Seminaire De Probabilites 1988 1989:

Séminaire de Probabilités XLIII Catherine Donati Martin, Antoine Lejay, Alain Rouault, 2010-10-28 This is a new volume of the Séminaire de Probabilités which is now in its 43rd year. Following the tradition, this volume contains about 20 original research and survey articles on topics related to stochastic analysis. It contains an advanced course of J. Picard on the representation formulae for fractional Brownian motion. The regular chapters cover a wide range of themes such as stochastic calculus and stochastic differential equations, stochastic differential geometry, filtrations, analysis on Wiener space, random matrices and free probability, as well as mathematical finance. Some of the contributions were presented at the Journées de Probabilités held in Poitiers in June 2009.

Seminaire de Probabilites XXIV 1988/89 Jacques Azema, Paul A. Meyer, Marc Yor, 2006-11-14 The different papers contained in this volume are all research papers. The main directions of research which are being developed are quantum probability, semimartingales and stochastic calculus.

Séminaire de Probabilités XXXVII Jacques Azéma, Michel Émery, Michel Ledoux, Marc Yor, 2003-12-10 *In Memoriam Paul-André Meyer - Séminaire de Probabilités XXXIX* Marc Yor, Michel Émery, 2006-10-17 The 39th volume of Séminaire de Probabilités is a tribute to the memory of Paul André Meyer. His life and achievements are recalled in this book and tributes are paid by his friends and colleagues. This volume also contains mathematical contributions to classical and quantum stochastic calculus, the theory of processes, martingales and their applications to mathematical finance and Brownian motion. These contributions provide an overview on the current trends of stochastic calculus.

Piccinini, 2006-11-14 Since the subject of Groups of Self Equivalences was first discussed in 1958 in a paper of Barcuss and Barratt a good deal of progress has been achieved. This is reviewed in this volume first by a long survey article and a presentation of 17 open problems together with a bibliography of the subject and by a further 14 original research articles.

Twistor Theory for Riemannian Symmetric Spaces Francis E. Burstall, John H. Rawnsley, 2006-11-14 In this monograph on twistor theory and its applications to harmonic map theory a central theme is the interplay between the complex homogeneous geometry of flag manifolds and the real homogeneous geometry of symmetric spaces. In particular flag manifolds are shown to arise as twistor spaces of Riemannian symmetric spaces. Applications of this theory include a complete classification of stable harmonic 2-spheres in Riemannian symmetric spaces and a Bäcklund transform for harmonic 2-spheres in Lie groups which in many cases provides a factorisation theorem for such spheres as well as gap phenomena. The main methods used are those of homogeneous geometry and Lie theory together with some algebraic geometry of Riemann surfaces. The work addresses differential geometers especially those with interests in minimal surfaces and homogeneous manifolds.

This book is an introduction to financial mathematics. The first part of the book studies a simple one period model which serves as a building block for later developments. Topics include the characterization of arbitrage free markets, preferences on asset profiles, an introduction to equilibrium analysis and monetary measures of risk. In the second part the idea of dynamic hedging of contingent claims is developed in a multiperiod framework. Such models are typically incomplete. They involve intrinsic risks which cannot be hedged away completely. Topics include martingale measures, pricing formulas for derivatives, American options, superhedging and hedging strategies with minimal shortfall risk. In addition to many corrections and improvements this second edition contains several new sections including a systematic discussion of law invariant risk measures and of the connections between American options, superhedging and dynamic risk measures.

Seminaire de

Probabilites XXXV J. Azema, M. Emery, M. Ledoux, M. Yor, 2004-10-21 Annotation: Researchers and graduate students in the theory of stochastic processes will find in this 35th volume some thirty articles on martingale theory, martingales and finance, analytical inequalities and semigroups, stochastic differential equations, functionals of Brownian motion and of L^vy processes. Ledoux's article contains a self contained introduction to the use of semigroups in spectral gaps and logarithmic Sobolev inequalities; the contribution by Emery and Schachermayer includes an exposition for probabilists of Vershik's theory of backward discrete filtrations.

Functional Analysis and Related Topics, 1991 Hikosaburo Komatsu, 2006-11-15 In these proceedings of the international conference held in Kyoto in memory of the late Professor Kôsaku Yosida twenty six invited speakers display in their many facets of functional analysis and its applications in the research tradition of Yosida's school. Many of the topics are related to linear and non linear partial differential equations including the Schrödinger equations, the Navier Stokes equations and quasilinear hyperbolic equations. Several of the papers are survey articles, the others are original unpublished and refereed research articles. Also included is a full listing of the publications of Kôsaku Yosida.

Recommended to students and research workers looking for a bird's eye view of current research activity in functional analysis and its applications.
