Science In A Renaissance Society:

Science in a Renaissance Society William Persehouse Delisle Wightman, 1972 A historical study of the interrelations of science and society from c 1450 to c 1620 Printing medicine and the discovery of the New World are considered against a background of political and religious change The final chapters emphasize the influence of quantification the concern with natural magic and the psychological motivation of such leading figures in the so called Scientific Revolution as Kepler Gilbert and Bacon The Reenchantment of the World Morris Berman, 1981 Morris Berman's book addresses what I consider to be

the most important topic at our present moment in history He is searching for the underpinnings of a new world view that can give rise to a culture capable of relating gently and self sustainingly to the earth Frederick Ferr The Reenchantment of the World is a perceptive study of our scientific consciousness and a cogent and forceful challenge to its supremacy Focusing on the rise of the mechanistic idea that we can know the natural world only by distancing ourselves from it Berman shows how science acquired its controlling position in the consciousness of the West He analyzes the holistic animistic tradition destroyed in the wake of Scientific Revolution of the sixteenth and seventeenth centuries which viewed man as a participant in the cosmos not as an isolated observer Arguing that the holistic world view must be revived in some credible form before we destroy our society and our environment he explores the possibilities for a consciousness appropriate to the modern era Ecological rather than animistic this new world view would be grounded in the real and intimate connection between man and nature **Science in the Renaissance** Clarisse Doris Hellman, 1955 *The Palace Academy of Henry III* Robert J.

Sealy, 1981 *Paracelsus* Andrew Weeks, 1997-01-01 Paracelsus is commonly regarded as one of the great figures of sixteenth century Europe and of German intellectual history This book examines the content of his writings in order to clarify it and its historical context **Creational Theology and the History of Physical Science: The Creationist Tradition**

from Basil to Bohr Christopher B. Kaiser, 2021-12-06 This volume documents the role of creational theology in discussions of natural philosophy medicine and technology from the Hellenistic period to the early twentieth century Four principal themes are the comprehensibility of the world the unity of heaven and earth the relative autonomy of nature and the ministry of healing Successive chapters focus on Greco Roman science medieval Aristotelianism early modern science the heritage of Isaac Newton and post Newtonian mechanics The volume will interest historians of science and historians of the idea of creation It simultaneously details the persistence of tradition and the emergence of modernity and provides the historical background for later discussions of creation and evolution *Science, Art and Nature in Medieval and Modern Thought* A.C.

Crombie, 1990-07-01 The author sees the history of Western Science as the history of a vision and an argument initiated by the ancient Greeks in their search for principles at once of nature and of argument itself This scientific vision explored and controlled by argument and the diversification of both vision and argument by scientific experience and by interaction with the wider contexts of intellectual culture constitute the long history of European scientific thought Underlying that

development have been specific commitments to conceptions of nature and of science and its intellectual and moral assumptions accompanied by a recurrent critique their diversification has generated a series of different styles of scientific thinking and of making theoretical and practical decisions which the work describes *Science and the Secrets of Nature* William Eamon, 2020-06-30 By explaining how to sire multicolored horses produce nuts without shells and create an egg the size of a human head Giambattista Della Porta's *Natural Magic* 1559 conveys a fascination with tricks and illusions that makes it a work difficult for historians of science to take seriously Yet according to William Eamon it is in the how to books written by medieval alchemists magicians and artisans that modern science has its roots These compilations of recipes on everything from parlor tricks through medical remedies to wool dyeing fascinated medieval intellectuals because they promised access to esoteric secrets of nature In closely examining this rich but little known source of literature Eamon reveals that printing technology and popular culture had as great if not stronger an impact on early modern science as did the traditional academic disciplines *Art and Science* Stephen Richards Graubard, 1986 This volume brings together a distinguished collection of thinkers to consider the complex relation and divergence between art and science How art and science relate to technology why they should be thought relevant to morality and what their study can possibly contribute to the understanding of the nature of the mind are only a few of the subjects explored in these pages **"On Second Thought" and Other Essays in the History of Medicine and Science** Owsei Temkin, 2002-01-11 Over the course of a career spanning most of the twentieth century distinguished historian Owsei Temkin has argued passionately for the necessity of chronicling and analyzing the history of medicine The essays presented in this book span Dr Temkin's career bringing together new pieces and many previously unavailable outside the journals in which they were originally published Here the reader will find new thoughts and ideas that deviate from Dr Temkin's earlier beliefs and reflect a lifetime of research into the historical and ethical foundations of modern medicine *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1971 First multi year cumulation covers six years 1965-70 **The New Cambridge Bibliography of English Literature: Volume 1, 600-1660** George Watson, Ian Roy Willison, 1974-08-29 More than fifty specialists have contributed to this new edition of volume 1 of *The Cambridge Bibliography of English Literature* The design of the original work has established itself so firmly as a workable solution to the immense problems of analysis articulation and coordination that it has been retained in all its essentials for the new edition The task of the new contributors has been to revise and integrate the lists of 1940 and 1957 to add materials of the following decade to correct and refine the bibliographical details already available and to re shape the whole according to a new series of conventions devised to give greater clarity and consistency to the entries *Mapping the Dynamics of Science and Technology* Michel Callon, 1986-09-08 This book is a collection of works regarding the interactions of science technology and society *Galileo Goes to Jail and Other Myths about Science and Religion* Ronald L. Numbers, 2010-11-08 Ronald Numbers has recruited the

leading scholars in this new history of science to puncture the myths from Galileo's incarceration to Darwin's deathbed conversion to Einstein's belief in a personal God who didn't play dice with the universe Each chapter in *Galileo Goes to Jail* shows how much we have to gain by seeing beyond the myths

Merchants and Marvels Pamela Smith, Paula Findlen, 2013-10-18 The beginning of global commerce in the early modern period had an enormous impact on European culture changing the very way people perceived the world around them *Merchants and Marvels* assembles essays by leading scholars of cultural history art history and the history of science and technology to show how ideas about the representation of nature in both art and science underwent a profound transformation between the age of the Renaissance and the early 1700s

The Mystical Science of the Soul Jessica A. Boon, 2012-12-07 *The Mystical Science of the Soul* explores the unexamined influence of medieval discourses of science and spirituality on *recogimiento* the unique Spanish genre of recollection mysticism that served as the driving force behind the principal developments in Golden Age mysticism Building on recent research in medieval optics physiology and memory in relation to the devotional practices of the late Middle Ages Jessica A Boon probes the implications of an embodied soul for the intellectual history of Spanish mysticism Boon proposes a fundamental rereading of the key *recogimiento* text *Subida del Monte Si n* 1535 1538 which melds the traditionally distinct spiritual techniques of moral self examination Passion meditation and negative theology into one cognitively adept path towards mystical union She is also the first English language scholar to treat the author of this influential work the Renaissance physician Bernardino de Laredo a pivotal figure in the transition from medieval to early modern spirituality on the Iberian peninsula and a source for Teresa of Avila's

mystical language Medicine Before Science Roger Kenneth French, 2003-02-20 This book offers an introduction to the history of university trained physicians from the middle ages to the eighteenth century Enlightenment These were the elite in reputation and rewards and they were successful Yet we can form little idea of their clinical effectiveness and to modern eyes their theory and practice often seems bizarre But the historical evidence is that they were judged on other criteria and the argument of this book is that these physicians helped to construct the expectations of society and met them accordingly
