## **Pathogenesis Of Diabetics Mellitus:**

Molecular Pathology of Diabetes Mellitus R. D. G. Leslie, 1997 Diabetes already a prevalent disease worldwide is increasing at a rate consistent with a global epidemic The number of people affected is expected to double in the next 15 years to about 200 million The disease is already one of the commonest causes of kidney failure blindness and amputations There is an urgent need to prevent either the development of these complications or the disease itself Dramatic advances in our understanding of the pathogenesis of diabetes have led to the hope that diabetes can indeed be prevented Several major international collaborative projects have been initiated with this aim In this book an outstanding group of international scientists provide a broad outline of the advances in basic science which underpin these projects The book offers a clear comprehensive and up to date account for the interested clinician and scientist and will be invaluable as a reference book for those working in the field

**Pathogenesis of Diabetes Mellitus** Erol Cerasi, Rolf Luft, 1970 **Glucose Homeostasis and the Pathogenesis of Diabetes Mellitus**, 2013-12-24 Diabetes mellitus is a disease with tremendous health and economic burden A better understanding of how normal glucose homeostasis is maintained and the pathogenesis is important to identify new ways for diabetes treatment This book addresses multiple aspects of this area of research Written by experts in the field Informs on important topics related to the regulation of glucose homeostasis and the pathogenesis of diabetes mellitus a field of intense research interest Pathogenesis and Treatment of Diabetes Mellitus J.K.

Radder, H.H.P.J. Lemkes, H.M.J. Krans, 2012-12-06 In this book on diabetes mellitus both the pathogenesis and treatment of the disease will be discussed Pathogenetic studies have led to the distinction between type I and type II diabetes In type I hyperglycaemia is due predominantly to insulin deficiency in type II insulin resistance is more important Three pathogenetic factors are thought to play a role in the etiology of type I diabetes heredity viral infections and immunity There may be a relationship between these three aspects since genetic predisposition changes the susceptibility to viral infections and or the immunological defence against these infections Insulinitis ensues Auto immune processes initiated by this chain of events may contribute to the destruction of the B cells in the islets of Langerhans and diabetes may eventually follow This means that at the time of the sudden outbreak of the disease the destructive process has already been active for years

**Pathogenesis of Diabetes Mellitus** Erol Cerasi, Rolf Luft, 1970 *The Pathogenesis of Diabetes Mellitus - USSR* - S. Genes, Joint publications research service arlington va, 1960 Our ideas of the pathogenesis of diabetes mellitus have changed considerably during the past 40 years Our current concept results from the acquisition of new data on the role of the central nervous and endocrine systems in the pathogenesis of diabetes mellitus new data on the metabolic processes taking place in it and finally the elucidation of processes in the picture of this disease which attest to the injury to the organism in the absence of insulin and the reactions which characterize its control of the inflicted injury While 40 years ago it was considered universally accepted that diabetes mellitus develops basically as the result of pancreatic insufficiency it is impossible at the present time

to visualize the pathogenesis of diabetes mellitus without taking into account also the role of other endocrine glands especially that of the anterior hypophyseal lobe the suprarenal glands cerebral cortex and hypothalamus

**New Concepts in the Pathogenesis of NIDDM** Claes-Goran Östenson, Suad Efendic, Mladen Vranic, 2012-12-06 The pathogenesis of non insulin dependent diabetes mellitus NIDDM has attracted the interest of our group during the last three decades As early as 1969 a Nobel Symposium dealing with this topic was organized in Stockholm This was followed in 1987 by a Nobel Conference devoted to the same subject The main purpose of these meetings was to bring together the most distinguished scientists from all over the world and present theories on molecular and genetic mechanisms responsible for the development of glucose intolerance in NIDDM This idea was followed also in the present symposium New Concepts in the Pathogenesis of NIDDM organized with diabetologists from Toronto in Canada Our purpose is to biannually organize international meetings covering important aspects of diabetes research hoping that this type of interaction may result in new concepts and treatment alternatives For us participating in this symposium in September 1992 the meeting in Stockholm was very stimulating and innovative It is a special pleasure that almost all invited lecturers submitted manuscripts Thus the publication of the proceedings of the symposium makes it possible for all interested in diabetes research to share new ideas and findings presented at the meeting

Type 2 Diabetes Anca Pantea Stoian, 2021-09-22 Diabetes mellitus is a metabolic disease characterized by chronic high blood glucose levels Of the various types of diabetes type 2 diabetes is increasing in prevalence due to obesity aging sedentarism and other factors This book presents a novel approach to preventing and treating type 2 diabetes Chapters cover such topics as diagnosis pathogenesis management lifestyle and nutritional intervention and systems to support early diagnosis and prevention of prediabetes

**Autoimmunity and the Pathogenesis of Diabetes** Fredda Ginsberg-Fellner, Robert C. McEvoy, 2012-12-06 It has been a challenge for us to edit this volume of Endocrinology and Metabolism Progress in Research and Clinical Practice The topic of the pathogenesis of insulin dependent type I diabetes mellitus is particularly appropriate for this series since advances in this area have been made to a large extent by applying state of the art laboratory techniques to clinical samples Over the last several years a number of lines of evidence have been gathered suggesting that classic type I diabetes mellitus results from the autoimmune destruction of pancreatic beta cells in genetically susceptible individuals This hypothesis is particularly appealing because it offers a rational approach to the prevention of diabetes by immunosuppression We have tried to present a balanced authoritative summary of the information currently available to support the autoimmune hypothesis for the pathogenesis of human type I diabetes to place this information in historical perspective to include relevant information from animal models

of type I diabetes in which more invasive experimentation is ethical and finally to update the reader on the current status of attempts to intervene in the progression of diabetes with immunosuppressive drugs New York New York Fredda Ginsberg

Lefebvre, Daniel G. Pipeleers, 2012-12-06 Diabetes mellitus represents one of the most frequent and serious clinical syndromes in contemporary medicine Since the end of the nineteenth century the endocrine pancreas has been implicated in the pathogenesis of this disease Several pathologists of the twentieth century detected various lesions and morphologic alterations in the pancreatic islets of diabetic patients but the pathophysiological basis of their findings remained long obscure The systematic microscopic work of WILLY GEPTS clarified the views and related the variety in histopathology to differences in origin duration and clinical expression of the disease Over the past two decades the concept of a multifactorial origin of diabetes has become widely accepted Various agents and mechanisms have been identified which can lead to a quantitative or qualitative deficit in pancreatic B cells The purpose of this book is to bring an update on the many pathways which may induce an absolute or relative insufficiency in insulin release and hence a diabetic state Rather than bringing a complete account on all research relevant to the understanding of the pathology of the diabetic pancreas the authors of the various chapters of this volume have focussed on selected processes which can impair B cell function survival or regeneration
