Since the revolution in philosophic method that began about a century ago the focus of philosophic attention has been on language as used both in daily conversation and in specialized institutional activities such as science law and the arts But language is an extremely complex and varied means of communication and the study of it has been increasingly incorporated into such empirical disciplines as linguistics psycho linguistics and cognitive psychology It is becoming less clear what aspects of language remain as proper subjects of philosophical study what are to be kicked upstairs J L Austin s phrase to the sciences This work is a study of those logical features of language that remain central to philosophy after completion of kicking up It conducts this study by describing similarities and differences between signs at differing levels starting with natural events as primitive signs in the environments of their interpreters and proceeding to pre linguistic signaling systems elementary forms of language and finally to the forms of specialized discourse used within social institutions The investigation of comparative features requires isolating basic mental capacities that are present in the most primitive forms of organisms capable of sign interpretation The problem then becomes one of tracing the emergence from these capacities of such categories as substance attribute or quality and quantity that we apply to natural languages The study of sign levels is thus the construction of a genealogy of logical categories marking the development of natural languages **Who's who in America** ,1995 Linguistics and Language Behavior Abstracts ,1987 *Cumulative Book Index* ,1998 A world list of books in the English language **Books in Print** ,1991 Verzeichnis lieferbarer Bücher ,2002 **Annotated Bibliography of New Publications in the Performing Arts** ,1974
