

There are seven passages with a total of 40 questions. Three sections are Data Representation with 5 questions each (15 total.) Three sections are Research or Experimental Reasoning with 6 questions each (18 total) and one section is Conflicting or Alternative View Point with 7 questions.

DATA REPRESENTATION SECTION

These are usually the easiest sections because they mostly deal with interpreting data. You may want to do these three sections first. You will be required to draw some inferences from the data, but do not use outside information. These passages have charts, graphs, pictures, illustrations, etc. and the objective is to test your ability to process graphical information and to interpret or make judgments about this information. Basic strategies include:

- 1) Don't get bogged down with every minute detail. Note the KEY details. Get the basic gist of what's happening. What does the figure show? What units of measurement are used?
- 2) Be particularly critical of key differences and similarities between the various graphs, charts, etc. Does a pattern emerge? What are critical change points?
- 3) Take advantage of the easy first and second questions. These are usually the most straightforward, basic questions the science portion. These questions direct you to exact areas of the passage and are similar to specific detail questions in the reading section.
- 4) Know what exactly is being measured in the legends, keys, etc. Look for extreme measurements. Ignore jargon or useless information not related to the questions. Complex concepts or equations may be included, but if they are not needed to answer the questions, forget about them.
- 5) Note labels of axes. Note quantities and how they are measured.
- 6) Make informal guesses about what might or should happen if you project into future. Can you make any logical correlations? Are some things not related?
- 7) Translate graphs into words so that you can understand the info so you can answer questions. Understand the independent and dependent variables.
- 8) You will be required to go "one step beyond." You will be asked to determine a goal or future event that could possibly be achieved from this data.
