

# RADAR CROSS SECTION

Radar cross section (RCS) is a measure of how detectable an object is by radar. Radar cross-section depends on several key factors, including the size, shape, material, and radar wavelength of the target.

Radar Cross Section Measurements Eugene F. Knott, 2012-12-06 The original campus of the University of Michigan was nearly a perfect square about a half mile along a side A street sized walk appropriately called the Diag runs diagonally across this square connecting its southeast and northwest corners In 1904 a new engineering building was either started or finished I do not remember which to house classrooms When another engineering building was built on the expanded campus across the street from it many years later the old building came to be known as West Engine to distinguish it from the new East Engine Old West Engine is or maybe by now was a four story L shaped structure that stood at the southeast corner of the original campus It was built with an arch in it to straddle the Diag at the apex of the L You walked over the Engineering Arch to get from one leg of the L to the other if you were inside the building and you walked under it when you entered the campus from the southeast corner Affixed to the masonry wall of the arch was a plaque I often noted in passing It bore a quote attributed to Horace Greeley 1811 1872 who I did not know at the time was the founder editor and publisher of the New York Tribune It said simply Young man when theory and practice differ use your horse sense The suggestion seems worthy of an exclamation point instead of a period but I do not remember if it had one      **Radar Cross Section** Eugene F. Knott, John F. Schaeffer, Michael T. Tulley, 2004-06-30 The leading text and reference on radar cross section RCS theory and applications this work presents a comparison of two radar signal strengths One is the strength of the radar beam sweeping over a target the other is the strength of the reflected echo sensed by the receiver This book shows how the RCS gauge can be predicted for theoretical objects      *Radar Cross Section Lectures*, 1984      *Radar Cross Section Handbook* George T. The design and development of low radar cross section RCS phased array has been a challenging subject in stealth technology. The frequency selective surface elements act as absorbers in specific frequency band and facilitate gain enhancement and reduction of antenna RCS. This book presents a comprehensive EM design and analysis of such low profile patch arrays with high impedance surface based ground plane. It explains how to determine radiation mode RCS of low profile antenna arrays with arbitrary configurations. Detailed descriptions of design workflow of determining radiation and scattering behavior of antenna arrays have been supported with schematics tables and illustrations. Aimed at engineers and researchers for RCS antenna engineers and graduate students in electrical engineering and electromagnetics it discusses both radiation and scattering features of both planar and conformal HIS based low profile antennas. Describes the theoretical background design simulations and analysis of low RCS phased array in detail. Presents the physics behind the resultant radiation and scattering characteristics of designed antenna array. Helps readers understand design and analysis of low RCS antenna array without any degradation in its radiation performance. Includes figures schematics and illustrations to provide comprehensive descriptions of both radiation and scattering characteristics of phased arrays of different configurations.

With this book practitioners responsible for analyzing specifying or evaluating RCS imaging systems will be able to define performance limits using basic physical and mathematical principles. Information on instrumentation systems for acquiring data and two new chapters on applications of new techniques are included. The emphasis of the book is on imaging as applied to radar cross section measurements. With it the reader will learn how to use the latest techniques to perform RCS imaging in laboratory or outdoor test ranges. This book is suitable for self study or for use in a short course for practising engineers.

**Plasma-based Radar Cross Section Reduction** Hema Singh, Simy Antony, Rakesh Mohan Jha, 2015-09-30

This book presents a comprehensive review of plasma based stealth covering the basics methods parametric analysis and challenges towards the realization of the idea. The concealment of aircraft from radar sources or stealth is achieved through shaping radar absorbing coatings engineered materials or plasma etc. Plasma based stealth is a radar cross section RCS reduction technique associated with the reflection and absorption of incident electromagnetic EM waves by the plasma layer surrounding the structure. A plasma cloud covering the aircraft may give rise to other signatures such as thermal acoustic infrared or visual. Thus it is a matter of concern that the RCS reduction by

plasma enhances its detectability due to other signatures This needs a careful approach towards the plasma generation and its EM wave interaction The book starts with the basics of EM wave interactions with plasma briefly discuss the methods used to analyze the propagation characteristics of plasma and its generation It presents the parametric analysis of propagation behaviour of plasma and the challenges in the implementation of plasma based stealth technology This review serves as a starting point for the graduate and research students scientists and engineers working in the area of low observables and stealth technology      **High Resolution Radar Cross-Section Imaging** Dean L.
