Science Museum Energy:

Energy Anthony Wilson, 1998 **Interpreting Energy at Museums and Historic Sites** Leah S. Glaser, 2022-12-13

Experts all agree that human beings can mitigate climate change by changing how we use energy for heat light movement and production Stewards of heritage sites and collections can engage the public at the grassroots level to raise awareness about the cultural and socioeconomic reasons for past choices that have contributed to climate change This book will help cultural institutions identify ways to interpret new stories through historic places and resources especially if staff have made the commitment to go green Without place based context discussions about energy focus primarily on the science and not the human experience By reminding us of our past practices and values regarding energy production and use historic places can inspire different ways of thinking about transitioning to different energy sources and question the doctrine that high energy use is necessary for progress Public interpretation can expose the vast energy infrastructure and the impact of energy extraction production and use on place Historic sites offer place based contexts for visitors to interact with and think critically about the processes and the impact of energy development in for example a maritime village This book synthesizes science with the humanities outside of popular media and other politicized spaces to identify different kinds of energy resources in many historic collections or sites It supplements current calls for economic and policy changes because as stewards of historic places we need to do what we can in this all hands on deck moment to prepare for shared stewardship of our future Public Works for Water and Power Development and Energy Research Appropriation Bill, 1978 United States. Committee on Appropriations. Subcommittee on Energy and Water Development, 1992 *Museum Practices and the Posthumanities* Fiona R. Cameron, 2023-10-24 This book critiques modern museologies and curatorial practices that have been complicit in emerging existential crises It confidently presents novel more than human curatorial visions methods frameworks policies and museologies radically refiguring the epistemological foundations of curatorial museological thinking and practice for a habitable planet Modern curatorial and museological practices are dominated by modern humanism in which capital growth

social technological advancement hubris extraction species logics and colonial domination predominate often without reflection While history science and technology museums and their engagement with non human worlds have always been ecological as an empirical reality the human centred frameworks and forms of human agency that institutions deploy tend to be non cognizant of this reality Museum Practices and the Posthumanities Curating for Planetary Habitability reveals how these practices are ill equipped to deal with the contemporary world of rapid digital transformations post Covid living climate change and its impacts among other societal changes and it shows how museums might best meet these challenges by thinking with and in more than human worlds This book is aimed at museological scholars and museum professionals and it will provide them with the inspiration to conduct research on and curate from a different ecological reference point to promote a world good enough for all things to thrive in radical co existence
