**Massimo Mazzotti**

## Science Of History:

*An Introduction to the Historiography of Science* Helge Kragh, 1987 This book introduces the methodological and philosophical problems with which modern history of science is concerned offering a comprehensive and critical review through description and evaluation of significant historiographical viewpoints Incorporating discussion of key problems in general historical writing with examples drawn from a range of disciplines this non elementary introduction bridges the gap between general history and history of science Following a review of the early development of the history of science the theory of history as applied to science history is introduced examining the basic problems which this generates including problems of periodisation ideological functions and the conflict between diachronical and anachronical historiography Finally the book considers the critical use and analysis of historical sources and the possibility of the experiential reconstruction of history Aimed primarily at students the book s broad scope and integration of historical philosophical and scientific matters will interest philosophers sociologists and general historians for whom there is no alternative introduction to the subject at this level

**The Science of History** William J. Chandler, 1984

**The Cambridge History of Science: Volume 3, Early Modern Science** David C. Lindberg, Katharine Park, Ronald L. Numbers, Roy Porter, 2003 An account of European knowledge of the natural world c 1500 1700

**The History of Science** Massimo Mazzotti, 2020

**A Little History of Science** William Bynum, 2012-11-06 A spirited volume on the great adventures of science throughout history for curious readers of all ages

**From Natural Philosophy to the Sciences** David Cahan, 2003-09-15 During the nineteenth century much of the modern scientific enterprise took shape scientific disciplines were formed institutions and communities were founded and unprecedented applications to and interactions with other aspects of society and culture occurred In this book eleven leading historians of science assess what their field has taught us about this exciting time and identify issues that remain unexamined or require reconsideration They treat both scientific disciplines biology physics chemistry the earth sciences mathematics and the social sciences in their specific intellectual and sociocultural contexts as well as the broader topics of science and medicine science and religion scientific institutions and communities and science technology and industry Providing a much needed overview and analysis of a rapidly expanding field *From Natural Philosophy to the Sciences* will be essential for historians of science but also of great interest to scholars of all aspects of nineteenth century life and culture Contributors Bernadette Bensaude Vincent Jed Z Buchwald David Cahan Joseph Dauben Frederick Gregory Michael Hagner Sungook Hong David R Oldroyd Theodore M Porter Robert J Richards Ulrich Wengenroth

[The Science of History in Victorian Britain](#) Ian Hesketh, 2016-09-12 New attitudes towards history in nineteenth century Britain saw a rejection of romantic literary techniques in favour of a professionalized scientific methodology The development of history as a scientific discipline was undertaken by several key historians of the Victorian period influenced by German scientific history and British natural philosophy This study examines parallels between the professionalization of both history and

science at the time which have previously been overlooked Hesketh challenges accepted notions of a single scientific approach to history Instead he draws on a variety of sources monographs lectures correspondence from eminent Victorian historians to uncover numerous competing discourses *A Short History of Science to the Nineteenth Century* Charles Singer,1941 **Philosophy, Science, and History** Lydia Patton,2014-06-27 Philosophy Science and History A Guide and Reader is a compact overview of the history and philosophy of science that aims to introduce students to the groundwork of the field and to stimulate innovative research The general introduction focuses on scientific theory change assessment discovery and pursuit Part I of the Reader begins with classic texts in the history of logical empiricism including Reichenbach's discovery justification distinction With careful reference to Kuhn's analysis of scientific revolutions the section provides key texts analyzing the relationship of HOPOS to the history of science including texts by Santayana Rudwick and Shapin and Schaffer Part II provides texts illuminating central debates in the history of science and its philosophy These include the history of natural philosophy Descartes Newton Leibniz Kant Hume and du Ch telet in a new translation induction and the logic of discovery including the Mill Whewell debate Duhem and Hanson and catastrophism versus uniformitarianism in natural history Playfair on Hutton and Lyell de Buffon Cuvier and Darwin The editor's introductions to each section provide a broader perspective informed by contemporary research in each area including related topics Each introduction furnishes proposals including thematic bibliographies for innovative research questions and projects in the classroom and in the field

**Reader's Guide to the History of Science** Arne Hessenbruch,2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn **A Shorter History of Science** William Cecil Dampier Dampier,1959 **Political Science in History** James F. Farr,James Farr,John S. Dryzek,Stephen T. Leonard,1995-04-28 In this volume scholars take up the challenge of disciplinary history by exploring the themes and movements that have shaped political science today [A History of Science](#) Henry Smith Williams,2017-07-30 The history of science is the study of the development of science and scientific knowledge including both the natural sciences and social sciences The history of the arts and humanities is termed as the history of scholarship Science is a body of empirical theoretical and practical knowledge about the natural world produced by scientists who emphasize the observation explanation and prediction of real world phenomena Historiography of science in contrast studies the methods by which historians study the history of science Empirical investigations of the natural world have been described since classical antiquity for example by Thales and Aristotle and scientific method has been employed since the Middle Ages for example by Ibn al Haytham and Roger Bacon modern science began to develop in the early modern period and in particular in the scientific revolution of 16th and 17th century Europe From the 18th century

