Serology Of Conglutination Its Relatio:

The Serology of Conglutination and its Relation to Disease R.R.A. Coombs, Anne M. Coombs, D.G. Ingram, 1961

Pathology of Simian Primates, Part 2 R. N. Fiennes, 1972-04-24 Volume 4 Immunopathology Noel

Rose, 2013-06-29 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate system of cells and molecular moieties derived from these cells which constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology, biochemistry, phylogeny and ontogeny, physiology and pharmacology as well as clinical areas including immunopathology, cancer, infectious diseases, allergy and hypersensitivity. It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES, attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. The treatise editors and their editorial board, consisting predominantly of the editors of individual volumes, are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies. Current List of Medical Literature, 1958 Includes section Recent book acquisitions varies Recent United States publications formerly published separately by the U S Army Medical Library **Basic Immunology** E. R. Gold, D. B. Peacock, 2014-05-12 Basic Immunology focuses on substances that take part in serological reactions including antigens, antibodies and the physicochemical nature of immunological reactions. The selection first elaborates on the basic notions of immunity, antigens, immunoglobulins and the production of antibody. Discussions focus on factors which increase the immune response, production of antibody, biological properties of immunoglobulins, evolution and control of immunoglobulin structure, antigenicity, specific immunity and resistance. The text then takes a look at the complement system, antigen-antibody reactions and immediate hypersensitivity. The book ponders on cell-mediated immunity and delayed hypersensitivity, transplantation immunology and tumor immunology. Topics include production of immunity to neoplasms, immunological aspects of carcinogenesis and growth of established tumors, immunotherapy for experimental neoplasms, donor selection in human organ transplantation, elicitation of delayed hypersensitivity and the role of humoral factors in the transfer of delayed hypersensitivity. The selection is a valuable reference for medicine students and researchers interested in basic immunology. **Atlas of Immunology** Julius M. Cruse, Robert E.
