**Sensory Systems and Communication in Arthropods** Wiese, Gribakin, 2013-11-21      **Sensory Systems of Arthropods** Konrad Wiese, 1993      The Ecology of Animal Senses Gerhard von der Emde, Eric Warrant, 2015-12-16 The collection of chapters in this book present the concept of matched filters response characteristics matching the characteristics of crucially important sensory inputs which allows detection of vital sensory stimuli while sensory inputs not necessary for the survival of the animal tend to be filtered out or sacrificed The individual contributions discuss that the evolution of sensing systems resulted from the necessity to achieve the most efficient sensing of vital information at the lowest possible energetic cost Matched filters are found in all senses including vision hearing olfaction mechanoreception electroreception and infrared sensing and different cases will be referred to in detail      **Bioacoustics** ,1993      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1991      *Invertebrate Vision* Eric Warrant, Dan-Eric Nilsson, 2006-10-05 Publisher description      *Insect Biodiversity* Robert G. **Biocommunication of Animals** Guenther Witzany, 2013-11-08 Every coordination within or between animals depends on communication processes Although the signaling molecules vocal and tactile signs gestures and its combinations differ throughout all species according their evolutionary origins and variety of adaptation processes certain levels of biocommunication can be found in all animal species a Abiotic environmental indices such as temperature light water etc that

affect the local ecosphere of an organism and are sensed interpreted b Trans specific communication with non related organisms c Species specific communication between same or related species d Intraorganismic communication i e sign mediated coordination within the body of the organism This book gives an overview of the manifold levels of animal communication exemplified by a variety of species and thereby broadens the understanding of these organisms *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 **The Senses: A Comprehensive Reference**, 2020-09-30 The Senses A Comprehensive Reference Second Edition Seven Volume Set is a comprehensive reference work covering the range of topics that constitute current knowledge of the neural mechanisms underlying the different senses This important work provides the most up to date cutting edge comprehensive reference combining volumes on all major sensory modalities in one set Offering 264 chapters from a distinguished team of international experts The Senses lays out current knowledge on the anatomy physiology and molecular biology of sensory organs in a collection of comprehensive chapters spanning 4 volumes Topics covered include the perception psychophysics and higher order processing of sensory information as well as disorders and new diagnostic and treatment methods Written for a wide audience this reference work provides students scholars medical doctors as well as anyone interested in neuroscience a comprehensive overview of the knowledge accumulated on the function of sense organs sensory systems and how the brain processes sensory input As with the first edition contributions from leading scholars from around the world will ensure The Senses offers a truly international portrait of sensory physiology The set is the definitive reference on sensory neuroscience and provides the ultimate entry point into the review and original literature in Sensory Neuroscience enabling students and scientists to delve into the subject and deepen their knowledge All inclusive coverage of topics updated edition offers readers the only current reference available covering neurobiology physiology anatomy and molecular biology of sense organs and the processing of sensory information in the brain Authoritative content world leading contributors provide readers with a reputable dynamic and authoritative account of the topics under discussion Comprehensive style content in depth complex coverage of topics offers students at upper undergraduate level and above full insight into topics under discussion [Biology of Sensory Systems](#) C. U. M. Smith, 2008-11-20 Since publication of the first edition huge developments have taken place in sensory biology research and new insights have been provided in particular by molecular biology These show the similarities in the molecular architecture and in the physiology of sensory cells across species and across sensory modality and often indicate a common ancestry dating back over half a billion years Biology of Sensory Systems has thus been completely revised and takes a molecular evolutionary and comparative approach providing an overview of sensory systems in vertebrates invertebrates and prokaryotes with a strong focus on human senses Written by a renowned author with extensive teaching experience the book covers in six parts the general features of sensory systems the mechanosenses the chemosenses the senses which detect electromagnetic radiation other sensory systems including pain

**Sensory Systems of Animals** Mark Hollins, 2024-10-10

Perception in animals is a fascinating and challenging subject that calls to students from many disciplines The aim of this book is to provide a knowledge base and unifying perspective on the field that will enable beginning researchers to chart their own course within it The author describes in a systematic but engaging way the sensory systems of humans and other vertebrates as well as arthropods and molluscs Why is it important to understand the senses of animals One reason is that human activities are changing the perceptual world of animals in ways that expose them to danger From bright outdoor lighting disorienting migrating birds to human sonar driving whales to beach themselves it is becoming increasingly important to find ways to reduce such dangers This will require big changes in human behavior and greater understanding of how animals react physiologically and behaviorally to anthropogenic changes in their environment The emphasis throughout is on research in both the behavioral ethological and neuroscientific traditions that has led to important discoveries The functional anatomy of each system from receptor cells to brain areas is succinctly described explaining how it underlies the animal's sensory abilities and behavior Overall descriptions of a sense for a class of animals for example hearing in arachnids are interspersed with expanded coverage of that sense in a particular animal such as the ogre faced web casting spider that does a backflip to capture an insect buzzing overhead Evolutionary themes are found throughout the book for example in describing the development of the vertebrate ear and in the convergent evolution of the eyes of vertebrates and cephalopods With over 500 references and 80 illustrations this textbook is primary reading intended for advanced undergraduates and beginning graduate students of veterinary science lab animal science and zoology It would also be of great interest to professionals and academics working with animals such as veterinary professionals and zookeepers

*Nervous Systems and Control of Behavior* Charles Derby, Martin Thiel, 2014-09-24 Crustacean Nervous Systems and their Control of Behavior is the

third volume of the series The Natural History of the Crustacea This volume is on the functional organization of crustacean nervous systems and how those nervous systems produce behavior It complements other volumes on related topics of feeding biology reproductive biology endocrine systems and behavioral ecology There is a rich history of the study of the neurobiology of crustaceans going back over 150 years This has included studies on how their nervous systems allow them to perform behaviors that are adapted to their particular environments as well as studying them as model organisms to understand basic biomedical principles about neural function such as sensory transduction and processing synaptic transmission and integration neuromodulation and learning and memory The volume has three sections that build progressively on each other The first section is on the basic organizational features of the crustacean nervous system and the principles upon which it is built The second section is on sensory ecology the organization of each sensory system and how it is used in intra and interspecific interactions within an ecological context The third section uses case studies of how crustacean nervous systems are organized to perform complex behaviors and interactions such as walking escape social interactions and memory and learning Taken together the 20 chapters synthesize our modern understanding of the neural control of behavior in crustaceans based on the most recent technologies in physiological recording molecular biology and computational science This volume will be useful to students and researchers as a concise summary of current knowledge of crustacean neuroscience