through late 20th century the history of science especially of the physical and biological sciences was often presented in a progressive narrative in which true theories replaced false beliefs *Positioning the History of Science* Kostas Gavroglu, Jürgen Renn, 2007-05-05 The present volume compiled in honor of an outstanding historian of science physicist and exceptional human being Sam Schweber is unique in assembling a broad spectrum of positions on the history of science by some of its leading representatives Readers will find it illuminating to learn how prominent authors judge the current status and the future perspectives of their field Students will find this volume helpful as a guide in a fragmented field that continues to be dominated by idiosyncratic expertise and that still lacks a methodical canon The essays were written in response to our invitation to explicate the views of the authors concerning the state of the history of science today and the issues we felt are related to its future Although not all the scholars invited to write have contributed an essay this volume can nevertheless be considered as a rather comprehensive survey of the present state of the history of science All the papers collected here reflect in one way or another the strong influence Sam Schweber exerted during the past decades in his gentle way on the history of science as well as on the lives of many of its protagonists worldwide All who have had the opportunity of encountering him have benefited from his advice benevolence and friendship Sam Schweber's intellectual taste his passion for knowledge and his erudition are all encompassing It therefore seemed fitting to honor him with a collection of essays of comparable breadth nothing less would suffice **History as a Social Science** F. Dovring, 2012-12-06 This essay has grown out of an attempt to find the answers to problems basically inherent in the making of historical research Widespread among humanists is a vagueness of concepts which many times makes it difficult or impossible to translate our way of thinking into the terms of natural science or vice versa It sounds sometimes as if humanistic studies were a world of its own rather than a part of the natural world we all live in How long can we go on believing that there are different kinds of knowledge To this conflict of theory another is added a feeling of urgency about cultural problems that are too often left to the future to solve History is not as some natural scientists tend to believe a matter of no practical consequence It is a virulent factor in political and social conflicts and a basic substance in the structure of our personalities The present dynamic epoch raises with particular stress the problem of understanding the conditioning influence which the past exercises upon the present in each particular community Such a substance is neither a toy for pastime hobbies nor an innocent weapon in the hands of dictators Which is then the responsibility of the historian both for what he does and for what he abstains from doing The necessity to stay independent in order to approach objectivity makes for no easy answer **The Past, Present, and Future of Integrated History and Philosophy of Science** Emily Herring, Kevin Jones, Konstantin Kiprijanov, Laura Sellers, 2019-05-14 Integrated History and Philosophy of Science iHPS is commonly understood as the study of science from a combined historical and philosophical perspective Yet since its gradual formation as a research field the question of how to suitably integrate both perspectives remains open This volume presents cutting edge research from junior iHPS scholars and

in doing so provides a snapshot of current developments within the field explores the connection between iHPS and other academic disciplines and demonstrates some of the topics that are attracting the attention of scholars who will help define the future of iHPS

**Science in History** John Desmond Bernal,1969 **Science in History** J. D. Bernal,2011 J D Bernal s monumental work Science in History was the first full attempt to analyse the reciprocal relations of science and society throughout history from the perfection of the flint hand axe to the hydrogen bomb In this remarkable study he illustrates the impetus given to and the limitations placed upon discovery and invention by pastoral agricultural feudal capitalist and socialist systems and conversely the ways in which science has altered economic social and political beliefs and practices The third volume of Science in History covers the twentieth century with chapters on the physical sciences and the biological sciences with their impact on agriculture and medicine This stupendous work is a magnificent synoptic view of the rise of science and its impact on society which leaves the reader awe struck by Professor Bernal s encyclopedic knowledge and historical sweep Times Literary Supplement

History of Science, History of Text Karine Chemla,2004 This book explores the hypothesis that the types of inscription or text used by a given community of practitioners are designed in the very same process as the one producing concepts and results The book sets out to show how in exactly the same way as for the other outcomes of scientific activity all kinds of factors cognitive as well as cultural technological social or institutional conjoin in shaping the various types of writings and texts used by the practitioners of the sciences To make this point the book opts for a genuinely multicultural approach to the texts produced in the context of practices of knowledge It is predicated on the conviction that in order to approach any topic in the history of science from a theoretical point of view it may be fruitful to consider it from a global perspective The book hence does not only gather papers dealing with geometrical papyri of antiquity sixteenth century French books in algebra seventeenth century scientific manuscripts and paintings eighteenth and nineteenth century memoirs published by European academies or scientific journals and Western Opera Omnia It also considers the problems of interpretation relating to reading Babylonian clay tablets Sanskrit oral scriptures and Chinese books and illustrations Thus it enables the reader to explore the diversity of forms which texts have taken in history and the wide range of uses they have inspired This volume will be of interest to historians philosophers of science linguists and anthropologists

**The Cambridge History of Science: Volume 8, Modern Science in National, Transnational, and Global Context** Hugh Richard Slotten,Ronald L. Numbers,David N. Livingstone,2020-04-09 This volume in the highly respected Cambridge History of Science series is devoted to exploring the history of modern science using national transnational and global frames of reference Organized by topic and culture its essays by distinguished scholars offer the most comprehensive and up to date nondisciplinary history of modern science currently available Essays are grouped together in separate sections that represent larger regions Europe Africa the Middle East South Asia East and Southeast Asia the United States Canada Australia New Zealand Oceania and Latin America Each of these regional groupings ends with a

separate essay reflecting on the analysis in the preceding chapters Intended to provide a balanced and inclusive treatment of the modern world contributors analyze the history of science not only in local national and regional contexts but also with respect to the circulation of knowledge tools methods people and artifacts across national borders
