Saturn The Rand McNally Library Of Astronomical Atlases For Amateur And Professional Observers:

Saturn James L. Martin, 2003 First observed by Galileo Saturn lies in the distant reaches of the solar system it is the sixth planet a gaseous giant between Jupiter and Uranus It takes its name from the mythological father of Jupiter and Roman god of agriculture Because of the famous circle of rings Saturn is one of the most well regarded occupants of the galaxy Despite their continuous appearance from Earth the rings are actually space dust and debris trapped by Saturn's gravitational pull a fact garnered from several satellite passes and telescope observations The origin of Saturn's rings however remains a mystery Apart from the rings we also are aware of its moon system with the most intriguing planetoid called Titan itself having been the subject of science fiction speculation as a home to life Saturn has been visited by Pioneer 11 and the two Voyager probes with Cassini slated to arrive in 2004 Our study of this most intriguing planet will continue into the foreseeable future with the hopes of resolving the mysteries it hides This book provides a thorough and interesting overview of Saturn from its initial observation centuries ago to the contemporary satellite flybys Anyone captivated by the mysteries of space and the wonders of Saturn needs to understand the background covered here After the overview is a substantial and carefully selected set of abstracts of literature pertaining to Saturn with easy access then given through author title and subject indexes

Saturn Garry E. Hunt, Patrick Moore, 1982-01-01 Discusses the latest theories and scientific discoveries about the planet Saturn *The Publishers Weekly*, 1982 *Books in Series*, 1985 Vols for 1980 issued in three parts Series Authors and Titles Saturn Garry Hunt, Patrick Moore, Millicent Trowbridge, 1984 Scientific and Technical Books and Serials in Print, 1984 The Publishers' Trade List Annual, 1985 **American Book Publishing Record**, 1983-04

Sky and Telescope Charles Anthony Federer, 1970 Jupiter Garry E. Hunt, Patrick Moore, Royal Astronomical Society, 1981 An atlas of Jupiter and its moons using photographs taken by the Voyager spacecraft and other new information about the giant planet Saturn and How to Observe It Julius Benton, 2007-04-03 Modern comprehensive review of the

formation astronomy and structure of Saturn and its ring system and observing techniques for amateurs Very latest detailed theories and physical descriptions How to observe and image the Saturn its moon and ring using a variety of telescope

apertures and magnifications **Saturn** Robin Kerrod, 2000-01-01 An introduction to the planet Saturn with information about its atmosphere rings and moons **The Hatfield SCT Lunar Atlas** Anthony Cook, 2016-08-23 In 2004 it became

obvious that Henry Hatfield's original atlas wasn't suitable for all current commercially made amateur telescopes Newtonian telescopes and astronomical refractors for many years the only choice for amateurs invert the observed image The standard Hatfield Atlas therefore follows the IAU International Astronomical Union convention of having maps and photographs with South at the top and West on the left an inverted image However the current ranges of Schmidt Cassegrain and Maksutov telescopes that's most of those manufactured by Meade Celestron and many others don't invert the observed image but

instead reverse it left for right That s with North at the top and East on the left Because of the way the human visual system works it is almost impossible to mentally mirror image a map to compare it with the view through the eyepiece so even turning an IAU standard atlas upside down doesn t help This new SCT version of the Atlas solves this problem for observers Identification of lunar features is made quick and easy The new digitally re mastered second edition vastly improves the clarity and definition of the original photographs significantly beyond the resolution limits of the photographic grains present in earlier atlas versions whilst preserving the layout and style of the original publications This has been achieved by merging computer visualized Earth based views of the lunar surface derived from NASA s Lunar Reconnaissance Orbiter data with scanned copies of Commander Hatfield s photographic plates using the author s own software The result is a The Hatfield SCT Lunar Atlas for 21st century amateur telescopes up to and beyond 12 inch aperture It contains all the features that made the original so widely used a combination of an index of all International Astronomical Union named primary lunar features and twelve chart areas help to locate any named lunar features of interest that can each be examined under typically five different states of illumination Close ups of interesting features are also included The new Atlas is supplemented by an introduction to its use a short description of the digital re mastering technique and a completely new section describing lunar observing techniques At the end of the atlas there is an index of all named features and crater diameters along with a summary table of the dates and times that the original Hatfield images represent
