Predator Group:

Group Selection in Predator-Prey Communities Michael E. Gilpin, 2020-03-31 Many animals regulate their population density by patterns of behavior that would be easy to explain if the forces of natural selection acted to optimize group properties But Darwinian selection acts on individuals not groups and most simple theories have shown group selection to be too slow ever to oppose individual selection successfully In this book Michael Gilpin presents a model based on predator prey dynamics wherein nonlinear effects are important so that small advantages to the selfish individual are nonlinearly amplified into disaster for his group The result is that group selection can be rapid and powerful Of course many instances of apparent group selection can be explained by kin selection in other cases close examination reveals that seemingly altruistic behavior directly benefits the individual genotype as well as the group The value of the monograph is that it provides a robust model in which group selection pure and unadulterated can be seen to work

Cattle, Their Predators and Geomatics Research Michael O'Neal Campbell, 2025-08-06 Cattle are currently the most important domesticated mammals with populations numbering in the hundreds of millions and occupying large tracts of land while the conservation of large mammalian carnivores is becoming a dominant discourse in modern geopolitics also claiming large portions of the Earth's land surface Computer based surveying and communication systems including geomatics Big Data and Big Tech are becoming an essential part of human communication and environmental assessments and are critical to large scale assessments of land conflicts A current critical potent but neglected issue concerns the measurement of the interfaces of large carnivore and cattle ecologies in a cross continental format This book offers a novel approach to the interfaces of the sciences of conservation biology animal ecology agricultural development and geomatics which are increasingly interconnected in modern global development scenarios For animal ecology and conservation biology it is about the management systems that have developed from ecological and human parameters For agricultural development topics concern ancestral development physiological characteristics ecological requirements and predation opportunities and conflicts of cattle breeds For geomatics the topics concern the image based and survey based technologies that enable more critical environmental assessments The book takes a novel approach by examining the ancestry of cattle including the aurochs and current wild buffalos gaur banteng yaks bison the process of domestication into taurine and indicine cattle the semi domestication of yaks and water buffalo the ecologies of ancestral and modern large carnivores including bears big cats and canids and how the requirements of these large charismatic mammals conflict with the requirements of cattle and agricultural development in Asia Europe Africa North America and South America This integrative approach contributes to the interests of academic researchers students practitioners and policy makers and general readers

Predators John Seidensticker, Susan Lumpkin, 2008-03-04 Looks at predators from around the world including their weapons instincts and habitats Gypsy Moth Suppression and Regulatory Program, 1973, 1973

Social Predation Guy Beauchamp, 2013-12-07 The classic

literature on predation dealt almost exclusively with solitary predators and their prey. Going back to Lotka Volterra and optimal foraging theory, the theory about predation including predator-prey population dynamics was developed for solitary species. Various consequences of sociality for predators have been considered only recently. Similarly, while it was long recognized that prey species can benefit from living in groups, research on the adaptive value of sociality for prey species mostly emerged in the 1970s. The main theme of this book is the various ways that predators and prey may benefit from living in groups. The first part focusses on predators and explores how group membership influences predation success rate from searching to subduing prey. The second part focusses on how prey in groups can detect and escape predators. The final section explores group size and composition and how individuals respond over evolutionary times to the challenges posed by chasing or being chased by animals in groups. This book will help the reader understand current issues in social predation theory and provide a synthesis of the literature across a broad range of animal taxa. Includes the whole taxonomical range rather than limiting it to a select few. Features in-depth analysis that allows a better understanding of many subtleties surrounding the issues related to social predation. Presents both models and empirical results while covering the extensive predator and prey literature. Contains extensive illustrations and separate boxes that cover more technical features. i.e. to present models and review results.

