

INDUCTIVE REASONING

Inductive reasoning is the process of deriving general principles or conclusions based on specific observations or examples.

DEFINITION

Inductive reasoning involves moving from specific instances or observations to broader generalizations. It relies on collecting evidence, patterns, or trends from the specific cases and using them to make probabilistic or plausible conclusions about a larger set of cases or the entire population.

EXAMPLE

"The sun has risen every morning throughout history; therefore, the sun will rise tomorrow."

This example showcases inductive reasoning by extrapolating from past observations of the sun rising to predict that it will continue to rise in the future.
