Annual Report of the Administrator of Veterans' Affairs for the Fiscal Year Ended June 30 ... (Departmental Ed.) United
States. Veterans Administration, 1981 *The Epidemiology of Plant Diseases* D.G. Jones, 2013-03-09 Most branches of
science have what might be termed a core area which is both related to and helps to integrate peripheral topics to form the
overall subject area Without this central link the subject is simply a collection of disparate albeit gener ally related topics
What genetics is to plant breeding epidemiology is to the subject of plant pathology and no matter what individual topic is
considered it is always possible to recognize the interaction with and relationship to epidemiological factors Broadly speaking
until the 1950s plant pathology was considered as the applied side of mycology and indeed the British Society of Plant
Pathology was spawned from its mentor the British Mycological Society with considerable help from The Association of
Applied Biology However with the exploding world popu lation and the growing demand for food plant pathologists became
increasingly aware of the need for a more considered measured precise and even holistic approach to their subject and
particularly to plant disease management Looking back over 40 years of teaching and research in plant pathology it was very
clear that the core of the subject was epidemiology and that this new study was developing a very distinct identity which was
rapidly being recognized in its own right The shotgun approach to plant disease control was quickly perceived to be too

inexact and almost every aspect of the subject was being reviewed refined and advanced *Annual Plan for Fiscal Year ...*
 National Toxicology Program (U.S.),1984 *Neoplasms of the Liver* Kunio Okuda,Kamal G. Ishak,2013-11-21 Primary liver cancer is a rather unusual malignancy in that the incidence varies tremendously from one geographical area to another While relatively uncommon in Western countries it is the most prevalent malignant neoplasm in Southeast Asia South Africa and many other regions in all the countries in which primary liver cancer is very prevalent account for more than two thirds of the world's population In China alone approximately 100 000 people die every year from primary liver cancer mostly hepatocellular carcinoma The incidence is rising in some countries especially Japan where it has doubled among males in the past 15 years or so a staggering and puzzling trend Since the demonstration of an etiological relationship between hepatitis B virus infection and hepatocellular carcinoma intensive research has been conducted in an effort to elucidate the role of the virus in hepatocarcinogenesis Though much progress has been made a full understanding of the molecular events leading to malignant transformation of the hepatocyte will probably require many more years of rigorous investigation Chemical carcinogens and several industrial pollutants may also be involved in the etiopathogenesis of neoplastic liver disease
