develop and express their own opinions in relation to ethics in psychology There are a number of famous many psychological studies that appear to have been harmful or cruel to the people or animals who took part in them For example memory researchers carried out studies on a man who had no memory for over forty years but because he had no memory he was never able to agree to the studies Is this a reasonable thing to do to someone Comparative psychologist Harry Harlow found that he could create severe and lasting distress in monkeys by keeping them in social isolation Is this a reasonable thing to do even if we find out useful things about human distress If you were able to use psychological techniques to break someone down so that they revealed information that was useful to your government would you do it If so why and if not why not These ethical issues are not easy to resolve and the debates continue as we encounter new dilemmas The book uses many examples of psychological research to look at key ethical issues ethical guidelines of psychologists socially sensitive research ethics in applied psychology the use of animals in research This book will be essential reading for and undergraduate and pre undergraduate students studying psychology and students of other subjects concerned with ethics

Ethical Issues in Psychology Philip Banyard, Cara Flanagan, 2025-05-06 Ethical Issues in Psychology A Critical Introduction offers readers a clear review of current ethical practices and ideas in psychology and goes on to challenge some of the agreed wisdom on ethics Ethical issues within psychology are not easy to resolve and debates continue as we encounter new dilemmas This book introduces ethics and their importance and uses examples from psychological research to consider key ethical issues ethical principles and guidelines for psychologists including BPS guidelines ethics in practice in psychology ethical problems within psychology such as racism and methods for ethical research including socially sensitive research internet mediated research and the use of animals in psychological research Fully up to date this book considers recent challenges for researchers and teachers including privacy and consent dilemmas in the use of social media for psychological research the rise of the open science movement and an awareness of research misconduct and fraud and the narrow focus of psychological research that positions itself as objective and scientific while sitting in a European and therefore predominantly White context Offering a comprehensive examination of ethical issues in psychology across a wide range of fields the book encourages readers to consider the ethics related questions they should be asking when undertaking their own research The book is essential reading for undergraduate and pre undergraduate students of psychology and related subjects
