Extinction Laura Perdew,2017-09-15 Have you seen a dodo bird recently Do you have mastodons playing in your back yard Not likely these species are both extinct which means the entire population has died out More than 99 percent of all species or about 5 billion have gone extinct since life first formed on Earth 4 5

billion years ago Some of those species went extinct at the same time in an event known as a mass extinction What type of event could cause such a massive die off This is a question that scientists have asked for decades as they explore the causes of extinction In *Extinction What Happened to the Dinosaurs Mastodons and Dodo Birds* readers ages 9 to 12 learn about the scientific investigative work necessary to answer these questions and find the culprit behind mass extinctions Follow the scientists as they look at all potential reasons for extinction including asteroid impacts massive volcanic eruptions excessive gases in the atmosphere climate change and more Where do scientists find clues to help them answer their questions In rocks scientists travel the globe to excavate the evidence They look for fossils that might tell them what lived before an extinction and what lived after They also examine the chemical elements in rocks at the boundaries between geologic eras as well as the structure of rocks As they follow the evidence the pieces of the puzzle come together to form a clearer picture of events that happened millions of years ago whether it's an asteroid strike or a massive volcanic eruption Extinction is not just a thing of the past It is happening right now at a higher rate than is typical Because of this there is debate about whether or not the presence of humans on Earth is having the same effect as an asteroid strike or a massive volcanic eruption Are we currently experiencing the sixth mass extinction And if so what are the causes Can we stop it *Extinction What Happened to the Dinosaurs Mastodons and Dodo Birds* includes hands on activities and critical thinking exercises to encourage readers to consider humans role in the current extinction what we can learn from past extinction events and how they can be part of efforts to prevent extinction Hands on activities a fun narrative style interesting facts species spotlights and links to primary sources combine to bring the subject of extinction to life in a fun and engaging way **The Secret Lives of Dinosaurs**
