Wolf, 2014-03-14 Mark J P Wolf s study of imaginary worlds theorizes world building within and across media including literature comics film radio television board games video games the Internet and more Building Imaginary Worlds departs from prior approaches to imaginary worlds that focused mainly on narrative medium or genre and instead considers imaginary worlds as dynamic entities in and of themselves Wolf argues that imaginary worlds which are often transnarrative transmedial and transauthorial in nature are compelling objects of inquiry for Media Studies Chapters touch on a theoretical analysis of how world building extends beyond storytelling the engagement of the audience and the way worlds are conceptualized and experienced a history of imaginary worlds that follows their development over three millennia from the fictional islands of Homer s Odyssey to the present internarrative theory examining how narratives set in the same world can interact and relate to one another an examination of transmedial growth and adaptation and what happens when worlds make the jump between media an analysis of the transauthorial nature of imaginary worlds the resulting concentric circles of authorship and related

topics of canonicity participatory worlds and subcreation s relationship with divine Creation Building Imaginary Worlds also provides the scholar of imaginary worlds with a glossary of terms and a detailed timeline that spans three millennia and more than 1 400 imaginary worlds listing their names creators and the works in which they first appeared **Imaging Our Solar**

System: The Evolution of Space Mission Cameras and Instruments Bernard Henin,2022-01-28 As we speak stunning new snapshots of our Solar System are being transmitted to Earth by a fleet of space probes landers and rovers Yet nowadays it is all too easy to take such images for granted amidst the deluge of competing visuals we scroll through every day To truly understand the value of these incredible space photos we first need to understand the tools that made them possible This is the story of imaging instruments in space detailing all the technological missteps and marvels that have allowed us to view planetary bodies like never before From the rudimentary cameras launched in the 1950 s to the cutting edge imaging instruments onboard the Mars Perseverance rover this book covers more than 100 imaging systems sent aboard various spacecraft to explore near and distant planetary bodies Featured within are some of the most striking images ever received by these pioneering instruments including Voyager s Pale Blue Dot Apollo s Blue Marble Venera s images from the surface of Venus Huygens images of Titan New Horizon s images of Pluto and Arrokoth and much more Along the way you will learn about advancements in data transmission digitization citizen science and other fields that revolutionized space imaging helping us peer farther and more clearly across the Solar System [Exploring the Ocean Worlds of Our Solar](#)

[System](#) Bernard Henin,2024-08-22 In the past 25 years planetary science has undergone a revolution with the discovery of vast oceans of liquid water within the icy moons of our Solar System These subsurface oceans are concealed beneath thick ice layers We refer to these moons and similar ocean bearing planetary objects as ocean worlds In this 2nd edition we delve into and compare the latest scientific discoveries on 22 confirmed or potential ocean worlds ranging from the giant asteroid Ceres and the icy moons Europa and Enceladus to the distant dwarf planets of the outer Solar System such as Pluto Sedna and Eris Along the way we explore the contributions of multiple spacecraft such as the Pioneers the Voyagers Galileo Cassini Huygens and many others which have provided much of our current knowledge about these worlds as well as the latest scientific research on this subject This book also explores the potential for life on each of the confirmed ocean worlds evaluating their habitability Ultimately these might hold the key to answering fundamental questions about life How did life begin Is there life beyond Earth Where do we come from With contributions from leading planetary scientists at NASA ESA and other institutions this book aims to be the definitive reference for anyone interested in this captivating subject

Understanding Life Third Edition is intended for non major biology students General Biology non majors Principles of Biology *Disturbing the Solar System* Alan E. Rubin, 2021-11-09 The solar system has always been a messy place in which gravity wreaks havoc Moons form asteroids and comets crash into planets ice ages commence and dinosaurs disappear By describing the dramatic consequences of such disturbances this authoritative and entertaining book reveals the fundamental interconnectedness of the solar system and what it means for life on Earth After relating a brief history of the solar system Alan Rubin describes how astronomers determined our location in the Milky Way He provides succinct and up to date accounts of the energetic interactions among planetary bodies the generation of the Earth's magnetic field the effects of other solar system objects on our climate the moon's genesis the heating of asteroids and the origin of the mysterious tektites Along the way Rubin introduces us to the individual scientists including the famous the now obscure and the newest generation of researchers who have enhanced our understanding of the galactic neighborhood He shows how scientific

discoveries are made he discusses the uncertainty that presides over the boundaries of knowledge as well as the occasional reluctance of scientists to change their minds even when confronted by compelling evidence This fresh historical perspective reveals science as it is an imperfect but self correcting enterprise Journeying to the frontiers of knowledge Rubin concludes with the exciting realm of astrobiology He chronicles the history of the search for life on Mars and describes cutting edge lines of astrobiological inquiry including panspermia the possible transfer of life from planet to planet the likelihood of technologically advanced alien civilizations in our galaxy and our probable responses to alien contact Authoritative and up to date but also entertaining and fluidly written *Disturbing the Solar System* will appeal to any reader who has ever picked up a rock or gazed at the moon with a sense of wonder

