Governance as a Trialogue: Government-Society-Science in Transition Anthony R. Turton, Johanna Hanlie Hattingh, Gillian A. Maree, Dirk J. Roux, Marius Claassen, Wilma F. Strydom, 2007-02-16 The last two decades have been marked by a dramatic increase in global attention to the concept of governance especially in relation to the effective and sustainable management of natural resources During this period issues of water governance have received particular attention for example in relation to the provision of reliable water supplies as a catalyst for poverty eradication Within the context of the Millennium Development Goals and against a backdrop of an increasing frequency of water crises ranging from widespread flooding to severe water scarcity it is essential that each country and particularly those countries that face development challenges should be in a position to ensure that access to water is available to those who need it most This issue has been highlighted by the Global Water Partnership which stated that the water crisis facing the world is in reality a crisis of governance The South African political environment has changed dramatically in recent years and the central concepts of social equity and the right to a healthy environment are now entrenched in the country's Constitution These concepts are supported by several new laws in particular the National Environmental Management Act and the National Water Act which in turn are based on the principles of sustainable development However despite the highly desirable attributes of these landmark pieces of legislation South African authorities are still struggling to implement the requirements of these Acts almost a decade after their promulgation

**Science Cultivating Practice** H. Maat, 2013-04-17 Science Cultivating Practice is an institutional history of agricultural science in the Netherlands and its overseas territories The focus of this study is the variety of views about a proper relationship between science and agricultural practice Such views and plans materialised in the overall organisation of research and education Moreover the book provides case studies of genetics and plant breeding in the Netherlands colonial rice breeding and agricultural statistics Ideas affected the organisation as much as the other way round The net result was an institutional development in which the values of academic science were rated higher than the values of practice This book is a distinctive piece of work as it treats the dynamics of science in a European as well as in a colonial context These different ecological and social environments lead to other forms of knowledge and experimentation as well as other ways of organising science      Government, Science, & International Policy Panel on Science and Technology, United States.
