Polarized Radiation Of Circumstellar Origin Vatican Observatory:

The Physics of Star Formation and Early Stellar Evolution Charles J. Lada, N.D. Kylafis, 2012-12-06 The origin of stars is one of the principle mysteries of nature During the last two decades advances in technology have enabled more progress to be made in the quest to understand stellar origins than at any other time in history The study of star formation has developed into one of the most important branches of modern astrophysical research A large body of observational data and a considerable literature now exist concerning this topic and a large community of international astronomers and physicists devote their efforts attempting to decipher the secrets of stellar birth Yet the young astronomer/physicist or more advanced researcher desiring to obtain a basic background in this area of research must sift through a very diverse and sometimes bewildering literature A literature which includes research in many disciplines and sub disciplines of classical astrophysics from stellar structure to the interstellar medium and encompasses the entire range of the electromagnetic spectrum from radio to gamma rays Often the reward of a successful foray through the current literature is the realization that the results can be obsolete and outdated as soon as the ink is dry in the journal or the conference proceeding in which they are published

Photopolarimetry in Remote Sensing Gordon Videen, Yaroslav Yatskiv, Michael Mishchenko, 2006-03-02 Photopolarimetric remote sensing is vital in fields as diverse as medical diagnostics astrophysics atmospheric science environmental monitoring and military intelligence The areas considered here include radiative transfer dynamic systems backscatter polarization biological systems astrophysical phenomena comets and instrumentation Subtopics include observational information including determining morphology and chemistry light scattering models and characterization methodologies While this introductory text highlights the latest advances in this multi disciplinary topic it is also a reference guide for the advanced researcher

Mass-Losing Pulsating Stars and their Circumstellar Matter Y. Nakada, M. Honma, M. Seki, 2012-12-06 Editing the proceedings of a scientific meeting is not an easy task Sometimes people who give an excellent talk do not send the manuscript by the deadline However this time thanks to the punctuality of all the participants we have this excellent volume for the workshop on mass losing pulsating stars and their circumstellar matter prepared in time Almost all of the oral presentations including the summary are collected in this volume We regret that we cannot put in this volume a few posters that we failed to receive before the editorial work The workshop was planned as a small meeting with less than fifty attendants because the city of Sendai was far from the most of the active institutions However the number of submitted papers exceeded the SOC's expectation many interesting contributions had to be scheduled in the poster session Still the oral sessions were so tight that many participants might have felt frustrated for the shortage of discussions The organizers of the workshop have to apologize to the attendants for the inconvenience caused from such a happy underestimate about the size of the workshop

Polarimetric Detection, Characterization and Remote Sensing Michael I. Mishchenko, Yaroslav S. Yatskiv, Vera K. Rosenbush, Gordon Videen, 2011-05-29 As the need for

accurate and non invasive optical characterization and diagnostic techniques is rapidly increasing it is imperative to find improved ways of extracting the additional information contained within the measured parameters of the scattered light This is the first specialized monograph on photopolarimetry a rapidly developing multidisciplinary topic with numerous military ecological remote sensing astrophysical biomedical and technological applications The main objective is to describe and discuss techniques developed in various disciplines to acquire useful information from the polarization signal of scattered electromagnetic waves It focuses on the state of the art in polarimetric detection characterization and remote sensing including military and environmental monitoring as well as terrestrial atmospheric and biomedical characterization The book identifies polarimetric techniques that have been especially successful for various applications as well as the future needs of the various research communities The monograph is intended to facilitate cross pollination of ideas and thereby improve research efficiency and help advance the field of polarimetry into the future The book is thoroughly interdisciplinary and contains only invited review chapters written by leading experts in the respective fields It will be useful to science professionals engineers and graduate students working in a broad range of disciplines optics electromagnetics atmospheric radiation and remote sensing radar meteorology oceanography climate research astrophysics optical engineering and technology particle characterization and biomedical optics

Stellar Polarimetry David Clarke, 2009-10-30 Written by an experienced teacher and author this must have source for work with polarimetric equipment and polarimetry in astronomy conveys the knowledge of the technology and techniques needed to measure and interpret polarizations As such this monograph offers a brief introduction and refresher while also covering in detail statistics and data treatment as well as telescope optics For astronomers physicists and those working in the optical industry

