Handbook of Mobility Data Mining, Volume 2 Haoran Zhang, 2023-01-29 Handbook of Mobility Data Mining Volume Two Mobility Analytics and Prediction introduces the fundamental technologies of mobile big data mining MDM advanced AI methods and upper level applications helping readers comprehensively understand MDM with a bottom up approach The book explains how to preprocess mobile big data visualize urban mobility simulate and

predict human travel behavior and assess urban mobility characteristics and their matching performance as conditions and constraints in transport emergency management and sustainability development systems The book introduces how to design MDM platforms that adapt to the evolving mobility environment and new types of transportation and users This helpful guide provides a basis for how to simulate and predict mobility data After an introductory theory chapter the book then covers crucial topics such as long term mobility pattern analytics mobility data generators user information inference Grid based population density prediction and more The book concludes with a chapter on graph based mobility data analytics The information in this work is crucial for researchers engineers operators company administrators and policymakers in related fields to comprehensively understand current technologies infra knowledge structure and limitations Discusses how to efficiently simulate massive and large scale people movement and predict mobility at an urban scale Introduces both online detection methods which can sequentially process data and offline detection methods which are usually more robust Stems from the editor s strong network of global transport authorities and transport companies providing a solid knowledge structure and data foundation as well as geographical and stakeholder coverage

Activity Patterns in Small Mammals

S. Halle,N.C. Stenseth,2012-12-06 Environmental conditions change considerably in the course of 24 h with respect to abiotic factors and intra and interspecific interactions These changes result in limited time windows of opportunity for animal activities and hence the question of when to do what is subject to fitness maximisation This volume gives a current overview of theoretical considerations and empirical findings of activity patterns in small mammals a group in which the energetic and ecological constraints are particularly severe and the diversity of activity patterns is particularly high Following a comparative ecological approach for the first time activity timing is consequently treated in terms of behavioural and evolutionary ecology providing the conceptual framework for chronoecology as a new subdiscipline within behavioural ecology An extensive Appendix gives an introduction to methods of activity modelling and to tools for statistical pattern analysis

Correlated neuronal activity and its relationship to coding, dynamics and network architecture Tatjana Tchumatchenko, Ruben Moreno-Bote, 2014-12-03 Correlated activity in populations of neurons has been observed in many brain regions and plays a central role in cortical coding attention and network dynamics Accurately quantifying neuronal correlations presents several difficulties For example despite recent advances in multicellular recording techniques the number of neurons from which spiking activity can be simultaneously recorded remains orders magnitude smaller than the size of local networks In addition there is a lack of consensus on the distribution of pairwise spike cross correlations obtained in extracellular multi unit recordings These challenges highlight the need for theoretical and computational approaches to understand how correlations emerge and to decipher their functional role in the brain

Contactless Human Activity Analysis Md Atiqur Rahman Ahad, Upal Mahbub, Tauhidur Rahman, 2021-03-23 This book is a truly comprehensive timely and very much needed treatise on the conceptualization of analysis and design of contactless multimodal sensor based human activities behavior understanding intervention From an interaction design perspective the book provides views and methods that allow for more safe trustworthy efficient and more natural interaction with technology that will be embedded in our daily living environments The chapters in this book cover sufficient grounds and depth in related challenges and advances in sensing signal processing computer vision and mathematical modeling It covers multi domain applications including surveillance and elderly care that will be an asset to entry level and practicing engineers and scientists See inside for the reviews from top experts

Human Activity Recognition and Prediction Yun Fu, 2015-12-23 This book provides a unique view of human activity recognition especially fine grained human activity structure learning human interaction recognition RGB D data based action recognition temporal decomposition and causality learning in unconstrained human activity videos The techniques discussed give readers tools that provide a significant improvement over existing methodologies of video content understanding by taking advantage of activity recognition It links multiple popular research fields in computer vision machine learning human centered computing human computer interaction image classification and pattern recognition In addition the book includes several key chapters covering multiple emerging topics in the field Contributed by top experts and practitioners the chapters present key topics from different angles and blend both methodology and application composing a solid overview of the human activity recognition techniques
