Applied Pathology for Ophthalmic Microsurgeons Gottfried O.H. Naumann, L. Holbach, F.E. Kruse, 2008-04-05 Written and edited by the world famous expert G O H Naumann this textbook delves into the details of ocular structures such as the nuances of morphology surgical anatomy and pathology The text covers unique features of intraocular surgery in closed system and open eye contexts It goes on to cover crucial aspects of restoring the anterior chamber Then it delineates the spectrum of potential complications in pseudo exfoliation syndromes as well as the most vulnerable cell populations Readers are also treated to the features of normal and pathologic wound healing after non mechanical laser and mechanical inventions Brilliant artwork and sketches illustrate the complex pathology

Pathology of the Eye G.O.H. Naumann, D.J. Apple, 2012-12-06 It is indeed a pleasure to write a foreword for this spectacular book which represents a landmark in the history of ocular pathology Not since the three volumes of the Henke Lubarsch handbook appeared forty years ago has anything like this come on the market This book represents a comprehensive thorough and up to date clinically oriented textbook on ocular pathology We are all indebted to the senior author who is now professor of ophthalmology at the University of Erlangen who presents us here with the fruit of decades of industrious endeavors We also have to be grateful to the American ophthalmic pathologist Dr David Apple who as one of the main collaborators of the German edition has now provided us with the English translation The book has a twofold purpose First it is meant to be a source of instruction for ophthalmologists and pathologists For that purpose it is beautifully illustrated both by clinical pictures and by excellent photomicrographs and electromicroscopic pictures Most valuable from a didactic point of view are the colored schematic drawings and the many tables These two features are practically unique and should help any neophyte in grasping the principles of ocular pathology

Macroscopic Ocular Pathology Fritz H. Stefani, Gerhard Hasenfratz, 2012-12-06 Today ophthalmic pathology deals more and more with pathogenesis using highly sophisticated techniques In recent decades it has expanded to such an extent that it now fills several volumes of a modern comprehensive atlas or textbook Black and white prints of the macroscopic appearance of dissected eyes are standard in modern textbooks Color photographs although providing more visual information and a better insight into the sometimes complex disease processes of the eye are however costly Nevertheless many

ophthalmologic colleagues expressed their desire to have me prepare such an atlas. It is not intended to replace one of the textbooks in this field but rather to supplement existing texts and to stimulate clinical and diagnostic thinking. Hence it should be used in conjunction with textbooks on anatomy and ocular pathology. The reader will find references on the different subjects in the excellent modern textbooks listed below. Diagnosis and treatment in ophthalmology is to a great extent based on morphologic examination. Clinical ophthalmologists have available such excellent tools as the slit lamp, the gonioscope, and the ophthalmoscope to study and document ocular disease in vivo under high magnification. Both external eye structures and transparent ocular structures can be observed better in vivo than in the pathology laboratory. Therefore the pathology of these is only presented in conditions in which direct visualization is normally difficult.
