Handbook of Air Quality and Climate Change Hajime Akimoto, Hiroshi Tanimoto, 2023-09-27 This handbook covers the air quality air pollution from the viewpoints of causing impacts on human ecosystem health and climate change Traditionally air pollution has been a concern mainly in terms of its impacts on human health and it is still an immediate public and governmental concern in most Asian countries However in recent years so called extreme weather events such as stronger tropical cyclones flooding drought and other phenomena have been manifested causing tremendous losses of human lives and properties Importantly climate models tell us that such extreme weather events are actually induced by anthropogenic global warming It has been pointed out that mitigation or alleviation of such climate change leading to the extreme weather events in the next 30 years can be possible only by reducing air pollutants with positive radiative forcing such as ozone or methane which are called short lived climate pollutants SLCPs Here concerns about mitigation of air pollutants from the points of human health and climate change have merged This book covers different kinds of air pollutants and radiative forcers and how they can be measured It also mentions the situation of air pollutants in different continents and their regional impacts to human health environment and economy as well as their link to extreme weather events The book presents how the air pollution and climate change can be mitigated and how clean air technologies and international initiatives for co controlling air pollution and climate change have been developed

Pollutants in a Multimedia Environment Yoram Cohen, 2012-12-06 Pollutants released to the environment are distributed among the many environmental media such as air water soil and vegetation as the result of complex physical chemical and biological processes The possible environmental impact associated with chemical pollutants is related to their concentration levels and persistence in the various environmental compartments Therefore information regarding the migration of pollutants across environmental phase boundaries eg air water soil water and their accumulation in the environment is essential if we are to assess the potential environmental impact and the associated risks In recent years it has become apparent that environmental pollution is a multimedia problem Risk assessment and the design of appropriate pollution control measures require that we carefully consider the transport and accumulation of pollutants in the environment We are now recognizing that the environment must be considered as a whole and the scientific and regulatory approaches must consider the interactions of environmental media It is also becoming apparent that single medium approaches are partial and often counter productive On the other hand any multimedia program must carefully consider the rate of each environmental

medium in the overall multimedia scheme *Evaluating Environmental Processes and Technologies* Matthew Chidozie Ogwu, Sylvester Chibueze Izah, 2025-07-11 This book fills a crucial gap in the literature by providing an in depth exploration of sustainable environmental technologies While individual aspects of environmental management have been addressed in isolation this book offers a holistic view of the technologies and processes that together form the backbone of sustainable practices globally The emphasis on real world case studies from the Global South and the integration of technological advancements make this work timely and essential **Documents for the U.
