Ubiquitous Computing Systems Hitomi Murakami, Hideyuki Nakashima, Hideyuki Tokuda, Michiaki Yasumura, 2005-08-29

This book is a collection of papers presented at UCS 2004 held on November 8-9 in Tokyo. UCS is a series of international symposia sponsored by the special interest group Ubiquitous Computing Systems of the Information Processing Society of Japan. The first UCS was held on November 17, 2003 in Kyoto. It was held as an invitation-based symposium. UCS 2004 was the second of the series and the first submission-based conference. UCS focuses on the emerging research area of ubiquitous computing systems. This emergence is an outcome of the rapid evolution in smart appliances and devices as well as tremendous advances in wireless networks and mobile computing. In the last few years,

various applications of information technology have been changing our everyday life rapidly and to a large extent. The best example is the use of mobile phones. By getting new sensing devices, cameras, their application field is no longer limited to communication but covers data communications including Internet access and data and program upload/download and so on. The symposium offered the opportunity for in-depth exploration of the most recent research and development findings in the field of ubiquitous computing. The submitted papers presented at UCS 2004 suggest such a direction to future technologies including mobile ad hoc networks, sensor networks, and context-aware technologies.

The Adventurous and Practical Journey to a Large-Scale Enterprise Solution Vahid Hajipour, 2023-03-16
The high failure rate of enterprise resource planning (ERP) projects is a pressing concern for both academic researchers and industrial practitioners. The challenges of an ERP implementation are particularly high when the project involves designing and developing a system from scratch. Organizations often turn to vendors and consultants for handling such projects, but every aspect of an ERP project is opaque for both customers and vendors. Unlocking the mysteries of building a large-scale ERP system. *The Adventurous and Practical Journey to a Large-Scale Enterprise Solution* tells the story of implementing an applied enterprise solution. The book covers the field of enterprise resource planning by examining state-of-the-art concepts in software project management methodology, design, and development, integration, policy, and deployment framework, including a hybrid project management methodology using waterfall as well as a customized Scrum-based approach. A novel multi-tiered software architecture featuring an enhanced flowable process engine. A unique platform for coding business processes efficiently. Integration to embed ERP modules in physical devices. A heuristic-based framework to successfully step into the Go-live period. Written to help ERP project professionals, the book charts the path that they should travel from project ideation to systems implementation. It presents a detailed real-life case study of implementing a large-scale ERP and uses storytelling to demonstrate incorrect and correct decisions frequently made by vendors and customers. Filled with practical lessons learned, the book explains the ins and outs of adopting project methodologies. It weaves a tale that features both real-world and scholarly aspects of an ERP implementation.

Manufacturing Execution System - MES Jürgen Kletti, 2007-05-01
The transformation of the classic factory from a production facility into a modern service center has resulted in management problems for which many

companies are not yet prepared The economic efficiency of modern value creation is not a property of the products but rather of the process What this means is that the decisive potentials of companies are to be found not so much in their production capability but in their process capability For manufacturers the requirement for process capability which has in the meantime become the basis of the certification codes gives rise in turn to the requirement that all value adding processes be geared to the process result and thus to the customer A necessary condition of process transparency is the ability to map the company's value stream in real time without the acquisition process involving major outlay a capability which is beyond the dominant ERP systems Today modern manufacturing execution systems MES can offer real time applications They generate current and even historical maps for production equipment and can thus be used as a basis for optimization processes As early as the beginning of the 1980s work started on methods of this kind which were then known as production data acquisition or machine data collection But while the main emphasis in the past was on achieving improvements in machine utilization today the concern is predominantly to obtain real time mapping of the value stream supply chain
