

ON A BOLIDE OF JANUARY 31st, THAT PASSED OVER KENTUCKY.

Amer. Jour. Science, xi, 1876, p. 458.

On the afternoon of the 31st of January, at five and one half o'clock, while crossing one of the streets of Louisville, my attention was suddenly arrested by a magnificent meteor crossing the heavens. I first saw it at 60° above the horizon, and it disappeared to my view behind the houses at an elevation of about 20° . It was pear-shaped and very bright, and remained in view for two or three seconds. Its apparent size was about one sixth that of the disk of the moon. It did not separate while under my observation, nor did I hear any noise. On asking through the medium of the public prints for the observations of others, I received some fifteen communications from an area of one hundred and twenty miles in diameter.

To a number of the observers an explosion was visible, producing several flashes of light of different colors. This occurred about ten degrees above the horizon. On exploding all the fragments disappeared instantly except the largest, which also disappeared before reaching the horizon. Some observers saw sparks flying off from the ball, and a short stream of light behind it. One or two think they heard a whizzing noise, and at the time of bursting heard the explosion. All agree in stating that the direction was from northwest to southeast. Nothing has yet been heard of any fragments having been collected. My opinion is that it fell about the range of the Cumberland Mountains in Kentucky, or in the northeast of Tennessee.

This is the third bolide, in three consecutive years, that it has been my good fortune to witness in its passage over Louisville, but the fragments of none of them have been obtained. They all were passing from the northward to southward.
