Cancer Management of the Axilla in Patients with Node Positive Breast Cancer Prophylactic Bilateral Mastectomy and Contralateral Prophylactic Mastectomy Advances in Reconstruction of Mastectomy and Lumpectomy Defects Nipple Sparing Mastectomy and Breast Cancer Disparities **Clinical Scenarios in Surgical Oncology** Vijay P. Khatri, 2006 This unique case based review of surgical oncology offers excellent preparation for oral board examinations which emphasize both general knowledge and case management The book presents 91 cases structured to reflect the surgeon's decision making process Each case begins with a patient presentation and imaging studies or pathology results and proceeds through a series of decision points differential diagnosis requests for additional tests diagnosis surgical approach discussion of potential pitfalls and follow up Cases are grouped by organ system and each section ends with a treatment algorithm summarizing the decision points Nearly 400 radiologic images and other relevant illustrations accompany the text The M.D. Anderson Surgical Oncology Handbook Barry W. Feig, David H. Berger, George M. Fuhrman, University of Texas M.D. Anderson Cancer Center. Dept. of Surgical Oncology, 2006 Written by current and former surgical oncology fellows of the world renowned M D Anderson Cancer Center this portable handbook is a practical guide to established surgical oncology principles for each organ system This new Fourth Edition features extensive updates including new chapters on reconstructive surgery in the cancer patient Concise chapters illustrated with algorithms and line drawings outline the essential elements of diagnosis staging and clinical management of solid tumors treated in surgical practice The authors emphasize multidisciplinary treatment planning including therapy sequencing and biologic therapies *Surgical Oncology* Raphael E. Pollock, 1997-11-30 Among the standard oncology modalities surgical oncology is singular in that it lacks a separate board certification or even an added qualification mechanism Card carrying surgical oncologists are certified by the American Board of Surgery as are all other general surgeons What distinguishes the surgical oncologist is a set of cognitive skills rather than a specific armamentarium of surgical techniques This different conceptual framework is derived from extensive additional training that leads to an in depth understanding of the natural history and biologic behavior of the various solid tumor systems Equipped with this perspective the surgical oncologist is particularly well positioned to integrate the various available therapeutic modalities into a coherent care program for the solid tumor patient As a central theme the chapters of this book demonstrate that increasingly sophisticated diagnostic and staging approaches are helping to move chemotherapy and radiotherapy into the preoperative neoadjuvant setting This fundamental alteration is based on the awareness that even early stage solid tumor disease is frequently systemic at the time of presentation at least on a subclinical level And although the primary tumor may be controllable by surgery with radiotherapy the uncontrolled and initially clinically unapparent distant disease ultimately determines patient survival The other perspective driving the neoadjuvant approach is an emerging awareness that for most solid tumor systems neoadjuvant treatment responses can facilitate less mutilating surgery with comparable levels of local disease control **Comparative Effectiveness in Surgical Oncology** Karl Y.

Bilimoria, Christina A. Minami, David M. Mahvi, 2015-02-12 Despite tremendous recent advances in the treatment of most malignancies there remain several critical questions for each cancer This particularly true for the surgical management of solid organ malignancies Comparative effectiveness is a relatively new term which encompasses the age old concepts of how best to treat cancer patients Comparative effectiveness is defined as the direct comparison of healthcare interventions to determine which work best for which patients when considering the benefits and risks The Institute of Medicine has defined comparative effectiveness research CER as the generation and synthesis of evidence that compares the benefits and harms of alternative methods to prevent diagnose treat and monitor a clinical condition or to improve the delivery of care CER is certainly best done with well conducted randomized controlled trials Unfortunately clinical trials are not always feasible owing to the impracticality of conducting the trial the considerable cost and the time required to complete the trial These challenges are even more pronounced with respect to surgical treatment Thus alternative approaches may need to be considered in order to address pressing questions in the care of the oncology patient These approaches may include well conducted retrospective cohort studies from cancer registries and other data sources decision and cost effectiveness analyses and other novel methodologies This book lays out the current critical questions for each major malignancy and proposes approaches to gain answers to these pressing questions

New Technologies in Surgical Oncology Antonio Mussa, 2009-12-08 Oncological surgeons are often requested in their clinical practice to identify and manage uncommon and complex situations It is therefore of the utmost importance that they are well aware of the most recent technological evolutions in order to achieve the best possible results in term of oncological outcome with a concern on quality of life and economical issues Furthermore new techniques can give a fundamental contribution in overcoming the limitations of standard approaches An essential aim of this book is to underline the great importance and the need of an effective coordination of multi disciplinary care among surgeons medical oncologists radiation therapists plastic surgeons and ancillary services in order to optimise patient outcome
