Patient Recruitment In Clinical Trials:

Reinventing Patient Recruitment Joan F. Bachenheimer, Bonnie A. Brescia, 2017-03-02 During the last five years clinical research and development costs have risen exponentially without a proportionate increase in the number of new medications. While patient recruitment for clinical studies is only one component in the development of a new medicine or treatment, it is one of the most significant bottlenecks in the overall drug development process. Now it is imperative that industry leaders see beyond reactive measures and recognize that advancing their approach to patient recruitment is absolutely essential to advancing medicine and continuing the stability of their corporate brand across the globe. *Reinventing Patient Recruitment: Revolutionary Ideas for Clinical Trial Success* is a definitive guide to planning, implementing, and evaluating recruitment strategies and campaigns globally. The combined experience of the authors provides a depth of perspective and boldness of innovative leadership to set the standards for future patient recruitment programs and practices. This book is a must have for pharmaceutical, biotechnology, and medical device industry professionals concerned with enrolling for domestic and multinational clinical studies and remaining on time and on budget.

Analysis of Patient Recruitment Methods for Clinical Trials of Different Heart and Lung Diseases Oghenevovwero Vovwe Sido, 2018 Patient recruitment is key to the success of any clinical trial, as clinical trials cannot be conducted without the willful participation of subjects. However, clinical trial recruitment has always been a great challenge in clinical studies. This practicum project, conducted over an eight-month period, compares three different methods of subject recruitment into 2 clinical research studies conducted at the Heart Lung Transplant and Pulmonary Research Department of Baylor Scott White Research Institute, Dallas. The three recruitment methods are Physician Referral, EHR Screening, and Online Portals. We hypothesize that Physician referral is a more successful method for enrolling patients into clinical studies of different heart and lung diseases. A total of 333 potential subjects were identified via EHR screening or referred by physicians or signed up on the clinical trial portal to be contacted about the study. 108 patients were referred by

physicians 212 patients were identified via EHR screening and 13 patients signed up on the online clinical trial portal to be contacted for a study By comparing the method of patient recruitment into clinical studies we can ascertain what method works best in recruiting patients for clinical trials
