Science And The Quest For Reality:

Science and the Quest for Reality Alfred I Tauber, 1997 Since Galileo critics have waged a relentless assault against science attacking it as dehumanizing reductionist relativistic dominating and imperialistic Supporters meanwhile view science as synonymous with modernity and progress The current debates over the role of science described by such headlines as Scientists are Urged to Fight Back Against Politically Correct Critics in The Chronicle of Higher Education testify to how deeply divided we remain about the values and responsibilities of science in the modern age Acknowledging the validity of a deep skepticism about science but eager to preserve its strengths and values Alfred I Tauber's anthology seeks to avoid an either/or configuration Science Tauber argues is fundamentally pluralistic and must accept detracting criticism as part of its very code in the hope that in its defense the scientific enterprise is strengthened and reaffirmed Featuring essays by a wide range of interdisciplinary classical and contemporary thinkers such as Martin Heidegger Thomas Kuhn Hilary Putnam Evelyn Fox Keller and Max Weber the work is divided into five parts science and its worldview the problem of scientific realism the nature of scientific change the boundaries of science and science and values Reality, Science and the Sanatan Dr. Sharad S. Chauhan, 2024-02-29 Explore the captivating confluence of ancient wisdom and modern science in Reality Science and Sanatan Authored by a seasoned police officer and medical graduate this ground breaking exploration unveils the profound connections between Sanatan philosophy and contemporary Science and physics Sanatan philosophy stands out for its profound depth and striking parallels with modern science owing to the extraordinary gifts of ancient Indians a remarkable capacity for abstraction mastery in mathematics and the precision of Sanskrit as a perfect language for expression In a commendable and rare feat the author with dual expertise in medicine and law enforcement defies conventions Few contemporaries dare to venture where ancient philosophy meets the frontiers of modern science making this literary endeavour an extraordinary achievement Brace yourself to expand your mind and challenge preconceptions in a world that defies understanding as this unique journey beckons you to unravel the mysteries of existence

The Realities of Reality - Part II: Making Sense of Why Modern Science Advances (Volume 1) Fritz Dufour, MBA, DESS, 2018-09-19 This Volume 1 of Part II considers the factors that make science progress It lays out the differences between normal science and pseudoscience by showing the importance of the scientific method in the advancement of science It introduces the concept of Truth in science by raising the point that even though truth is based on the scientific method can science be true Can it depict reality The author focuses on modern science which he thinks was born thanks to the Scientific Revolution which started with Galileo Galilei and led to the Industrial Revolution The impacts of the latter is analyzed in light of modernism modernization and modernity all three linked to scientific progress The book also talks about the Newtonian scientific leap by analyzing particularly the then social and political fabrics of England and Albert Einstein by showing how he changed history According to the author our very physical world can help us understand scientific progress

So he explains among other things the structure of atoms and molecules the role of physics in the understanding of our universe Quantum Mechanics and the importance of Higgs Boson On the other hand the book is a stunning revelation of how important information is to scientific progress To make his point the author first talks about John Vincent Atanasoff as the Father of computer thanks to the invention of his ABC computer and then Alan Turing as the Father of modern computer thanks to his Turing Test and his views on Artificial Intelligence Both men played a momentous role in the Digital Revolution and in the Information Age according to the book Finally the author talks about nanotechnology which explores the world of small meaning at the atomic and the molecular levels and is an inescapable tool in the molecular biology revolution which itself is an important factor in scientific progress and in transhumanism or human enhancement defined as the ideology according to which man can surpass his present state by improving his genetic material

The Realities of 'Reality' - Part II: Making Sense of Why Modern Science Advances (Volume 2 of 2) Fritz Dufour, MBA, DESS, 2019-03-23 The difference between Part I and Part II Volumes 1 2 of this series is that in Part I the author showed how what we call reality starts with the inner self whereas Part II describes what in fact impacts and modifies the environment or reality and what are the factors behind that dynamics What impacts and modifies the environment is science This Volume 2 starts by showing how technology plays an important role in scientific progress Although the relationship between the two is symbiotic science can exist without technology but technology desperately needs science Military technology is an example of how technology can help science advance Some military inventions end up having civilian use Science being at the center of society the book makes the case for the direct impact of such social sciences as politics and economics on the advancement of science Politics says the author influences science because of uncertainty in science and economics does it thanks to the availability of money to scholars and scientists for their research On the other hand government also influences scientific progress through regulations The book gives cyberspace regulation as an example Furthermore by showing how art influences science the author really argues for the polyfactorial aspect of scientific progress In that line of thought he goes on to also prove that factors such as skepticism curiosity and the quest for knowledge greatly influence the advancement of science That says the author is a ninety degree turn By ending Part two that way I wanted to somehow link it to Part I which argues that reality starts from within