Polarimetry of Stars and Planetary Systems Ludmilla Kolokolova, James Hough, Anny-Chantal Levasseur-Regourd, 2015-05-14 Summarising the striking advances of the last two decades this reliable introduction to modern astronomical polarimetry provides a comprehensive review of state of the art techniques models and research methods Focusing on optical and near infrared wavelengths each detailed up to date chapter addresses a different facet of recent innovations including new instrumentation techniques and theories new methods based on laboratory studies enabling the modelling of polarimetric characteristics for a wide variety of astronomical objects emerging fields of polarimetric exploration including proto planetary and debris discs icy satellites transneptunian objects exoplanets and the search for extraterrestrial life and unique results produced by space telescopes and polarimeters aboard exploratory spacecraft With contributions from an international team of accomplished researchers this is an ideal resource for astronomers and researchers working in astrophysics earth sciences and remote sensing keen to learn more about this valuable diagnostic tool The book is dedicated to the memory of renowned polarimetrist Tom Gehrels

Accretion-powered Compact Binaries Christopher W. Mauche, 2003-12-04 This book is a well edited and comprehensive survey of the current research in the field of low mass accretion powered compact binaries that is binary stars containing a

white dwarf neutron star or black hole as the primary star and a Roche lobe filling low mass as the secondary star These stars have reached a stage in their evolution where the transfer of mass from the giant phase onto a dwarf or sub dwarf star demonstrates many different aspects of physics The volume is essentially a complete analysis of these stars combining theory and observation and covering observations of low mass X ray binaries and both magnetic and nonmagnetic cataclysmic variables theories of stellar accretion novae and evolution of compact binaries

Extreme Ultraviolet Astronomy Roger F. Malina, 2013-10-22 The field of extreme ultraviolet astronomy will see two major satellite observatories to be launched in 1991 one by ESA ROSAT mission one by NASA EUVE mission These Proceedings discuss the potential for EUV Astronomy results from recent missions approved and possible future missions and new developments in EUV technology

Observatories in Earth Orbit and Beyond Y. Kondo, 2012-12-06 When I became President of International Astronomical Union Commission 44 for the triennial period 1985-1988 several members of the Organizing Committee and I agreed that it would be a good idea for our Commission to host a conference on observatories in space in view of their increasingly important role in astronomical research IAU Colloquium Number 123 Observatories in Earth Orbit and Beyond is the first colloquium sponsored by IAU Commission 44 on Astronomy from Space although Commission 44 has co-sponsored numerous colloquia and symposia in the past The past two decades have seen a flourishing of astronomical observatories in space Over a dozen orbiting observatories have opened up a new window on the universe providing hitherto unavailable data in the electromagnetic spectral range from gamma ray X ray ultraviolet to infrared and radio This has clearly demonstrated the crucial nature of astronomical observations from space The invited talks of present colloquium consist primarily of reviews of currently operating observatories in space future observatories that have been approved by sponsoring government or space agencies the launch systems of U S A E S A U S S R and Japan discussions of various orbits and sites such as the Moon and alternate approaches in designing space observatories Several panel discussions addressed those issues as well as the major unsolved problems of astronomy Contributed poster papers included descriptions of space observatories that are in planning stage

Scientific Drivers for ESO Future VLT/VLTI Instrumentation J. Bergeron, G. Monnet, 2013-12-21 This is the start of a long process to ultimately operate new advanced capabilities at Paranal that can keep up with the evergrowing need for larger and more complex astrophysical data sets A modern instrument represents a very significant investment in cash human resources and time Such a meeting gives us a precious yardstick to evaluate the competitiveness of 1st generation instruments and associated current and forthcoming proposals for 1st generation upgrades This is also crucial to orient the large research and development effort that will provide the very foundation on which 2nd generation VLT instrumentation can be built Finally it represents a significant step towards defining the hopes and goals for the future Extremely Large Telescope to come The first outcome of this meeting already in progress is outlined in the epilogue
