02-15

Reproduction is one of the most inherent tasks that all living organisms are actively involved in. It forms the backbone of their existence with all evolutionary energies directed over billion years of creation into maximizing reproductive effort. For so simple and directed a need such as maximizing reproduction it is interesting to see how much diversity and complexity exists in this task. Each organism despite having the same end goal employs different strategies. The complexities, intricacies and strategies of successful reproduction while being extremely fascinating are equally befuddling. *Reproductive Strategies in Insects* provides an expansive critical look at the reproductive strategies of the most diverse group of animals, the insects. Insects which inhabit myriad niches in all ecosystems except the oceans show the most diverse reproductive strategies ranging from simplest to most complex. Reproductive strategies viz search for mates, number of mates, display of mate quality, assessment of mate quality, acceptance of mate, rejection of mates, forced copulations, the fight for paternity pre and post copula, the modulation of paternity, ovipositional strategies and parental care are described in detail in this book. Also, each strategy is analyzed in relation to its morphological, physiological, ethological, ecological and evolutionary aspects. Features: Covers a wide variety of reproductive strategies. A detailed step by step description of reproductive strategies. Discusses morphological, physiological, ethological, ecological and evolutionary aspects. Modulation of these strategies and responsible modulatory factors are also discussed. Well illustrated. Recent research results and probable future research directions. This is a niche reference book for ethologists, biologists studying behavioural evolution and entomologists. It may also be used as a textbook for a graduate level course in behaviour.

Multicellular Animals

Peter Ax, 2013-03-09. Those who wish for permanence in classification must pay the price of stasis as if for ever condemned to confound whales with fish. M. T. Ghiselin 1981 p 283. Scientific argument is a debate concerned with the solution of unresolved problems. Before continuing with the phylogenetic system of the Metazoa this foreword gives me the opportunity to discuss some controversial questions to state selected positions more precisely and to remedy omissions. I would like to draw special attention to serious problems for phylogenetic systematics resulting from the inevitable confrontation with the current rules of nomenclature. 1. In carrying out this debate I hope not to lose the goodwill of those readers who are experts. Within the first few pages a textbook for students. Critics who ask that question and answer in the negative probably underestimate the open mindedness of young people who are not troubled by or can easily free themselves from the restraints and arbitrariness of traditional classifications and to whom systematics is offered as a scientific product in such a form that arguments for every single decision are comprehensible and checkable and can therefore be fully analyzed.
