Learning for Careers Nancy Hoffman, Robert B. Schwartz, 2020-01-15 Learning for Careers provides a comprehensive account of the Pathways to Prosperity Network a national initiative focused on helping more young people successfully complete high school attain a first postsecondary credential with value in the labor market and get started on a career without foreclosing the opportunity for further education It takes as its starting point the influential 2011 Pathways to Prosperity report which challenged the prevailing idea that the core mission of high schools was to prepare all students for college In response the Pathways Network was founded in 2012 to promote cooperative arrangements between educational and business institutions in order to fashion pathways for young people to acquire twenty first century skills and achieve professional success This book traces the evolution of the Pathways Network over the past five years focusing on the efforts of a diverse set of states and regions to build systems that span high school and the first two years of postsecondary education States such as Delaware and Tennessee have been highly effective in establishing systems designed to equip students with credentials valued in the contemporary labor market At the same time the authors acknowledge the technical political and cultural challenges in redesigning career focused education to produce satisfactory outcomes for young people throughout the country Learning for Careers offers a way forward for the millions of young people and employers that face a rapidly evolving and ever more competitive globalized workplace This book will be essential reading for all who have a stake in educational and economic opportunity in the United States

Bridging the Gaps James E. Rosenbaum, Caitlin E.

Ahearn, Janet E. Rosenbaum, Janet Rosenbaum, 2017-09-02 College for all has become the new American dream Most high school students today express a desire to attend college and 90% of on time high school graduates enroll in higher education in the eight years following high school Yet degree completion rates remain low for non traditional students students who are older low income or have poor academic achievement even at community colleges that endeavor to serve them What can colleges do to reduce dropouts In Bridging the Gaps education scholars James Rosenbaum Caitlin Ahearn and Janet Rosenbaum argue that when institutions focus only on bachelor s degrees and traditional college procedures they ignore other pathways to educational and career success Using multiple longitudinal studies the authors evaluate the shortcomings and successes of community colleges and investigate how these institutions can promote alternatives to BAs and traditional college procedures to increase graduation rates and improve job payoffs The authors find that sub baccalaureate credentials associate degrees and college certificates can improve employment outcomes Young adults who complete these credentials have higher employment rates earnings autonomy career opportunities and job satisfaction than those who enroll but do not complete credentials Sub BA credentials can be completed at community college in less time than bachelor s degrees making them an affordable option for many low income students Bridging the Gaps shows that when community colleges overemphasize bachelor s degrees they tend to funnel resources into remedial programs and try to get low performing students on track for a BA Yet remedial programs have inconsistent success rates and can create unrealistic expectations leading struggling students to drop out before completing any degree The authors show that colleges can devise procedures that reduce remedial placements and help students discover unseen abilities attain valued credentials get good jobs and progress on degree ladders to higher credentials To turn college for all into a reality community college students must be aware of their multiple credential and career options Bridging the Gaps shows how colleges can create new pathways for non traditional students to achieve success in their schooling and careers

Careers of Couples in Contemporary Society :

From Male Breadwinner to Dual-Earner Families Hans-Peter Blossfeld, Sonja Drobic, 2001-10-04

This is the first systematic international comparative study of the transformation of couples careers in modern societies The countries included are Germany the Netherlands the Flemish part of Belgium Italy Spain Great Britain the United States Sweden Denmark Poland Hungary and China Using longitudinal data this book explores what has and what has not changed for couples in various countries due to women s greater involvement in paid employment It provides evidence that despite substantial improvement in women s educational attainment and career opportunities in all the countries studied dimensions of role specialization in dual earner couples have not undergone transformation to the same extent Gender role change within the family has generally been asymmetric so that housework and childcare primarily remain women s work There are however also significant institutional differences among modern societies which determine a country s timing speed and

pattern of change from the traditional male breadwinner to the dual earner family model In particular the impact of males resources on their female partners employment careers is dependent on the welfare state regime In conservative and Mediterranean welfare state regimes women s paid employment is negatively correlated with the occupational position of their husbands In liberal welfare state regimes no impact of husbands resources on their wives labour force participation could be detected In the social democratic welfare state regime and generally in former socialist countries husbands resources have a positive effect on their wives employment so that occupational resources cumulate in dual earner families

Higher Education, Place, and Career Development Rosie Alexander,2024-11-21 Drawing connections between the findings of a research project following young graduates from the Scottish islands of Orkney and Shetland current international evidence and theoretical literature this book argues that understanding rural and island student transitions can expose the wider dynamics of place and mobility at play during student and early career experiences Highlighting the importance of a career perspective Rosie Alexander encourages readers to consider how career pathways develop across time and across transition points unsettling the notion of a straightforward transition through university into the workplace The book uncovers how student trajectories are developed through interweaving dynamics of relationships place and career routes and unpacks the implications for policymakers and practitioners It contends that a much greater spatial awareness is necessary to understand and support the educational and career pathways of higher education students This is a crucial read for higher education researchers policymakers and students interested in rurality as well as access to and transition from higher education
