Romantic Nationalism in Eastern Europe Serhiy Bilenky,2012-05-16 This book explores the political imagination of Eastern Europe in the 1830s and 1840s when Polish Russian and Ukrainian intellectuals came to identify themselves as belonging to communities known as nations or nationalities Bilenky approaches this topic from a transnational perspective revealing the ways in which modern Russian Polish and Ukrainian nationalities were formed and refashioned through the challenges they presented to one another both as neighboring communities and as minorities within a given community Further all three nations defined themselves as a result of their interactions with the Russian and Austrian empires Fueled by the Romantic search for national roots they developed a number of separate yet often overlapping and inclusive senses of national identity thereby producing myriad versions of Russianness Polishness and Ukrainianness

Science of Food Nutrition and Health Vinod Puri,2023-07-21 Diet is one of the important facets of comprehensive approach to good health along with physical social emotional and intellectual well being During the second half of the 20th century we witnessed a dramatic change in our eating patterns and lifestyle aided by agricultural and industrial revolution globalisation and urbanisation and emergence of associated diet related chronic diseases such as obesity coronary heart disease hypertension diabetes some type of cancer stroke and degenerative arthritis The science of food and nutrition is very

complex Nutrition science like many other fields of science is evolutionary and there are always conflicting research outcomes that need to be carefully evaluated We ingest hundreds of dietary components every day and understanding various metabolic pathways and the effect of interactions of various dietary components in vivo is rather challenging Recent advances in genetic research fostered the emergence of new disciplines such as nutrigenomics proteomics metabolomics and transcriptomics which can shed light on the molecular level interaction between dietary nutrients and the genome These technologies provide the vision for future nutrition research that may unravel how the diet genome interactions modifies the phenotype Food may not be the overall cure for the treatment of every possible disease but the importance of food in both causing and relieving certain problems cannot be neglected This is one of the most researched topics and there is a lot written about it However this book is probably the only text that provides up to date information on the various interrelated topics on food and nutrition that would be of interest to wider community **East European Cookbook** Caroline Ball,C.
