Biological and Medical Data Analysis José Luis Oliveira, 2005-11-04 This book constitutes the refereed proceedings of the 6th International Symposium on Biological and Medical Data Analysis ISBMDA 2005 held in Aveiro Portugal in November 2005 The 39 revised full papers presented were carefully reviewed and selected for inclusion in the book The papers are organized in topical sections on medical databases and information systems data analysis and image processing knowledge discovery and data mining statistical methods and tools for biomedical data analysis decision support systems collaborative systems in biomedical informatics as well as computational models structural analysis and microarray data analysis in the scope of bioinformatics Machine Learning in Computer Vision Nicu Sebe, 2005-06-03 The goal of this book is to address the use of several important machine learning techniques into computer vision applications An innovative combination of computer vision and machine learning techniques has the promise of advancing the field of computer vision which contributes to better understanding of complex real world applications The effective usage of machine learning technology in real world computer vision problems requires understanding the domain of application abstraction of a learning problem from a given computer vision task and the selection of appropriate representations for the learnable input and learned internal entities of the system In this book we address all these important aspects from a new perspective that the key element in the current computer revolution is the use of machine learning to capture the variations in visual appearance rather than having the designer of the model accomplish this As a bonus models learned from large datasets are likely to be

more robust and more realistic than the brittle all design models
