Science, Theology, and Ethics Ted Peters, 2017-03-02 Science challenges faith to seek fuller understanding and faith challenges science to be socially and ethically responsible This book begins with faith in God the Creator of the world and then expands our understanding of creation in light of Big Bang cosmology and new discoveries in physics Examining the expanding frontier of genetic research Ted Peters draws out implications for theological understandings of human nature and human freedom Issues discussed include methodology in science and theology eschatology in cosmology and theology freedom and responsibility in evolution and theology and genetic determinism genetic engineering and cloning in relation to freedom the commodification of human life and equitable distribution of the fruits of genetic technology The dialogue model of relationship between science and religion proposed in this book provides a common ground for the disparate voices among theologians scientists and world religions This common ground has the potential to breathe new life into current debates about the world in which we live move and have our being *Theology in the Context of Science* John

Polkinghorne, 2014-05-14 Just as gendered cultural and geographical perspectives have illuminated and advanced theological thought the contributions of twentieth century science have much to offer theology In his latest book physicist theologian John Polkinghorne renowned as one of the world's foremost thinkers on science and religion offers a lucid argument for developing the intersection of the two fields as another form of contextual theology Countering recent assertions by new atheists that religious belief is irrational and even dangerous Polkinghorne explores ways that theology can be open to and informed by science He describes recent scientific discourse on such subjects as epistemology objectivity uncertainty and rationality and considers the religious importance of the evolution in these areas of scientific thought Then evaluating such topics as relativity space and time and evolutionary theory he uses a scientific style of inquiry as a foundation on which to build a model of Christian belief structure Science and theology share in the great human quest for truth and understanding says Polkinghorne and he illustrates how their interaction can be fruitful for both *Issues in Science and Theology: Nature*

The Big Questions in Science and Religion Keith Ward, 2008-05 Can religious beliefs survive in the scientific age Are they resoundingly outdated Or is there something in them of great importance even if the way they are expressed will have to change given new scientific context These questions are among those at the core of the science religion dialogue An Anglican priest who was once an atheist offers compelling insights into the often contentious relationship between diverse religious views and new scientific knowledge He identifies ten basic questions about the nature of the universe and human life Among these are Does the universe have a goal or purpose Do the laws of nature exclude miracles Can science provide a wholly naturalistic explanation for moral and religious beliefs Has science made belief in God obsolete Are there any good science based arguments for God Ward considers concepts from Buddhism Confucianism Taoism Islam Hinduism Judaism and Christianity while featuring the speculations of cosmologists physicians mathematicians and philosophers [A History of the Warfare of Science with Theology in Christendom, Vol. I \(in Two Volumes\)](#) Andrew D. White, 2010-01-01 The battle between science and religion in American popular life is as old as America itself By the late 19th century it had reached a fever pitch culminating in the two volume 1896 work A History of the Warfare of Science with Theology in Christendom The result of thirty years of research by historian and educator ANDREW DICKSON WHITE 1832 1918 a founder of Cornell University this is White s attack on intellectually stifling religious dogma and his explication of the conflict thesis of outright warfare between science and religion While scholars today generally see the situation as more nuanced the conflict thesis remains a popular metaphor in the mind of the general public and White s work continues to speak to us today H L Mencken called this one of the noblest monuments of American scholarship and it will fascinate anyone who is troubled by the ongoing influence by religious authorities into secular science In Volume I White looks at the transformation of our understanding of the world from a primarily religious one of divine creation to a primarily scientific one informed by evolution astronomy and biology

Ramified Natural Theology in Science and Religion Rodney Holder, 2020-10-15 This book offers a rationale for a new ramified natural theology that is in dialogue with both science and historical critical study of the Bible Traditionally knowledge of God has been seen to come from two sources nature and revelation However a rigid separation between these sources cannot be maintained since what purports to be revelation cannot be accepted without qualification rational argument is needed to infer both the existence of God from nature and the particular truth claims of the Christian faith from the Bible Hence the distinction between bare natural theology and ramified natural theology The book begins with bare natural theology as background to its main focus on ramified natural theology Bayesian confirmation theory is utilised to evaluate competing hypotheses in both cases in a similar manner to that by which competing hypotheses in science can be evaluated on the basis of empirical data In this way a case is built up for the rationality of a Christian theist worldview

