The Lever of Riches Joel Mokyr, 1992-04-09 In a world of supercomputers genetic engineering and fiber optics technological creativity is ever more the key to economic success But why are some nations more creative than others and why do some highly innovative societies such as ancient China or Britain in the industrial revolution pass into stagnation Beginning with a fascinating concise history of technological progress Mokyr sets the background for his analysis by tracing the major inventions and innovations that have transformed society since ancient Greece and Rome What emerges from this survey is often surprising the classical world for instance was largely barren of

new technology the relatively backward society of medieval Europe bristled with inventions and the period between the Reformation and the Industrial Revolution was one of slow and unspectacular progress in technology despite the tumultuous developments associated with the Voyages of Discovery and the Scientific Revolution What were the causes of technological creativity Mokyr distinguishes between the relationship of inventors and their physical environment which determined their willingness to challenge nature and the social environment which determined the openness to new ideas He discusses a long list of such factors showing how they interact to help or hinder a nation's creativity and then illustrates them by a number of detailed comparative studies examining the differences between Europe and China between classical antiquity and medieval Europe and between Britain and the rest of Europe during the industrial revolution He examines such aspects as the role of the state the Chinese gave up a millennium wide lead in shipping to the Europeans for example when an Emperor banned large ocean going vessels the impact of science as well as religion politics and even nutrition He questions the importance of such commonly cited factors as the spill over benefits of war the abundance of natural resources life expectancy and labor costs Today an ever greater number of industrial economies are competing in the global market locked in a struggle that revolves around technological ingenuity The Lever of Riches with its keen analysis derived from a sweeping survey of creativity throughout history offers telling insights into the question of how Western economies can maintain and developing nations can unlock their creative potential *The Essential Black Literature Guide* Roger M. Valade, 1996 Significant works of all time periods and genres are represented from Phyllis Wheatley's 1773 Poems on Various Subjects Religious and Moral to William Wells Brown's 1845 Clotel the first novel by an African American to Spike Lee's contemporary screenplay Malcolm X

The African Methodist Episcopal Church Dennis C. Dickerson, 2020-01-09 In this book Dennis C Dickerson examines the long history of the African Methodist Episcopal Church and its intersection with major social movements over more than two centuries Beginning as a religious movement in the late eighteenth century the African Methodist Episcopal Church developed as a freedom advocate for blacks in the Atlantic World Governance of a proud black ecclesia often clashed with its commitment to and resources for fighting slavery segregation and colonialism thus limiting the full realization of the church's emancipationist ethos Dickerson recounts how this black institution nonetheless weathered the inexorable demands produced by the Civil War two world wars the civil rights movement African decolonization and women's empowerment resulting in its global prominence in the contemporary world His book also integrates the history of African Methodism within the broader historical landscape of American and African American
