## **Science And Society The John C Polanyi Nobel Laureates Lectures:**

**Science and Society** J. C. Polanyi, 1995 Presents the lectures given by eleven Nobel Laureates which enlighten us on scientific problems and discoveries while bringing to light the importance of their fields      **The Story of Chemistry** N. C. Datta, 2005 Chemistry touches every aspects of our life but we are largely ignorant of it A general reader has access to many popular books in the various areas of physics and astronomy but in the area of chemistry there is virtually no accessible material One common perception is that chemistry is a difficult subject which is partially true      **History Under Debate** Lawrence J Mc Crank, Carlos Barros, 2013-05-13 Examine new trends in the writing of new history and what they mean to information science History has been devalued causing a lack of career prospects for historians a decrease in vocations to the history profession and historical discontinuity between generations History Under Debate International Reflection on the Discipline is a recap of the crucial Second International Historia a Debate conference held on July 17 1999 in Santiago de Compostela This book details the comparative critical perspectives on history historians their audiences and the coming trends that will inevitably impact information science The in depth examination provides innovative approaches to historians as they redefine their discipline in relation to the global society of the new millennium while presenting invaluable insights for librarians social scientists and political scientists History Under Debate International Reflection on the Discipline examines how the writing of history in the twenty first century is revitalized by international comparative historiography thanks to new technologies and the multinational integration processes in economy politics culture and academics The first section discusses the Historia a Debate HaD Forum and Movement detailing the need for change to restore history as a vital global subject in modern times The remainder of the book consists of reflective and comparative views on the study of history and historiography as well as history in and about Spain and its relation to the rest of the world The book explores new ways for moving the discipline beyond sources and source criticism alone to a different concept of the historical profession as a science with a human subject that discovers the past as people construct it Included in this book is the English translation of the HaD Manifesto a proposal designed to unify historians of the twenty first century and ensure a new dawn for history its writings and its teachings History Under Debate International Reflection on the Discipline includes vital discussions on Linguistic Turn Postmodernism and Deconstruction gender studies and social history objectivity and subjectivity in historical interpretation multiple views of history from differing times and places history as criticism literature and reconstruction History Under Debate International Reflection on the Discipline is an essential resource that teaches historians librarians social scientists and humanists how to use cross border development and new global historiographic networks to bring hope for a future in history      **Hierarchical Genome And Differentiation Waves, The: Novel Unification Of Development, Genetics And Evolution (In 2 Volumes)** Richard Gordon, 1999-07-12 Over the past few decades numerous scientists have called for a unification of the fields of embryo development genetics and evolution Each field has glaring holes in its ability to

explain the fundamental phenomena of life In this book the author shows how the phenomenon of cell differentiation considered in its temporal and spatial aspects during embryogenesis provides a starting point for a unified theory of multicellular organisms plants fungi and animals including their evolution and genetics This unification is based on the recent discovery of differentiation waves by the author and his colleagues described in the appendices and illustrated by a flip movie prepared by a medical artist To help the reader through the many fields covered a glossary is included This book will be of great value to the researcher and practicing doctors scientists alike The research students will receive an in depth tutorial on the topics covered The seasoned researcher will appreciate the applications and the gold mine of other possibilities for novel research topics [The Biosphere and Noosphere Reader](#) David Pitt,Paul R. Samson,2012-10-02 Foreword written by Mikhail S Gorbachev Reproduction of work previously unpublished in English Combines new writing with traditional classics alongside **Is Future Given?** Ilya Prigogine,2003 In this book after discussing the fundamental problems of current science and other philosophic concepts beginning with controversies between Heraclitus and Parmenides Ilya Prigogine launches into a message of great hope the future has not been determined Contrary to globalisation and the apparent contemporary mass culture society individual behaviour is beginning to increasingly become the key factor which governs the evolution of both the world and society as a whole It is a message that challenges existing widespread views implicitly or explicitly through mass communication moreover the importance of the individual s actions implies a reflection of each person on the responsibilities that each one assumes when taking or acting upon a decision This responsibility is associated with the freedom of thought as well as a critical analysis of fashions customs preconceived ideas and ideologies externally imposed exactly contrary to the ideas of those who wish us to be perfect consumers in a world dominated only by monetary wealth Challenging this drive towards the elimination of freedom of thought in the individual is now imperative if we are to save man and his planet from catastrophe which seems to be ever imminent and unfortunately irreversible This last book of Ilya Prigogine provides a small disputable but nonetheless valuable contribution towards that end **Historical Distillates** Adrian G. Brook,W.A.E. (Peter) McBryde,2007-03-24 Historical Distillates examines the history of the Chemistry Department at the University of Toronto from its beginnings in 1843 when it was housed in simple quarters in the Parliament Buildings on Front Street and had just one faculty member During the founding era 1843 1920 three British gentlemen professors guided the department through four homes between 1920 and 1960 three Canadian heads built a highly influential department Since 1960 eight chairmen have effectively managed a growing and diverse department while it ventured into exciting new fields and emerging sub disciplines New colleges and a Nobel Prize have been highlights of the past two decades With the completion of recent renovations and additions such as the Davenport Research Building and Garden with its distinguished faculty top rate staff and excellent students and with its dazzling array of equipment to support research the department s future indeed looks bright **Selling Out** Howard Woodhouse,2009-09-01 Selling Out

demonstrates that the logics of value of the market and of universities are not only different but opposed to one another By introducing the reader to a variety of cases some well known and others not Woodhouse explains how academic freedom and university autonomy are being subordinated to corporate demands and how faculty have attempted to resist this subjugation He argues that the mechanistic discourse of corporate culture has replaced the language of education subject based disciplines and the professors who teach them have become resource units students have become educational consumers and curricula have become program packages Graduates are now products and competing in the global economy has replaced the search for truth

**Écoscience** ,1999      *Michael Polanyi and His Generation* Mary Jo Nye,2013-07-30 In *Michael Polanyi and His Generation* Mary Jo Nye investigates the role that Michael Polanyi and several of his contemporaries played in the emergence of the social turn in the philosophy of science This turn involved seeing science as a socially based enterprise that does not rely on empiricism and reason alone but on social communities behavioral norms and personal commitments Nye argues that the roots of the social turn are to be found in the scientific culture and political events of Europe in the 1930s when scientific intellectuals struggled to defend the universal status of scientific knowledge and to justify public support for science in an era of economic catastrophe Stalinism and Fascism and increased demands for applications of science to industry and social welfare At the center of this struggle was Polanyi who Nye contends was one of the first advocates of this new conception of science Nye reconstructs Polanyi s scientific and political milieus in Budapest Berlin and Manchester from the 1910s to the 1950s and explains how he and other natural scientists and social scientists of his generation including J D Bernal Ludwik Fleck Karl Mannheim and Robert K Merton and the next such as Thomas Kuhn forged a politically charged philosophy of science one that newly emphasized the social construction of science

To Light Such a Candle Keith James Laidler,1998 In *To light such a candle* renowned chemist and science historian Keith Laidler examines the progress of science and technology over the centuries tracing the often separate paths of these pursuits showing how they have ultimately worked together to transform everyday life Faraday s pure research on electricity for example had immense technological implications while Maxwell s theory of electromagnetic radiation led directly to the discovery of radio transmission something of which Maxwell himself had no conception Conversely the early steam engines were by no means science based but they led directly to the science of thermodynamics one of the most fundamental branches of pure science Illuminated by many fascinating stories from the history of science this book provides a powerful argument for the relevance of pure research and gives the general reader and scientist alike an idea of the nature and importance of the links between science and technology
