there is no doubt that by the mid I980s integrated circuit technology has advanced to such an extent that revolutionary advances in telecommunications are fostered by the introduction of new and poweiful DSP algorithms Actually DSP has been recently playing a major role in the development of telecommuni cations systems to name just one of the most widespread applications where this interaction has been most effective we may mention the use of intelligent DSP to improve the peiformance of transmission systems by allowing sophisticated algorithm to be implemented in radio transmitters and receivers for personal communications Other areas have equally benefited by the latest advances of DSP speech coding and synthesis speech recognition and enhancement radar sonar digital audio and remote sensing just to cite afew With this in mind when choosing the topic for the 7th Tyrrhenian Workshop on Digital Communications whose contributions are collected in this book we aimed at focusing on the state of the art and the perspectives of the interaction between DSP and telecommunications two disciplines that are becoming increasingly intertwined Although by no means exhaustive of all the applications of DSP to telecommunications we believe that the material presented in this book pinpoints the most interesting among them and hence it will be considered as a useful tool for investigating this complex and highly challenging field

Fundamentals of Electronic Imaging Systems William F. Schreiber, 2012-12-06 Image processing is a fascinating applications area not a fundamental science of sufficient generality to warrant studying it for its own sake In this area there are many opportunities to apply art and experience as well as knowledge from a number of sciences and engineering disciplines to the creation of products and processes for which society has an expressed need Without this need work in the field would be sterile but with it image processing can readily provide the interested scientist or engineer with a professioilal lifetime of challenging problems and corresponding rewards This point of view motivates this book and has influenced the selection and treatment of topics I have not attempted to 1 be encyclopedic this service has already been performed by others It will be noted that the word digital is not in the title of this book While much of present day image processing is implemented digitally this work is not intended for those who think of image processing as a branch of digital signal processing except perhaps to try to change their minds Image gathering and image display vital parts of the field with strong effects on image quality are inherently analog as are all of the channels and media now used or likely to be used in the future to record TV signals and to transmit them to the home **Digital Terrestrial Television Broadcasting Paul** Dambacher, 2012-12-06 In the past decades traditional television broadcasting has been an autonomous field which was largely independent of the world of telecommunications and computers The analog television standards PAL SECAM and NTSC have remained almost untouched with regard to their picture information Whatever development took place was essentially in support of programming and was based on the existence of a certain redundancy in the representation of the

signal in the time and fre quency domain In the 70S for example the teletext system was introduced throughout Europe A further supplementary digital service in television intro duced in the early 80S was the Video Programme System VPS which utilizes part of the TV data line and ensures that programmes can be recorded with the correct timing on video recorders even when the programmes are delayed There is no doubt that as far as the transmission from the studio to the view er is concerned the future belongs to digital video broadcasting DVB which is about to be implemented in the satellite cable and terrestrial radio transmission media The European DVB Project finalized its specification for channel coding and modulation for the digital broadband transmission channels at the begin ning of 1996
