Melanocytic Neoplasms offers a dynamic text where readers will encounter a broad spectrum of challenging melanocytic lesions both benign and malignant and will thereby acquire a solid working knowledge that they can immediately apply to daily diagnosis. The authors aim to clarify this often thorny field keeping a steady focus on patient related issues. The volume emphasizes the practical application of basic morphologic principles immunohistochemistry and molecular methods in order to secure a confident diagnosis. Abundant illustrations display the characteristic features of the most important disease entities. Rather than being yet another encyclopedic work of reference this volume takes a fresh approach as it resembles a series of stimulating seminars employing exemplary case material to highlight illustrate and succinctly discuss the key points. To this end the reader will be guided through a series of paired cases that pose a significant diagnostic challenge. By comprehensively comparing and contrasting two related entities each such chapter will illuminate an intellectual pathway through which an important diagnostic puzzle can be solved. To broaden the differential diagnosis even further additional illustrative cases are added to each discussion. Algorithms and tables summarize key points. Clinically relevant up to date references will be provided to guide further study. Written by experts in the field this novel text will be of great value to surgical pathologists in practice and dermatologists as well as residents and fellows training in these specialties.