Gangs and Organized Crime George W. Knox, Gregg Etter, Carter F. Smith, 2018-07-04. In *Gangs and Organized Crime* George W. Knox, Gregg W. Etter, and Carter F. Smith offer an informed and carefully investigated examination of gangs and organized crime groups covering street gangs, prison gangs, outlaw motorcycle gangs, and organized crime groups from every continent. The authors have spent decades investigating gangs as well as researching their history and activities, and this dual professional/academic perspective informs their analysis of gangs and crime groups. They take a multidisciplinary approach that combines criminal justice, public policy, and administration, law, organizational behavior, sociology, psychology, and urban planning perspectives to provide insight into the actions and interactions of a variety of groups and their members. This textbook is ideal for criminal justice and sociology courses on gangs as well as related course topics like gang behavior, gang crime, and the inner city. Organized crime, families, and transnational criminal groups. *Gangs and Organized Crime* is also an excellent addition to the professional's reference library or primer for the general reader. Primate Anti-Predator Strategies Sharon Gursky-Doyen, K.A.I. Nekaris, 2007-05-31. Since the 1960s, primatologists have recognized the impact of predation on the evolution of morphology, the social systems, and cognitive behavior of monkeys and apes, but few studies considered its impact on the prosimians, lemurs, lorises, galagos, and tarsiers. This comprehensive volume, written by experts in the field, narrows this gap by highlighting the effect of predation on

the order Primates in general Theoretical approaches to understanding how primates perceive predation threat as well as proximate and ultimate causes to address threat and attack are considered across the primate order Although this volume concentrates on the least known group in this theoretical area the prosimians contributions by researchers on numerous primate taxa across four major geographical regions make this a novel and exciting contribution to students interested in primate evolution and ecology Competing for Control David C. Video Surveillance of Nesting Birds Christine Ann Ribic, 2012-05-13 Until recently inferring identities of predators and monitoring cryptic behaviors at the nest was time consuming often with anecdotal results No more Video nest surveillance so aptly revealed in this volume has ushered in a new era of data collection that allows field workers to link environmental factors with such aspects as the temporal dynamics of predator communities in relation to what the birds are doing at their nests thus removing much of the guesswork of earlier studies Spencer G Sealy University of Manitoba Video Surveillance of Nesting Birds shatters earlier beliefs about how birds interact with nest predators Much of what we thought we knew about nesting and its hazards was flat out wrong as authors in this book discovered by using modern technology in the field As simple as we would like our models of animal behavior to be this book shows that reality is far more complex and nuanced Douglas H Johnson University of Minnesota

Critique of the Theory of Evolution Walter Friedman, 2007-08-15 In this book Walter Friedman exposes internal contradictions that nullify the theory of evolution He also reveals the ways Charles Darwin falsified observation data to promote his pseudoscientific discovery In a variety of ways Friedman aims to undercut the logical assumptions of evolutionary theory First he applies elementary probability theory to show that a random mutation cannot spread to an entire population which means that the evolution of species is a myth Friedman further contends that the centerpiece of Darwin s theory the hypothesis of natural selection is also a statistical impossibility as simple arithmetic reveals Third he turns to genetics data to demonstrate that the idea of the evolution of species leads to ridiculous conclusions Next Friedman employs anthropological findings of so called human ancestors to argue the reverse of what anthropologists believe to be true that evolution never took place Fifth Friedman appeals to the laws of physics to explain why it is impossible in principle for inorganic matter to transform into organic matter with a DNA like structure Darwin s racist view of people of African descent and its legal implications for the teaching of the evolutionary theory in public schools are also investigated The last section of the book provides extensive criticism of the books written by prominent evolutionists including Darwin Friedman points out that a vast majority of false scientific theories stumbled and fell not because they were replaced by new more sophisticated theories but simply because of an abundance of conflicting statements and disagreement with the experimental data For the same reasons he finally asserts the theory of evolution is destined for oblivion

Living in Groups Jens Krause, Graeme D. Ruxton, 2002-10-10 Shoals swarms flocks herds group formation is a widespread phenomenon in animal populations It raises several interesting questions for behavioral ecologists Why do animals form and live in groups and what factors influence the ways in which they do this What are the costs and benefits to an animal of group living How are these influenced by ecological factors The authors familiarize the reader with cutting edge ideas on the ecology and evolution of group living animals and detail fascinating case studies demonstrating them in action

habitats Each chapter also delves into how the social fabric and ecology of each species influence their ability to deal with natural and man made threats and shifting baselines **Fishery Ecosystem Dynamics** Michael J.