The Caloris Network Nick Kanas, 2016-05-13 The year is 2130 The first ever expedition is sent to Mercury to search for the cause of an unknown source of electromagnetic radiation that can destroy space ships passing by the planet Thought to be inhospitable and lifeless the surface of Mercury provides startling surprises for the crew that endanger their lives and challenge their established notions of what it means to be a sentient being And some of the crew members have their own separate agendas The scientific appendix at the end of the book introduces readers to the wondrous world of Mercury and how it has been portrayed in literary fiction up to the present time The author then uses scientific literature to present a concept of life that is not based on carbon chemistry or the need for water There is also a discussion of consciousness based on electromagnetic wave theory References are provided for further reading Nick Kanas is an Emeritus Professor of Psychiatry at the University of California San Francisco where he directed the group therapy training program For over 20 years he conducted research on group therapy and for nearly 20 years after that he was the Principal Investigator of NASA funded research on astronauts and cosmonauts He is the co author of *Space Psychology and Psychiatry* which won the 2004 International Academy of Astronautics Life Science Book Award and the author of *Humans in Space The Psychological Hurdles* which won the 2016 International Academy of Astronautics Life Science Book Award Dr Kanas has presented talks on space psychology and on celestial mapping at several regional and Worldcon science fiction conventions A Fellow of the Royal Astronomical Society London he has been an amateur astronomer for over 50 years and is an avid reader of science fiction He is also the author of two non fiction books *Star Maps History Artistry and Cartography* and *Solar System Maps From Antiquity to the Space Age* and two science fiction novels *The New Martians* and *The Protos Mandate* all published by Springer

All the Wonder that Would Be Stephen Webb, 2017-05-03 It has been argued that science fiction SF gives a kind of weather forecast not the telling of a fortune but rather the rough feeling of what the future might be like The intention in this book is to consider some of these bygone forecasts made by SF and to use this as a prism through which to view current developments in science and technology In each of the ten main chapters dealing in turn with antigravity space travel aliens time travel the nature of reality invisibility robots means of transportation augmentation of the human body and last but not least mad scientists common assumptions once made by the

SF community about how the future would turn out are compared with our modern understanding of various scientific phenomena and in some cases with the industrial scaling of computational and technological breakthroughs A further intention is to explain how the predictions and expectations of SF were rooted in the scientific orthodoxy of their day and use this to explore how our scientific understanding of various topics has developed over time as well as to demonstrate how the ideas popularized in SF subsequently influenced working scientists Since gaining a BSc in physics from the University of Bristol and a PhD in theoretical physics from the University of Manchester Stephen Webb has worked in a variety of universities in the UK He is a regular contributor to the Yearbook of Astronomy series and has published an undergraduate textbook on distance determination in astronomy and cosmology as well as several popular science books *N-Space* Larry Niven, 2007-08-21 This retrospective collection of stories from all phases of Niven's writing career is rich with gossip storytelling vigor and sheer science fictional play Physics and Chemistry of the Solar System John S. Lewis, 2004-02-09 John S. Lewis **I, Asimov** Isaac Asimov, 2009-12-23 Arguably the greatest science fiction writer who ever lived Isaac Asimov also possessed one of the most brilliant and original minds of our time His accessible style and far reaching interests in subjects ranging from science to humor to history earned him the nickname the Great Explainer I Asimov is his personal story vivid open and honest as only Asimov himself could tell it Here is the story of the paradoxical genius who wrote of travel to the stars yet refused to fly in airplanes who imagined alien universes and vast galactic civilizations while staying home to write who compulsively authored more than 470 books yet still found the time to share his ideas with some of the great minds of our century Here are his wide ranging thoughts and sharp eyed observations on everything from religion to politics love and divorce friendship and Hollywood fame and mortality Here too is a riveting behind the scenes look at the varied personalities Campbell Ellison Heinlein Clarke del Rey Silverberg and others who along with Asimov helped shape science fiction As unique and irrepressible as the man himself I Asimov is the candid memoir of an incomparable talent who entertained readers for nearly half a century and whose work will surely endure into the future he so vividly envisioned
