## **Saving The Tropical Forests:**

**Saving the Tropical Forests** Judith Gradwohl, Russell Greenberg, 2013-11-05 The destruction of the tropical forest is one of the major problems of our time Vast areas are rapidly becoming wastelands which support only a few tough weeds perhaps some cattle and the farms allowed to the poor This book provides a vision of hope in Latin America Africa And South East Asia growing numbers of people are developing techniques specifically designed to promote the wise use and preservation of remaining forest lands However these grassroots strategies are often ignored in favour of grandiose schemes which inevitably fail This pattern must be broken now or the tropical forests will be lost forever Published in association with the Smithsonian Institution Preface by Michael Robinson Director National Zoological Park Smithsonian Institution Originally published in 1988 The Rainforest Harvest Friends of the Earth, 1992 *Trees of Life* Kenton Miller, Laura Tangle, 1991-04-30 Staggering statistics and dramatic headlines about the destruction of rain forests the world's richest ecosystems are only a small part of the devastating story of global deforestation This volume provides comprehensive coverage of this complex scientific and political catastrophe in the making and examines the costs and the consequences in human economic and ecological terms Also a survey of both contemporary and historical assaults on the world's forests along with their impact on the dependency of native peoples and cultures is chronicled Specifically within developing nations the relationships among poverty population growth and short sighted government policies are calculated to be fundamental elements in the acceleration of tropical deforestation With a special section on North America's old growth forests a glossary of special terms an account of both the importance and relevance of arboreal genetic diversity an extended list of suggested readings and appendices listing international and federal organizations which offer educational materials for both individual and classroom use this book offers important practical resources and makes clear the social economic and biological costs of continued global deforestation JJK **Saving the Rainforest** Sally Morgan, 2007-01-01 Describes rainforests the life they support and efforts to protect them **50 Simple Steps to Save the World's Rainforests** Kim Henderson, The Green Patriot Working Group, 2012-03-12 Despite the very best conservation and environmental policy making efforts at least 80 000 acres of tropical rainforest disappear each day If action is not taken now experts estimate that the world's rainforests will mostly disappear within 50 years Currently the destruction of tropical forests is responsible for 17 percent of man made carbon emissions more than what comes from all the world's cars airplanes and ships combined Tropical rainforests need our help and that's where 50 Simple Steps to Save the World's Rainforests comes in The future of the world's rainforests lies to a large extent in the collective hands of consumers and how they shop since demand is what fuels the forces driving deforestation agriculture logging and resource extraction Through the 50 step journey you will learn how as a consumer you may unwittingly support rainforest destruction and more importantly precisely how you can make different choices that help save rainforests For example you will learn how your paper use and purchases of rayon clothing affect Indonesian rainforests

where Sumatran tigers are critically endangered or how simply eating Brazil nuts helps save the Amazon rainforest You will discover how the cultivation of palm oil a common ingredient in confections baked goods soaps and biofuels is fueling rampant deforestation in Malaysia Indonesia and Papua New Guinea and how you can avoid it 50 Simple Steps to Save the Rainforests is the ultimate primer for anyone wanting to take action to help save this ecosystem which is so critical to the future of mankind

Thaler,2024-02-27 An unflinching investigation of the false promises of land sparing exposing how its illusory successes mask the failures of green capitalism For two decades the concept of land sparing the claim that agricultural intensification can spare land by preventing forest clearing for agricultural expansion has dominated tropical forest conservation Land sparing policies transform landscapes and livelihoods with the promise of reconciling agricultural development with environmental conservation But that land sparing promise is false Based on six years of research on agrarian frontiers in Indonesia Brazil and Bolivia this book traces where and how land sparing becomes policy and charts the social and ecological effects of these political contests Gregory M Thaler explains why land sparing appears successful in some places but not in others and reveals that success as an illusion achieved by displacing deforestation to new frontiers The failure of land sparing exposes a harsh truth behind assurances of green capitalism capitalist development is ecocide      *Science and Stewardship to Protect and Sustain Wilderness Values* ,2011      **Supplement to Tropical Forest Conservation and Development : a Bibliography** Jean Albrecht,1995      **Tropical Forest Conservation** Douglas Southgate,1998-06-04 Attempts to halt the destruction of rain forests and other natural habitats in the tropics have met with little success In particular national parks like those found in wealthy nations have proven difficult to establish in Africa Asia and South and Central America More often than not people inhabiting areas designated for protection resist being told by outsiders that they must change how and where they live Alternative approaches frequently embodied in integrated conservation and development projects ICDPs are now being pursued The goal is to address local communities desires for improved standards of living while simultaneously meeting conservation objectives Nature based tourism and sustainable harvesting of forest products are the centerpieces of ICDPs and related initiatives This book assesses the viability of conservation strategies predicated on the adoption of environmentally sound enterprises in and around threatened habitats Drawing on research in Brazil Costa Rica Ecuador and Peru and on his extensive experience working in South and Central America and the Caribbean the author demonstrates that it is rare for forest dwellers to derive much benefit from ecotourism the extraction of timber and other commodities or the collection of samples used in pharmaceutical research Often these activities are simply unprofitable Even when they are profitable the benefits tend not to accrue locally but instead are captured by outside firms and individuals who can provide

important services like safe and reliable transportation The author contends that human capital formation and related productivity enhancing investment is the only sure path to economic progress and habitat conservation     An Economic Approach to Saving the Tropical Forests David William Pearce,1990     Emerging Threats to Tropical Forests William F.