Addressing issues of science theology and revelation in a new framework this book will be of keen interest to scholars working in Religion and Science Natural Theology Philosophy of Religion Biblical Studies Systematic Theology and Science and Culture *Science in Theology* Neil Messer, 2020-07-23 If we wish to understand ourselves and the world in relation to God what contribution to our understanding should we expect from a Christian tradition with its roots in the Bible and what should we expect from the natural sciences Neil Messer sets out five types of answer to that question The responses range from the view that the Christian tradition has nothing to contribute through various forms of dialogue to the claim that science is irrelevant to theological understanding This classification scheme is illustrated and tested by extended explorations of three topics in the science and theology field how to think about God's action in the world how to make theological sense of the suffering and destruction involved in the evolution of life and how theology should respond to the scientific study of religion The classification offers a way to understand and evaluate these debates and the discussion of specific examples demonstrates the strengths and weaknesses of each type of approach The book concludes with suggestions for how readers might use this scheme to guide their own work on science and theology For students and researchers in science and theology this book offers three things a tool for understanding specific debates in science and theology critical surveys of some of the most important debates in the field and a concise guide to ways of setting up encounters of theology with science Faith, Science and Understanding J. C. Polkinghorne, 2001-01-01 In this captivating book one of the most highly regarded scientist theologians of our time explores aspects of the interaction of science and theology John Polkinghorne defends the place of theology in the university it is part of the human search for truth and discusses the role of revelation in religion it is a record of experience and not the communication of unchallengeable propositions Throughout his thought provoking conversation Polkinghorne speaks with an honesty and openness that derives from his many years of experience in scientific research A central concern of Polkinghorne's collection of writings is to reconcile what science can say about the processes of the universe with theology's belief in a God active within creation The author examines two related concepts in depth The first is the divine self limitation involved in creation that leads to an important reappraisal of the traditional claim that God does not act as a cause among causes The other is the nature of time and God's involvement with it an issue that Polkinghorne shows can link metascience and theological understandings In the final section of the book the author reviews three centuries of the science and theology debate and assesses the work of major contemporary contributors to the discussion Wolfhart Pannenberg Thomas Torrance and Paul Davies He also considers why the science theology discussion has for several centuries been a particular preoccupation of the English **Science and Religion Around the World** John Hedley Brooke, Ronald L. Numbers, 2011-01-14 The past quarter century has seen an explosion of interest in the history of science and religion But all too often the scholars writing it have focused their attention almost exclusively on the Christian experience with only passing reference to other traditions of both science and faith At a time

when religious ignorance and misunderstanding have lethal consequences such provincialism must be avoided and in this pioneering effort to explore the historical relations of what we now call science and religion the authors go beyond the Abrahamic traditions to examine the way nature has been understood and manipulated in regions as diverse as ancient China India and sub Saharan Africa Science and Religion around the World also provides authoritative discussions of science in Judaism Christianity and Islam as well as an exploration of the relationship between science and the loss of religious beliefs The narratives included in this book demonstrate the value of plural perspectives and of the importance of location for the construction and perception of science religion relations

A History of the Warfare of Science with Theology in Christendom Andrew Dickson White, 1913

A History of the Warfare of Science with Theology in Christendom Andrew Dickson White, 1980 *Science and Religion* Jeff Astley, David Brown, Ann Loades, 2004 This reader brings together carefully selected material from a wide range of authors on the relationships between science religion and theology It samples the recent literature on the challenges to religion posed by both modern physics and evolutionary biology as well as exploring the relationship between scientific and theological approaches Topics include models of interaction between science and religion historical reflections on the conflict thesis scientific and theological methods creation and modern cosmology uncertainty and chaos creationism and evolutionary theory the anthropic principle and design and the challenge of reductionism Contributors include Ian Barbour Michael Behe Richard Dawkins John Habgood Mary Hesse T H Huxley Alister McGrath Arthur Peacocke John Polkinghorne Michael Ruse Keith Ward and Fraser Watts *The Relevance of Natural Science to Theology* W.H. Austin, 1976-06-18 This book is an attempt to show that the common belief that natural science is in principle irrelevant to theological doctrines is ill founded and to explore some of the ways in which science might bear on theology The main arguments for the irrelevance thesis are examined in some detail and in each case found either to be unsound or to support only a restricted version of the thesis A distinction is drawn between direct relevance of scientific theories and scientifically established facts to theological doctrines i e the former either contradict or lend evidential support to the latter and various forms of indirect relevance It is then suggested that arguments for the irrelevance thesis are of two main types One type is based on an instrumentalist interpretation either of scientific theories as in Pierre Duhem or of religious beliefs as in R B Braithwaite In neither case it is argued here is an instrumentalist interpretation satisfactory and in both cases even if an instrumentalist interpretation is adopted science can bear on theology in important indirect ways The other main way of arguing for the irrelevance of science to theology depends on specifying distinct and mutually exclusive realms with which they are respectively concerned But ways of doing this which are sufficiently sophisticated to be plausible prove difficult to formulate coherently In this connection the approach of existentialist theologians exemplified by Karl Heim is studied as in the contrast drawn also by some linguistic philosophers between the objectivity of science and the personal commitment required by religious beliefs By way of summary and application a brief

