SAS Jungle Survival Barry Davies,2013-01-08

When we think of jungles we often think of a densely forested area with thick foliage this is what is known as a primary jungle But jungles can also include swamps grasslands and cultivated areas Primary jungles can fall into the category of either a tropical rain forest or a deciduous forest depending on the types of trees and plants found growing there A tropical rain forest is typified by having tall trees whose upper branches interlock to form canopies Yet of all the environments in which man has to survive the jungle offers the best chance The SAS have operated in the jungle for years sometimes staying in the forest for months at a time They developed a technique whereby they had two sets of clothing one for daytime use and one for night Just before they went to sleep they would change from their wet clothing which was normally hung under the shelter to dry out In the morning they would change from their dry clothing and put on the wet It is an uncomfortable change but one that guaranteed a good night s sleep in dry clothing The SAS Guide to Jungle Survival will teach the reader to come to terms with the jungle environment understand it and work with it as opposed to fighting it The jungle forest can provide shelter food and water in abundance and this book will show you how If the jungle offers any problems it is with disease and wild animals The SAS Guide to Jungle Survival will show you how to avoid and resist both and come out alive

crossing on foot vehicle or in an aircraft other than a commercial flight should be prepared Desert regions are those least likely to have an easily available source of water Nevertheless the survivor must find a water supply or they will die No matter how abundant the rest of your survival resources are without water your time is limited To travel or stay put is one of the great dilemmas any survivor must face The factors governing any decision should be based on where you are your chances of survival if you stay put where you intend moving to and the related hazards in getting there Without communications it is difficult to assess whether there will be a rescue attempt and even if there is it would be presumptive to believe that they will locate you Additionally having the physical and mental ability plus the resources to travel and reach a given point accurately is also a major factor The SAS Guide to Desert Survival prepares the traveler for any situation they may find themselves in while venturing across desert and arid areas It will explain the need for an immediate plan as time will be against you as well as how to dress for the ultimate protection from the sun and the cold yes deserts get very cold at night The book will show you how and when to travel as well as how to navigate a route to safety The desert has two main advantages the sun and the general clearness of visibility a simple heliograph will flash a signal to both ground and air rescue services up to twenty five miles away

**Encyclopedia of Medical Decision Making** Michael W. Kattan, 2009-08-15 Decision making is a critical element in the field of medicine that can lead to life or death outcomes yet it is an element fraught with complex and conflicting variables: diagnostic and therapeutic uncertainties, patient preferences and values, and costs. Together, decisions made by physicians, patients, insurers, and policymakers determine the quality of health care, quality that depends inherently on counterbalancing risks and benefits and competing objectives such as maximizing life expectancy versus optimizing quality of life or quality of care versus economic realities. Broadly speaking, concepts in medical decision making (MDM) may be divided into two major categories: prescriptive and descriptive. Work in the area of prescriptive MDM investigates how medical decisions should be done using complicated analyses and algorithms to determine cost effectiveness, measures, prediction methods, and so on. In contrast, descriptive MDM studies how decisions actually are made, involving human judgment, biases, social influences, patient factors, and so on. The Encyclopedia of Medical Decision Making gives a gentle introduction to both categories, revealing how medical and healthcare decisions are actually made and constrained and how physician, healthcare management, and patient decision making can be improved to optimize health outcomes.

**Key Features:**

- Discusses very general issues that span many aspects of MDM, including bioethics, health policy, and economics.
- Disaster simulation modeling, medical informatics, the psychology of decision making, shared and team medical decision making, social, moral, and religious factors, end of life decision making, assessing patient preference and patient adherence, and more.
- Incorporates both quantity and quality of life in optimizing a medical decision.
- Considers characteristics of the decisionmaker and how those characteristics influence their decisions.
- Presents outcome measures to judge the quality or impact of a medical decision.
- Examines some of the more commonly encountered biostatistical methods used in prescriptive decision making.
- Provides utility assessment techniques that facilitate quantitative medical decision making.
- Addresses the many different assumption perspectives the decision maker might choose from when trying to optimize a decision.
- Offers mechanisms for defining MDM algorithms.

With comprehensive and authoritative coverage by experts in the fields of medicine, decision science, and cognitive psychology and healthcare management, this two-volume Encyclopedia is a must-have resource for any academic library.
