Sensory Mechanism Of The Spinal Cord:

Sensory Mechanisms of the Spinal Cord William D. Willis, Richard E. Coggeshall, 2004-01-31 Provides an historical and contemporary overview of an active field of neuroscience research on somato visceral sensation Medical and indirectly veterinary implications are emphasized Extensive revisions have been made since the last edition including the additional of two chapters Many significant literature citations have been added for the period since the last edition The illustration have been substantially expanded including a number that emphasize newly applied techniques

Sensory Mechanisms of the Spinal Cord William D. Willis, Richard E. Coggeshall, 1978 This monograph thoroughly examines the latest theory and research concerning spinal cord mechanisms of sensory processing The book begins with a historical review of the organization of the peripheral nervous system is outlined in terms of sensory receptors and primary afferent axons The authors examine the dorsal horn and the structure and function of dorsal horn interneurons and neurophysiological evidence concerning the location of sensory pathways in the spinal cord white matter After the dorsal column dorsolateral fasciculus and the ventral quadrant are covered the final chapter summarizes knowledge on receptors and spinal cord pathways of various sensations including touch pressure flutter vibration pain temperature position sense visceral sensation and descending control systems

Sensory Mechanisms of the Spinal Cord W. D. Willis, 2013-03-16 The goal of this monograph is to provide an overview of current thought about spinal cord mechanisms for sensory processing We hope that the book will be useful both to basic neuroscientists and to clinicians Some historical aspects of the problem and a few definitions are treated in the first chapter The second chapter reviews the organization of the peripheral nervous system from the standpoint of sensory receptors and primary afferent axons The third chapter is concerned with what is known about the structure of the dorsal horn while the fourth chapter considers the activity of dorsal horn interneurons The clinical behavioral and neurophysiological evidence for what parts of the cord white matter contain particular sensory pathways is discussed in Chapter 5 and details about the various pathways in the dorsal columns the dorsolateral fasciculus and the ventral quadrant form the subject matter of Chapters 6 through 8 The final chapter is an attempt to summarize what is presently known about the receptors and the spinal cord pathways responsible for the sensations of touch pressure flutter vibration pain temperature position sense and visceral sensation and about descending control systems

Sensory Mechanisms of the Spinal Cord William D. Willis Jr., Richard E. Coggeshall, 2013-06-29 The third edition of this monograph continues to have the goal of providing an overview of current thought about the spinal cord mechanisms that are responsible for sensory processing We hope that the book is of value to both basic and clinical neuroscientists Several changes have been made in the presentation as well as additions because of the research advances that have been made during the past decade Chapters 3 and 4 in the previous edition have been subdivided and now the morphology of primary afferent neurons of the dorsal root ganglia is described in Chapter 3 and the chemical neuroanatomy of these neurons in

Chapter 4 The description of the dorsal horn in the previous Chapter 4 is now included in Chapter 5 and the chemical neuroanatomy of the dorsal horn in Chapter 6 Furthermore discussions of the descending control systems have now been consolidated at the end of Chapter 12 The authors would like to express their appreciation for the help provided by several individuals R E C wishes to acknowledge the many things he learned about primary afferent neurons from conversations with Dr S N Lawson He also thanks Lyn Shilling for her assistance with the typing WDW thanks Dr Nada Lawand for her critical reading of parts of the manuscript Rosaline Leigh for help with the manuscript and Griselda Gonzales for preparing the illustrations

Sensory Mechanisms of the Spinal Cord William D. Willis Jr.,2013-06-29 As stated in the preface to the first edition the goal of this monograph is to provide an overview of current thought about the spinal cord mechanisms responsible for sensory processing We hope that the book will be of value to both basic neuroscientists and clinicians The organization of the monograph has followed the original plan in most respects although the emphasis has changed with respect to many topics because of recent advances In particular a substantial increase in the number of investigations of the dorsal root ganglion has led us to devote a chapter to this topic The treatment of chemical neuroanatomy in the dorsal horn as well as the relevant neuropharmacology has also been expanded considerably Another major emphasis is on the results of experiments employing microneurography in human subjects We thank Margie Watson and Lyn Schilling for their assistance with the typing and Griselda Gonzales for preparing the illustrations

Moore, Deborah Falla, Jeremy Lewis, Christopher McCarthy, Michele Sterling, 2015-05-11 Since the third edition of Grieve's Modern Manual Therapy was published in 2005 the original concepts of manipulative therapy have grown to embrace new research generated knowledge. Expansions in practice have adopted new evidence which include consideration of psychological or social moderators. The original manual therapy or manipulative therapy approaches have transformed into musculoskeletal physiotherapy and this is recognized by the change in title for the new edition Grieve's Modern Musculoskeletal Physiotherapy. Grieve's Modern Musculoskeletal Physiotherapy continues to bring together the latest state of the art research from both clinical practice and the related basic sciences which is most relevant to practitioners. The topics addressed and the contributing authors reflect the best and most clinically relevant contemporary work within the field of musculoskeletal physiotherapy. With this as its foundation and a new six strong editorial team at its helm the fourth edition now expands its focus from the vertebral column to the entire musculoskeletal system. For the first time both the spine and extremities are covered capturing the key advances in science and practices relevant to musculoskeletal physiotherapy. The book is divided into five parts containing multiple sections and chapters. The first part looks at advances in the sciences underpinning musculoskeletal physiotherapy practice. Here there is commentary on topics such as movement, the interaction between pain and motor control as well as neuromuscular adaptations to exercise. Applied anatomical structure is covered in addition to the challenges of lifestyle and ageing. A new section highlights the important area of measurement and presents the scope of current and emerging measurements for investigating central and peripheral aspects relating to pain, function and morphological change. Another section discusses some contemporary research approaches such as quantitative and qualitative methods as well as translational research. Part III contains sections on the principles of and broader aspects of management which are applicable to musculoskeletal disorders of both the spine and periphery. Topics include models for management, prescription, communication and pain management and contemporary principles of management for the articular, nervous and sensorimotor systems. In recognition of the patient centred and inclusive nature of contemporary musculoskeletal practice there is also discussion about how physiotherapists may use cognitive behavioural therapies when treating people with chronic musculoskeletal disorders. The final part of the book focuses on selected contemporary issues in clinical practice for a particular region, condition or the most topical approaches to the diagnosis and management of a region. A critical review of the evidence or developing evidence for approaches is given and areas for future work are highlighted. Presents state of the art manual therapy research from the last 10 years. Multidisciplinary authorship presents the viewpoints of different professions crucial to the ongoing back pain management debate. Highly illustrated and fully referenced.