study of the doctrine of divine providence is then made in which it is argued that contemporary theologians difficulties with this doctrine result in large part from their efforts so to define theology as to exclude any possible bearing upon it of natural science Publisher The Shaping of Rationality J. Wentzel van Huyssteen, 1999-07-20 This book arises out of a deep fascination with the relationship between human intelligence and rationality and with how our fragile but uniquely human ability to be rational invariably affects our everyday lives as well as our involvement with faith theology and the spectacular scientific achievements of our time After carefully analyzing the notion of rationality and examining how the skill of rationality is being challenged by postmodern culture J Wentzel van Huyssteen argues that it is precisely the problem of rationality that holds the key to understanding the complex forces shaping the radically different domains of religion and science today

Spiritual Information Charles L. Harper, 2005-06 Spiritual Information is a collection of one hundred essays that explore a portion of the vast interdisciplinary approaches to the study of science and religion Individually and together the essays show how the study of ourselves our planet and the universe helps us understand our place as spiritual beings within God's universe The book is a tribute to Sir John Templeton and his pioneering commitment toward new research that results in one hundredfold more spiritual information than humankind has ever possessed before It begins with essays that reflect on Sir John's principal domains of interest and expertise free enterprise based finance and accelerating spiritual progress Themes of the sections are Science Religion Dialogue Cosmology Physics and Astronomy Mathematics Musicology and Speculation Biological Evolution the Human Being Social Evolution the Human Mind and Heart Religion and Health The Nature of the Divine Theology and Philosophy Faith Traditions Sir John's leadership has enabled us to edge ever closer to the frontier where knowledge meets wisdom at the threshold of ultimate reality notes the editor in the preface to this volume As Spiritual Information presents an overview of how far we have come in the science and religion dialogue it also opens windows to the vast possibilities for additional research and further advances in spiritual information

New Directions in Theology and Science Peter Harrison, Paul Tyson, 2022-01-31 This book sets out a new agenda for science theology interactions and offers examples of what that agenda might look like when implemented It explores in innovative ways what follows for science theology discussions from recent developments in the history of science The contributions take seriously the historically conditioned nature of the categories science and religion and consider the ways in which these categories are reinforced in the public sphere Reflecting on the balance of power between theology and the sciences the authors demonstrate a commitment to moving beyond traditional models of one sided dialogue and seek to give theology a more active role in determining the interdisciplinary agenda

The Idea of Biblical Theology As a Science and As a Theological Discipline Geerhardus Vos, 2016-03-11 Every discussion of what is to be understood by Biblical Theology ought to proceed from a clear understanding of what Theology is in general Etymology in many cases a

safer guide than a priori constructions tells us that Theology is knowledge concerning God and this primitive definition is fully supported by encyclopedic principles Only when making Theology knowledge concerning God do we have the right to call it a separate science Sciences are not formed at haphazard but according to an objective principle of division As in general science is bound by its object and must let itself be shaped by reality so likewise the classification of sciences the relation of the various members in the body of universal knowledge has to follow the great lines by which God has mapped out the immense field of the universe The title of a certain amount of knowledge to be called a separate science depends on its reference to such a separate and specific object as is marked off by these God drawn lines of distinction We speak of a science of Biology because God has made the phenomena of life distinct from those of inorganic being Now from this point of view we must say that no science has a clearer title to separate existence than Theology Between God as the Creator and all other things as created the distinction is absolute There is not another such gulf within the universe God as distinct from the creature is the only legitimate object of Theology History of the Warfare of Science with Theology in Christendom Andrew Dickson White, 2008-05-01 **No God, No Science** Michael Hanby, 2013-02-25 No God No Science Theology Cosmology Biology presents a work of philosophical theology that retrieves the Christian doctrine of creation from the distortions imposed upon it by positivist science and the Darwinian tradition of evolutionary biology Argues that the doctrine of creation is integral to the intelligibility of the world Brings the metaphysics of the Christian doctrine of creation to bear on the nature of science Offers a provocative analysis of the theoretical and historical relationship between theology metaphysics and science Presents an original critique and interpretation of the philosophical meaning of Darwinian biology
