The Star Trails Compendium Marcha Fox, 2015-05-30 Marcha Fox author **Subject Guide to Books in Print**, 2001 of the Star Trails Tetralogy Beyond the Hidden Sky A Dark of Endless Days A Psilent Place Below and Refractions of Frozen Time is a physicist with over two decades experience working at NASA's Johnson Space Center in Houston Texas She has skillfully integrated real as well as speculative science into this hard science fiction series to stimulate interest in STEM topics Sociological and interpersonal situations are also presented in an entertaining way to which readers can relate Included here are all the juicy details of interest to science aficionados but would have slowed down the plot action A glossary of terms is included as well as topical discussion guides and project ideas at the chapter level for those who want to get even more value from these stories e g book club discussions science teachers and homeschoolers who wish to take full advantage of the tetralogy s technical content Dedicated fans will learn more about Cyraria where much of the tetralogy s plot action occurs This planet is unique due to its zero degree inclination combined within a lemniscate figure 8 orbit around a binary star system which results in extreme seasonal weather with which the saga s characters must learn to survive Besides explaining the reasons for its hostile climate additional sections address Star Trails alien races in particular Cyraria s indigenous race the bnolar as well as its political structure Dissecting the function of networks underpinning language repetition Matthew A Lambon Lambon Ralph, Marcelo L Berthier, 2014-12-17 In the 19th century ground breaking observations on aphasia by Broca and Wernicke suggested that language function depends on the activity of the cerebral cortex At the same time Wernicke and Lichtheim also elaborated the first large scale network model of language which incorporated long range and short range transcortical connections white matter pathways in language processing The arcuate fasciculus dorsal stream was traditionally viewed as the major language pathway for repetition but scientists also envisioned that white matter tracts travelling through the insular cortex ventral stream and transcortical connections may take part in language processing Modern cognitive neuroscience has provided tools including neuroimaging which allow the in vivo examination of short and long distance white matter pathways binding cortical areas essential for verbal repetition However this state of the art on the neural correlates of language repetition has revealed contradictory findings with some researchers defending the role of the dorsal and ventral streams whereas others argue that only cortical hubs Sylvian parieto

temporal cortex Spt are crucially relevant An integrative approach would conceive that the interaction between these structures is essential for verbal repetition For instance different sectors of the cerebral cortex e g Spt inferior frontal gyrus anterior insula act as hubs dedicated to short term storage of verbal information or articulatory planning and these areas in turn interact through forward and backward white matter projections Importantly white matter pathways should not be considered mere cable like connections as changes in their microstructural properties correlate with focal cortical activity during language processing tasks Despite considerable progress many outstanding questions await response The articles in this Research Topic tackle many different and critical new questions including 1 how white matter pathways instantiate dialogues between different cortical language areas 2 what are the specific roles of different white matter pathways in language functions in normal and pathological conditions 3 what are the language consequences of discrete damage to branches of the dorsal and ventral streams 4 what are the consequences e g release from inhibition of damage to the left white matter pathways in contralateral ones and viceversa 5 how these pathways are reorganised after brain injury 5 can the involvement sparing of white matter pathways be used in outcome prediction and treatment response and 5 can the microstructure of white matter pathways be remodelled with intensive rehabilitation training or biological approaches This Research Topic includes original studies and opinion and review articles which describe new data as well as provocative and insightful interpretations of the recent literature on the role of white matter pathways in verbal repetition in normal and pathological conditions A brief highlight summary of each is provided below 2002, Books in Print Supplement

Wixted, 2004-01-16 Now available in paperback This revised and updated edition of the definitive resource for experimental psychology offers comprehensive coverage of the latest findings in the field as well as the explosion of research in neuroscience Volume Four Methodology in Experimental Psychology organized by topic focuses on the comparative research methods used to measure psychological social behavioral and cognitive processes in human development **Environment, Subsistence and System** R. F. Ellen, 1982-09-30 Human ecology is ultimately part of a general theory of society This is the argument developed here by Roy Ellen whose exploration of the interplay between social organization and ecology in small scale subsistence systems has direct bearings both on the investigation of human environmental relations in general and on contemporary social theory He argues that while ecological study of non industrial societies cannot be elevated to the status of theory domain or discipline it can be represented as a single problematic that historically has acquired some degree of autonomy and which continues to make a significant contribution to a wider anthropology Dr Ellen introduces his subject matter through an extended and systematic discussion of some major frameworks developed within the last hundred years to examine and explain facets of the relationship between culture social organization and the environment determinism possibilism cultural ecology systems theory and ideas derived from modern biology He follows this with a detailed review and appraisal of important recent research involving the use of ecological models methods and data This original and innovative study of the pre eminently social character of human ecological

relations will be of considerable interest to all students and researchers concerned with understanding the nature of the relationship between human beings and their environments Risks and Resilience of Collaborative Networks Luis M. Rosenblueth, 2016-11-21 The complexity of living organisms surpasses our unaided habilities of analysis Hence computational and mathematical methods are necessary for increasing our understanding of biological systems At the same time there has been a phenomenal recent progress allowing the application of novel formal methods to new domains This progress has spurred a conspicuous optimism in computational biology This optimism in turn has promoted a rapid increase in collaboration between specialists of biology with specialists of computer science Through sheer complexity however many important biological problems are at present intractable and it is not clear whether we will ever be able to solve such problems We are in the process of learning what kind of model and what kind of analysis and synthesis techniques to use for a particular problem Some existing formalisms have been readily used in biological problems others have been adapted to biological needs and still others have been especially developed for biological systems This Research Topic has examples of cases 1 employing existing methods 2 adapting methods to biology and 3 developing new methods We can also see discrete and Boolean models and the use of both simulators and model checkers Synthesis is exemplified by manual and by machine learning methods We hope that the articles collected in this Research Topic will stimulate new research
