ABSTRACT

Much better access to international financial markets has granted many benefits to developing countries, but at the same time this approach has also exposed them to the unpredictable changes of these markets. However, the amount that can be hedged is limited because the other parties are usually given a ceiling to the total debt that they can get into with another country. Unlike borrowers, developing countries have limited possibilities of exploiting market niches to develop their investor base. The objective of this research paper is to look at different countries such as Russia and Mexico, and also realize how economic, political, and social risks account for these developing countries foreign and public debts; and how the management of these risks are necessary to combat the overall exposures these countries come across. With a fiscal view the primary cause of monetary growth in developing economies is usually found in large financial imbalances. The effect of inflation itself on the actual value of these countries financial deficits indicates the link between fiscal deficits, money growth, and inflation.

INTRODUCTION

Much better access to international financial markets has granted many benefits to developing countries, but at the same time this approach has also exposed them to the unpredictable changes of these markets. The sizable external foreign currency debt of many developing countries makes them vulnerable to changes in international exchange rates, interest rates, and currency attacks. Cautious macroeconomic policies have at times been confused by the fiscal consequences of losses associated with these aspects. As the international outgrowth markets have grown with lack of clearness, the chances of hedging the risks that come with borrowing in foreign currencies has expanded a great deal. Borrowers can act on opportunities to exploit market holes, and develop their investor base without bringing about the exchange rate risk. They can also use the interest rate swap market to manage the fully developed structure of their external debt.

However, the amount that can be hedged is limited because the other parties are usually given a ceiling to the total debt that they can get into with another country. Unlike borrowers, developing countries have limited possibilities of exploiting market niches to develop their investor base. The objective of this research paper is to look at different countries such as Russia and Mexico, and also realize how economic, political, and social risks account for these developing countries foreign and public debts; and how the management of these risks are necessary to combat the overall exposures these countries come across.

LITERATURE REVIEW

Sensible macroeconomic policies at times have been compromised by the consequences of losses associated with swings in international exchange rates. The most recent of such policies is the one set out by Russia. Russia had defaulted on domestic debt, devalued the ruble, and froze the payments of earlier Soviet-era commercial debt. The United States and a few European banks lost some \$10 billion to debt default alone, and swore to never go near Russia

How Firms in Developing Countries Manage Risk Jack D. Glen,1999 This paper considers the use of risk management techniques and instruments by firms in developing countries Increased financial market volatility in recent years has led to the development of a number of new financial instruments for managing the risks associated with specific transactions In most developing countries however firms face substantial obstacles to using these instruments Despite that developing country managers are becoming more and more aware of the need to manage risk In many cases they have turned to the International Finance Companies as a source of information on risk management and for assistance in accessing new risk management instruments In addition to the financial risks that often accompany transactions many firms in developing countries suffer from exposure to other economic risks especially the risk of long run overvaluation undervaluation of their local currency This type of exposure is more difficult to measure and manage than purely transactional exposures but can have very significant effects on competitiveness Unlike the management of transaction exposure which most often involves use of financial instruments management of economic exposure requires operational and marketing strategies in order to be effective *Smallholder Risk Management in Developing Countries* ,2013

Judith R. Lave,Lester B. Lave,1985* Natural Disasters and Individual Behaviour in Developing Countries Oliver Fiala,2017-04-04 This study investigates the complex link between natural disasters individual behaviour in the form of an individual s risk taking propensity and level of trust and the demand for microinsurance Developing countries are particularly vulnerable to the impacts of natural hazards and climate change as they affect their development processes and set back poverty reduction efforts Using a unique data set for rural Cambodia based on a survey experimental games and a discrete choice experiment the study highlights the importance of perceptions expectations and psychological factors in decision making processes with substantial consequences for long term economic perspectives and poverty alleviation Financial Risk Management in Banking Shahsuzan Zakaria,Sardar Islam,2019-08-08 As risk taking is an essential part of the banking

industry banks must practise efficient risk management to ensure survival in uncertain financial climates Banking operations are specifically affected by fluctuations in interest rates which cause financial imbalance thus banks are now required to put in place an effective management structure that incorporates risk management efficiency measures that help mitigate the wide range of risks they face In this book the authors have developed a new modelling approach to determine banks financial risk management by offering detailed insights into the integrated approach of dollar offset ratio and Data Envelopment Analysis DEA based on derivatives usage It further analyses the efficiency measurement under stochastic DEA approaches namely i Bootstrap DEA BDEA ii Sensitivity Analysis and iii Chance Constrained DEA CCDEA As demonstrated in the modelling exercise this integrated approach can be applied to other cases that require risk management efficiency measurement strategies Additionally this is the first book to comprehensively review the derivative markets of both the developed and developing countries in the Asia Pacific region by examining the differences of risk management efficiency of the banking institutions in these countries Based on this measurement approach strategies are provided for banks to improve their strategic risk management practices as well as to reduce the impacts from external risks such as changes in interest rates and exchange rates Furthermore this book will help banks to keep abreast of recent developments in the field of efficiency studies in management accounting specifically in relation to hedge accounting used by banks in the Asia Pacific region

Overcoming Developing Country Debt Crises Barry Herman, José Antonio Ocampo, Shari Spiegel, 2010-04 The book looks at historical sovereign debt crises in developing and transition economies and concludes that these occurrences have been economic and social catastrophes and are likely to happen again in the future due to the boom and bust nature of economic cycles which can wreak havoc in liberalized financial environments

The Macro Financing of Natural Hazards in Developing Countries Olivier Mahul, Eugene Gurenko, The authors propose a financial model to address the design of efficient risk financing strategies against natural disasters at the country level It is simple enough to shed analytical light on some of the key issues but flexible and realistic enough to provide some quantitative guidance on the ex ante financing of catastrophic losses The risk financing problem is decomposed into two steps First the resource gap defined as the difference between losses and available ex post resources such as post disaster aid is identified It determines the losses to be financed by ex ante financial instruments reserves catastrophe insurance and contingent debt Second the cost minimizing financial arrangements are derived from the marginal costs of the financial instruments The model is solved through a series of graphical analyses that make this complex financial problem easier to apprehend This model captures and explains the main impacts of financial parameters such as insurance premium cost of capital on efficient risk financing structures
